Tell the lumberman that he will save from one hundred to two hundred dollars a carlot on lumber shipped by way of the Panama Canal, or the grain dealer that ocean shipments for wheat mean a saving of one to ten, or the housekeeper that the Panama route for fruit means a saving of fifty cents on every box, and—oh, yes!—they wake up to the fact that Panama means as much to the inlander as to the harbortown dweller. When a steamship company has shipped—not promised to ship or planned on paper to ship—has shipped a ton of freight by sea from San Francisco via Panama—breaking bulk as yet—across the Gulf and up the Atlantic Coast to Savannah; and there, breaking bulk again, has reshipped by sea back to New Orleans and up to St. Louis, practically covering a distance one and a half times greater than that covered by the railroad and handling the freight three times oftener than the railroad, and yet has saved, as against the rail rate, one dollar a ton—you do not need to persuade the inland shipper that Panama affects him. If you want details of such shipments write to the California Atlantic Line or the American Hawaii.

Lily Pads or Ocean Liners?

IF I WERE quite sure that headquarters would not order the lid shut down tight I should not be afraid to refer you for similar examples of saving to three of the big railroad systems, with allied steamship companies, which are now putting on big freighters via Panama.

A year ago—even six months ago—Panama elicited a covert sneer about "the lily-pad" business; but recently the lily-pad business has been eclipsed by rush orders for the building of steamships.

"Will you excuse me for saying that all this talk of preparation for Panama is absolute rot and hot air?" demanded a railroad man of a steamship builder. "The railroads built up and developed this country, and they deserve consideration from the public for it; and transportation rates—ocean or river—must be essentially based on rail rates."

"And will you excuse me for telling you," answered the steamship builder, "that the very railroad of which you are the humble servitor and which owns the controlling stock in one of the largest ocean combines has just ordered several of its best vessels—not built abroad—placed under the American flag so that they can participate in free tolls for Panama if free tolls are granted American ships? And will you let me add that the very railroad that twenty years ago spent millions in strangling Panama traffic is today spending almost the same amount building big liners for Panama? Another railroad has announced, with the approval of its directors, that it will ship its quota of Western grain via Panama. Rot or hot air or what-not, my friend, we are entering on a new era; and you wake up to it! There is not a shipping center in America that is not alive to a new current in the affairs of transportation. If Panama steerage traffic places thirty million immigrants from the south of Europe on the Pacific Coast where today there are only three million people, or twenty millions in the Gulf states where today there are only two millions, the railroads are not going to object or lose out. They are going to shoot more lines straight down toward Panama as fast as they can build them. Those are some of the things that are happening."

The steamship man is right. Within the first month of 1912, three big railroad systems announced ships for Panama. The two largest steamship companies in Germany ordered vessels built for Panama traffic. An emissary of the French government came to America to inquire as to tolls and coal at Panama, because the subsidized ships of his country intend to use it in preference to Suez if the cost be not greater. The most conservative section of the English press has openly come out with the statement that Panama means a division of Suez traffic if not a diversion of world traffic. Every board of trade and chamber of commerce in every shipping center between the Mississippi and the Atlantic has come out with some expression as to the best policy for Panama. Forty years ago, railroad development changed the face of America by moving manufacturing and shipping centers from the East to the Middle West. What is this new current in affairs going to do to the map? West and East, Middle West, North and South are interested in Panama; but what has this to do with fuss and feathers over a merchant marine? What has the merchant marine to do with the average man and woman? How has the merchant marine anything to do with a present of a billion a year to foreign nations?

Begin with the cost of Panama!

Including the first outlay—construction—the loss of running a Panama steamship line to counter-reach the extortion of a Cement Trust allied with a line of freighters, Panama totals close on to four hundred million dollars.

Who is going to use it?

Shall We Give Away a Billion?

TODAY the United States carries only nine per cent of its own ocean commerce! Foreign vessels carry ninety-one per cent. In 1810, when the Republic was young, the United States carried ninety per cent of its ocean commerce. Today it carries only nine per cent!

In 1810, when the United States had only seven million people, it had the second largest clipper fleet in the world. Today, of steamers, among the maritime nations of the world, it has almost the smallest fleet.

In 1810 the United States tonnage in foreign trade was nine hundred and eighty-one thousand. Today it is one hundred thousand less.

But, you say, the United States coastal vessels will benefit from Panama. That depends on Panama tolls; and not a tenth of the coastal lines will go through Panama! To date, only five regular coastal lines have announced an intention of using Panama. The other coastal lines have short runs—Boston to Maine, New York to Rhode Island, and so on.

Who, then, is going to benefit from the four hundred million dollars spent on Panama? The whole country, of course, in lowered freights; but, if no tolls are charged, isn't that four hundred millions a free gift to all the maritime nations? And if you charge tolls what becomes of the benefit to the whole country through lowered freights?

Because the United States has not a merchant marine to use Panama, there is the first part of your billion-dollar present to foreign nations!

Take the ocean carrying trade next—ninety-one per cent of American commerce carried by foreign ships.

Digitized by Google

When the Merchant Marine Commission held its hearings in 1904-5 it was carefully figured that the United States was paying to foreign shipowners, in freight, passenger fares, brokerage and wages, from one hundred and fifty million dollars to two hundred million dollars a year. Since that date rates have gone up and exports increased; and Lewis Nixon, who is one of the best-informed ship-builders in the world, declares that the total now paid foreign companies amounts to three hundred million dollars a year—a payment that has to be made in gold, for which there is no return from Europe. It was Mr. Nixon who designed so many fine war vessels and liners that the Cramps used to pay him ten thousand dollars a year for just one day's consultation a week. He it was who was summoned by the Czar to rebuild the Russian navy with American helpers after the war with Japan.

There is your second present to foreign nations—three hundred million dollars a year paid in gold!

Next take your rivers and harbors! For fifty years the United States has been deepening harbors, dredging channels, putting up lighthouses, establishing life-saving service. That has cost two hundred and sixty-one million dollars for the rivers and harbors alone, or for the total service another three hundred million dollars to 1904. To date, the total is given as five hundred million; but take the lower figure.

What Has Destroyed Our Merchant Marine

WHO gets the benefit of that three-hundred-million-dollar outlay? I know of one magnificently equipped pier that has lain deserted for twelve years because there were no American ships to use it. Who gets the benefit? Again the answer: ninety-one per cent of United States commerce carried by foreign ships—only nine per cent by American! The coastal ships, which are purely American, get the benefit of improved harbors; but the total number of coastal ships is only one-eighth of the total number of foreign ships using those same harbors. Put eight foreign ships in a row, and one little United States ship at the tail-end of the procession, and you have an exact representation of how the benefit of that three hundred million dollars on harbor improvements is distributed.

Your total present to foreign nations is now four hundred million dollars plus three hundred millions plus three hundred millions—or a free-for-all, take-it-all billion! No harm in giving it away! Very kind of Uncle Sam to give foreign nations practically the face value of the capital of the Steel Trust, three times the annual cost of army and navy, one and a half times the value of the best wheat crop America ever had!

He does not give it away because he wants to. He gives it away because he thinks he has to—to have his exports distributed to the markets of the world. His Panama outlay he can pay in United States currency, also his harbor-and-river outlay; but the three hundred million dollars for ocean traffic must go abroad in pure gold; and every time that gold goes out and does not come back—as Lewis Nixon points out—a shiver goes through all American banks! Money is tight. The rate on loans goes up. The merchant, the real-estate man, the builder, the manufacturer—who may need loans to keep business going—each and all feel the squeeze of that foreign tax on American commerce.

That is what your present, your bonus, your free-for-all, take-it-all gift to foreign nations means to the everyday business man. That is how the merchant marine or lack of a merchant marine concerns the inland as sharply as it concerns the shore front.

There are two other sides to this lack of a merchant marine worth considering, especially by the manufacturer and his helpers, about whose "empty dinnerpail" the politicians howl before elections. In every big ship are the products of from two hundred to three hundred factories—iron, steel, dynamos, lumber, furniture, rope, and so on. When ninety per cent of American commerce is carried in foreign vessels those two hundred to three hundred factories are humming—not for the United States but for foreign countries. That is where the lack of a merchant marine touches every workman as well as the manufacturer.

The other point was brought out by Mr. Winthrop Marvin, when the Marine Commission was taking evidence.

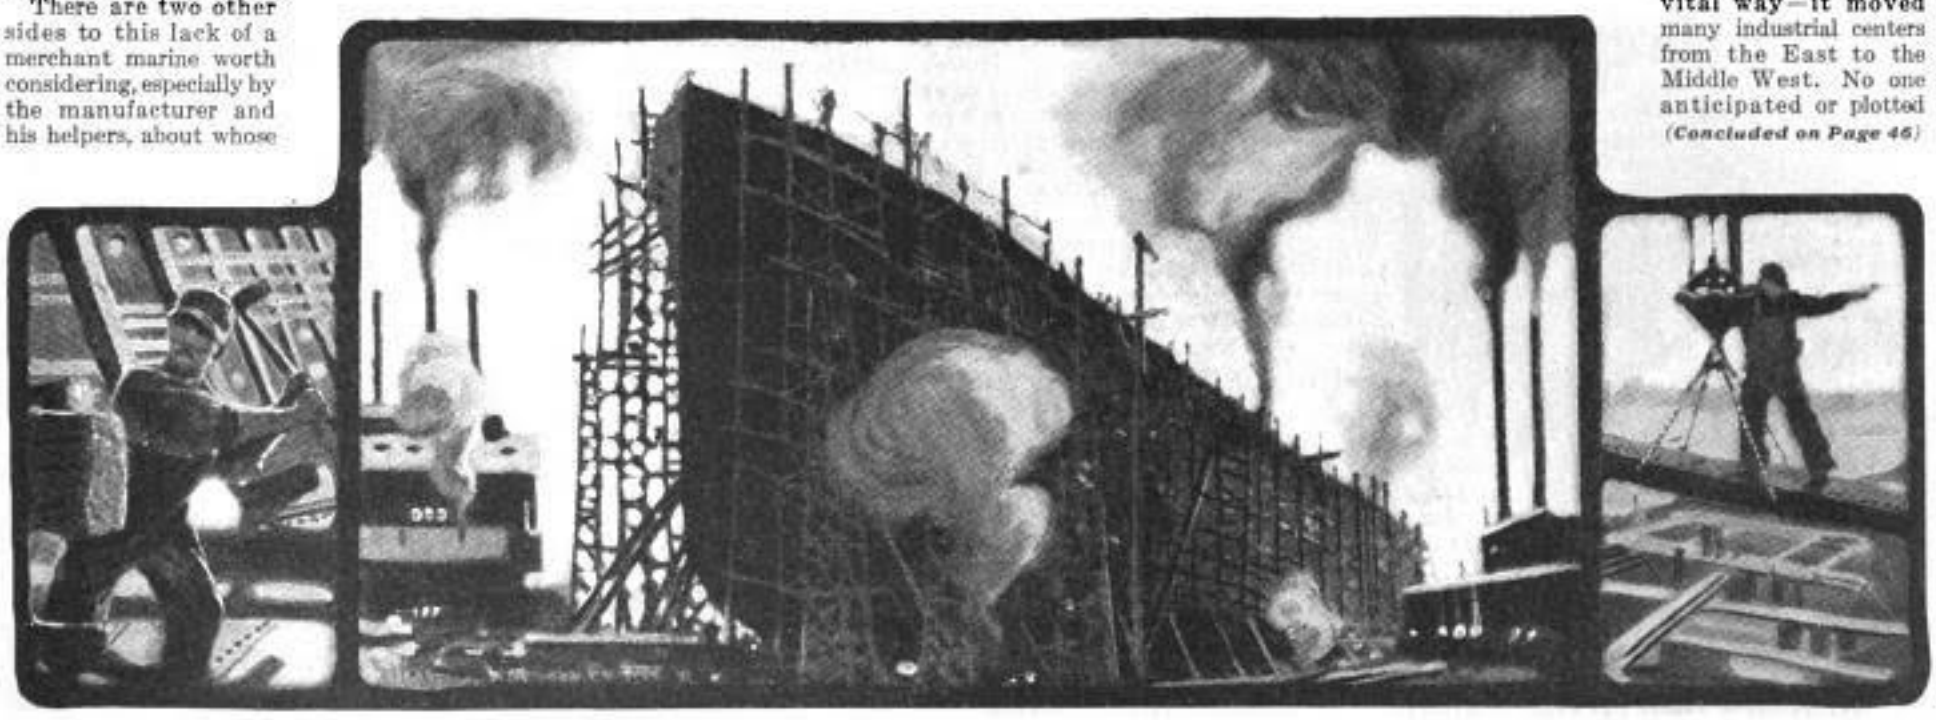
"America has reached the stage where her commercial supremacy will depend not on developing a vague West but in finding markets for all she raises and manufactures," the Philadelphia agent of a foreign line had declared. "Her problem is now one of marketing abroad; and how she succeeds will depend on whether she walls herself away from other nations, as China has, or enters on the great traffic of world commerce."

"All right," said Mr. Marvin. "We'll say it is like a case of two big department stores delivering goods to the same customers. How long do you suppose Mr. Bawnamaker would stay in business if he had all his goods delivered in Mr. Racy's delivery carts? That is exactly what we are doing in our world commerce. We have the goods, and we are letting the other nations deliver them to the world market."

There is a lot of untold as well as untellable history about the lack of an American merchant marine. Mr. Root could tell some of an occasion when he went to South America as a Government emissary and had to be sent in a man-of-war; otherwise it would have been necessary for a Secretary of the United States Government to go to Europe and take passage in a foreign vessel in order to reach one of the nearest neighbors of the United States! Things are not quite so bad now. Though no purely American ships run down the west coast of South America, six lines sail from United States ports to the east coast of the southern continent. Of these six, at time of writing three are foreign; but there are plans for more American vessels.

A hundred years ago the United States had the second largest merchant marine of the world—a clipper trade that scoured the seas, explored the Pacific, brought the wealth of the Orient to Boston and Salem, discovered the Columbia River—and so laid the foundations of empire in the Pacific states. Today the United States has almost the smallest marine of the world.

When you come to ask the cause of the decline and what swept the ocean highways of the American flag, you are given as many reasons as there are men. Mr. Roach, twenty years ago one of the famous builders and owners of the old liners, was asked by the Secretary of the New York Board of Trade what he thought caused the decline. "Too many laws and bad laws," he answered at once. "Laws that hamper the shipmaster, who is American, in competition with one who is foreign: laws as to food and duties; what bells to get up by and what bells to go to bed by—anything, in fact." It may be stated here that another such law is now before Congress, whether good or bad, regulating duties and privileges of American seamen. "Why, if I could build my ship at the same low cost as the Englishman or the German," declared Mr. Roach; "if I officered my vessel with the same crew as the foreign ship—which I could not as the laws now stand—and if I treated the seamen just as England or Germany treat them on their vessels, I would have a mutiny before I got the ship across the bar from New York. Why? Oh, food, length of watch—anything! 'Well,' I might say, 'isn't this treatment better than you get on the German or the English or the Norwegian ships—easier service, higher pay?' 'Yes,' they would say; 'but this is an American ship!' And there they would have me; for the law says thus and so. Too many laws—laws like the old sumptuary laws that hurt European cities in the Middle Ages!"



Not enough laws, practically says Mr. Lewis Nixon. "Our early shipping laws were effective; and, until suspended, they safeguarded and fostered ship-owning and ship-building. No one who has traced the rise and fall of our sea-going fleet can question the efficiency of a return to the policy which gave the fleet beginning and healthy growth. . . . Our foreign rivals know that general subsidies will not help us. . . . If any one wishes to see a general alarm sounded among foreign steamships just mention discrimination in customs duties and differential tonnage taxes. . . . Statesmen of Europe know the most dreaded policy upon which we could enter is the right to regulate commerce with foreign nations, which we suspended in 1828. . . . The one thing at all hazards is to prevent a preference for our own ships; for that preference built up and nourished a marine adequate to our needs and would do it again. . . . A discrimination was"—formerly—"made by allowing a duty of ten per cent less on goods imported if brought in American bottome. Differential tonnage taxes were provided—six cents a ton on American vessels, thirty cents a ton on American-built and foreign-owned vessels, and fifty cents a ton on foreign-built-and-owned vessels. The Asiatic trade was secured by grading duties on tea far higher in foreign vessels than in American. American registry was confined to American-built vessels. In seven years our shipping increased three hundred and eighty-five per cent, and by 1826 we were carrying ninety-three per cent of our foreign trade under the American flag. But in 1828, by a crowning act of unwisdom and mistaken legislation, we threw open our indirect trade—trade with a nation with ships not under that nation's flag. This brought about the decline of our merchant marine."

The Decline of the Boston Clipper

"DO YOU think it was the removal of discriminatory duties against foreign ships that caused the decline of the merchant marine?" was asked of Mr. Bancroft, one of the new harbor commissioners of Boston, who are launching comprehensive plans to restore Massachusetts' ascendency on the sea.

"That whole question of discriminatory duties is in dispute. It may or may not have been one of the causes why the American flag disappeared from the sea. There were many causes. Consider for a moment: In the old days, when Boston clippers and Salem ships covered all the seas of the world, the sailing vessel was the only means of transportation. From Maine to New York we had the shipyards, and we had the timber, and we had the skilled laborers, and we had the enterprise. The wealth of the world was carried in American ships. We supplied European nations with vessels and had the second largest sailing fleet on the sea. Then came the use of steam and iron—especially iron. Contemporaneous with the use of iron were our Civil War and the opening of the West and the railroad development that absorbed all idle capital. This gave England the start as a ship-building nation; and by the time the Civil War was over our flag had all but disappeared from the sea. Then it paid the very Boston merchants, who used to have the clipper service here, better to invest their money in railroad development than in vessels. Their capital earned more—doubled over night as it were. Then the development of the railroads and the West reacted in another very vital way—it moved many industrial centers from the East to the Middle West. No one anticipated or plotted

THE WORD GENTLY SPOKEN

In Which Mr. Bill Moggins Takes a Hack at the Amenities

By KENNETT HARRIS

ILLUSTRATED BY H. T. DUNN

THE hollow echoes of the McGonigal Fireproof Apartments never had much time for sleep, having an environment of much concrete and iron-pipe railing and a voluble and vociferous tenantry; but they were enjoying a brief period of repose when they were suddenly awakened to reverberating clamor by the foot of Mr. Bill Moggins, *au troisième*. Mr. Moggins had mislaid his door-key and, being of an impetuous and peremptory disposition, the course of action that naturally suggested itself was to kick the lower panels of the door with an energy that threatened to break them in, commenting on doorkeys the while in a rumble of more or less palliative profanity.

Bill Moggins was broad of build, and the one inch of celluloid collar that he wore in compromise of the company's linen regulation covered his neck space to the angle of his prognathous jaw and the shaved line of coarse black hair at his nape; his forehead was low, his nose bent slightly askew and his eyes were small and angry in their expression.

When a person of this description kicks at a door with a familiar kick there is likely to be a prompt response from those within. Mrs. Moggins appeared promptly—a small, rather untidy, but not uncomely woman, who seemed less subdued than might ordinarily have been expected.

"What's your rush?" demanded the lady, with some asperity. "Anybody chasin' you? I tell you, Bill, we're a-goin' to have trouble with the landlord if you get to makin' that racket in the halls."

Her husband deigned no response beyond a grunt as he pushed his way to the kitchen. Here he stopped and looked round with a particular regard for the table, which was bare but for its covering of clean and gayly patterned oilcloth.

"Ain't supper ready yet, for Pete's sake?" he asked savagely. "Whatcha bin a-doin' all day?"

"I've bin a drivin' in the park with the poodle in a taxi!" retorted Mrs. Moggins. "Then I come back an' laid down on the sofy while my hired gell done up my hair. That's the way I put in my time—ain't it? I ain't had no week's washin' on my hands nor nothin'. Cert'nly not! What's eatin' you, Bill?"

"You get a royal American wiggle on you with that there grub an' close your trap," said Bill, with an ominous roll of his bullet head. He slouched into the bedroom, removed his shoes, sent his celluloid collar clattering on the floor and then stretched himself on the bed and stared gloomily at the wall paper over the bureau. He lay quiescent for perhaps ten minutes and then raised his voice to a roar.

"Say, you! Are you goin' to be all night with that there supper?"

"If you feel like you was a-goin' to have a fit say the word an' I'll go tallerphone for a doctor," floated back from the kitchen. "Supper's goin' to be ready when it's cooked an' set on the table."

"I don't want no back talk from you!" shouted the man. "What I want is grub; an' it'd better be ready in about a minute or I'll come out an' see if I can't hurry it up."

There was no reply to this; but in a little more than the stipulated time the corned beef and cabbage and potatoes were steaming odoriferously through the apartment and Mr. Moggins drew his chair to the table and squared his elbows for action.

"Them taters is overdid," he remarked gruffly, as one of the jacketed tubers fell apart from his fork. "You couldn't bile water without burning it—you couldn't! Nice mess to set afore a man when he comes home tired an' hungry after a hard day's work! You must 'a' thought you was makin' tater soup. Fierce! Taters overdid an' cabbage underdid, an' the corned beef neither one thing nor the tother!"

"Seems like, among the three, you'd find one cooked the way you like it, Bill," remarked his wife pleasantly. "Why not converse about that?"

"Why not keep your mouth shut?" said Bill, glaring at her.

"Because I can't do that an' chew my victuals," she answered placidly.

"If you'd quit chewin' the rag ——" said he.

His wife smiled covertly as he reached for another of the mealy potatoes and copiously butterined it. There was something fond and half maternal in the smile—the expression at once tolerant and benignant that the manifestation of a ravenous appetite in mankind ever calls to the face of woman. From time to time she urged him to greater exertions, forking choice morsels to his plate, refilling the cup that he noisily emptied, and finally bringing on a quarter section of pie for his especial delectation.

At last Mr. Moggins gave his plate a forward impulse that shot it to the middle of the table and drew the back of his hand across his mouth.

"Ha!" he sighed.

"Had a good supper, Bill?" asked Mrs. Moggins.

"I've filled myself up if that's what you mean," growled Bill. "That ain't a-sayin' I've had a good supper by a jiggered sight."

"Had a hard day?"

"I don't never have anything but a hard day—do I? Whatcha askin' fool questions for? Yes, I've had a hard day," he continued bitterly; "and I come home an' I find myself locked out of my own house an' have to wait round half the blessed evenin' to get a bite to eat, by cripes! I've got a peach of a woman, I have!"

"I'm glad you reelize it, Bill," said the lady. "An', now you've got all that off your chest, let's have the rest of it. You don't need to tell me you ain't got a grouch about somethin', because I can tell it on you every time. It ain't the hard day an' it ain't because you had to wait ten minutes for the eats. I s'pose you've been pinched again."

"That's a lie!—an' you know it," denied Mr. Moggins. "I wasn't pinched again."

"Then what was it?"

Her husband considered, eying her gloomily. At last the necessity of sympathy opened his lips.

"We've gotta be perlite," he blurted out.

"What?"

"Gotta be perlite. Say, whatcha know about that!" He fumbled in his pocket and brought forth a creased and dirty slip of printed paper. "There it is. General order 36,983—as if 36,982 of 'em wasn't enough. Read it, blame you! Whatcha twistin' it round in your hand like that for?"

Mrs. Moggins smoothed the paper out and calmly read aloud:

"Conductors and all other employees of the company are particularly instructed to observe, under all circumstances, a polite and gentlemanly demeanor toward the patrons of the lines and the public generally. Any infraction of this rule will be punished by instant dismissal from the company's service."

"He Left the Platform Five Times to Assist Those Whose Infirmities or Tender Age Required Assistance"

"The Pink of Politeness, the Perennially Blooming Crocus of Courtesy is, Beyond Cavil or Question, Conductor William Moggins"

"Whatcha know about that!" repeated Mr. William Moggins in tones of the deepest surprise and disgust.

"Well, Bill."

"Huh?"

"Bill."

"Spit it out."

"Why not be perlite, Bill?"

II

FOR a full half minute, Bill Moggins glared at his spouse across the supper table. She sustained the glare with smiling equanimity. "I guess you don't understand," he said at last. "We've gotta be perlite—see? 'Under all circumstances'—understand?"

"I gotcha," responded Mrs. Moggins. "What I say is, why not be perlite?"

"You're nutty!" said the man. "Ain't we got enough to do without that? This here means we've gotta say 'If yer please!' an' 'Thank yer!' An' if they hand us any slack we've gotta take it. I've got a pitcher of muhself, life size an' lookin' pleasant, when some mutt gets gay and starts in to bawl me out. Sure! Well, I lose me job—an' then where'll we be? Stringin' along in the bread line. Ain't it enough to make a guy sore? An' you sit there stretchin' your face like a blinky-bashed chessy-cat!"

Mrs. Moggins was undismayed—unperturbed even.

"That's all right," she said. "I know it ain't a-goin' to be easy for you at first; but, after all, 'tain't nothin' but a habit. You practice it on me. I'll learn you."

"Where in blue blazes did you hide the paper?" demanded Moggins, with an air of dismissing the subject.

"Say: Excuse me for interruptin' of you, muh dear, but would you mind tellin' me where the paper is?" corrected Mrs. Moggins calmly.

Moggins opened his mouth for an apposite remark, and then closed it. Gradually he allowed his stern and gloomy features to relax into what was really a creditable grin.

"Pahdun me, muh dear," he said. "If it ain't troublin' you too much would you be so kind an' condescendin' an' obligin' as to tell me?"

"Don't spread it on too thick, Bill," cautioned his wife. "I might think you was just a-kiddin' me. Sure, I'll tell you. 'Tain't no trouble at all. You're a-settin' on it."

"What in the ——"

"Cut it out. Just say Thank yer, an' let it go at that."

"Thank yer."

"Fine an' dandy!" said Mrs. Moggins approvingly. "You're a-doin' elegant!"

Mr. Moggins took up his paper and, dragging a rocking-chair to the stove, seated himself comfortably, with his feet on the oven shelf. For a while he followed his usual custom of droning brokenly through the lurid headlines of the journal: "Ser-ci-ety Bird—Bud See-Seeks Sui-cide. Bank-er Bolts—Bolts—With Boo-dle." Then a muttering of the text; but, before his wife had completed her dish-washing, he was staring blankly at the page, his lips twisted

Digitized by Google

into an odd expression of amusement, and now and then he emitted a chuckle to which his wife paid no sort of attention.

Presently Mrs. Moggins stacked her last dish and settled down to the darning of her lord's socks, and her husband resumed his recital of the day's events. Once or twice he made his own free and frank criticism of some happening, but almost instantly modified it at his tutor's suggestion. Once, in turning a page, he upset the work-basket and began ferociously to inquire what in several things the basket was doing at his elbow.

"If I wasn't a lady I'd call you a clumsy, cross-eyed hipperpotermus, an' ast you why you couldn't handle your arms as if you was used to havin' 'em," remarked Mrs. Moggins calmly. "Bein' a lady, I merely requests an apology for your orkerdness. I ain't sayin' nothin' about your langwitch, mind. Take your time, Bill, an' think up suthin'. Want me to tell you what to say?"

Her husband looked sullen for a moment, but again he succumbed.

"'Scuse my orkerdness," he begged. "I wasn't a-noticin' that there basket of yours. I cert'nly ought to be more keerful; an' I hope you'll overlook it."

"Don't name it," smiled Mrs. Moggins agreeably.

The crowning urbanity, however, came a little before the hour of retiring, when Moggins came from the bedroom, his coat slung across his arm.

"Muh dear," he said, "I hate like blazes to put you to the ill-convenience; but I was misfortunate enough to bust a button off this here coat while I was a-stoopin' to pick up a dime what a fat slob of a woman dropped an' couldn't pick up for herself—darn her! If I might p'soom on your kindness so fur as to ast you to feel in the pocket for the button an' sew it on, I'd take it as a partickler favor."

At that, Mrs. Moggins threw her arms about her husband.

"Bill," she cried enthusiastically, "you'll have the whole bunch beat! I didn't think you had it in you."

III

IN THE old, mad days, when Mr. Moggins heard the chimes at midnight, in a manner of speaking, he had "taken in" a Chinatown josshouse and there received an indelible impression. Before his disgusted eyes a blue-bloused heathen had stood, bent almost double, swinging his clasped hands in abject and shameless propitiation of a whiskered effigy in gilt and vermilion.

"Let's get out of here," the sturdy American had said to his companion. "This makes me sick to muh stummick!"

Now the "underdid" cabbage may have been a basic cause or it may have been the natural condition of his mind after the shock of general order 36,983; but, whatever it was, Mr. Moggins dreamed that he was swinging his arms pendulumwise in an agony of supplication before that very joss, who glared upon him, nevertheless, with inexorable and terrifying severity. Suddenly it seemed as if an iron hand gripped his bull neck and forced him prostrate, rubbing his twisted nose in the dust before the idol. Then the alarm clock went off.

"Land!" gasped Moggins with vast relief as he extricated his face from the pillow and hazily realized his familiar surroundings. In a revulsion of feeling he nudged his wife ungently in the ribs. "Hey, you!" he said. "Are you a-goin' to get up an' hustle breakfast any time today?"

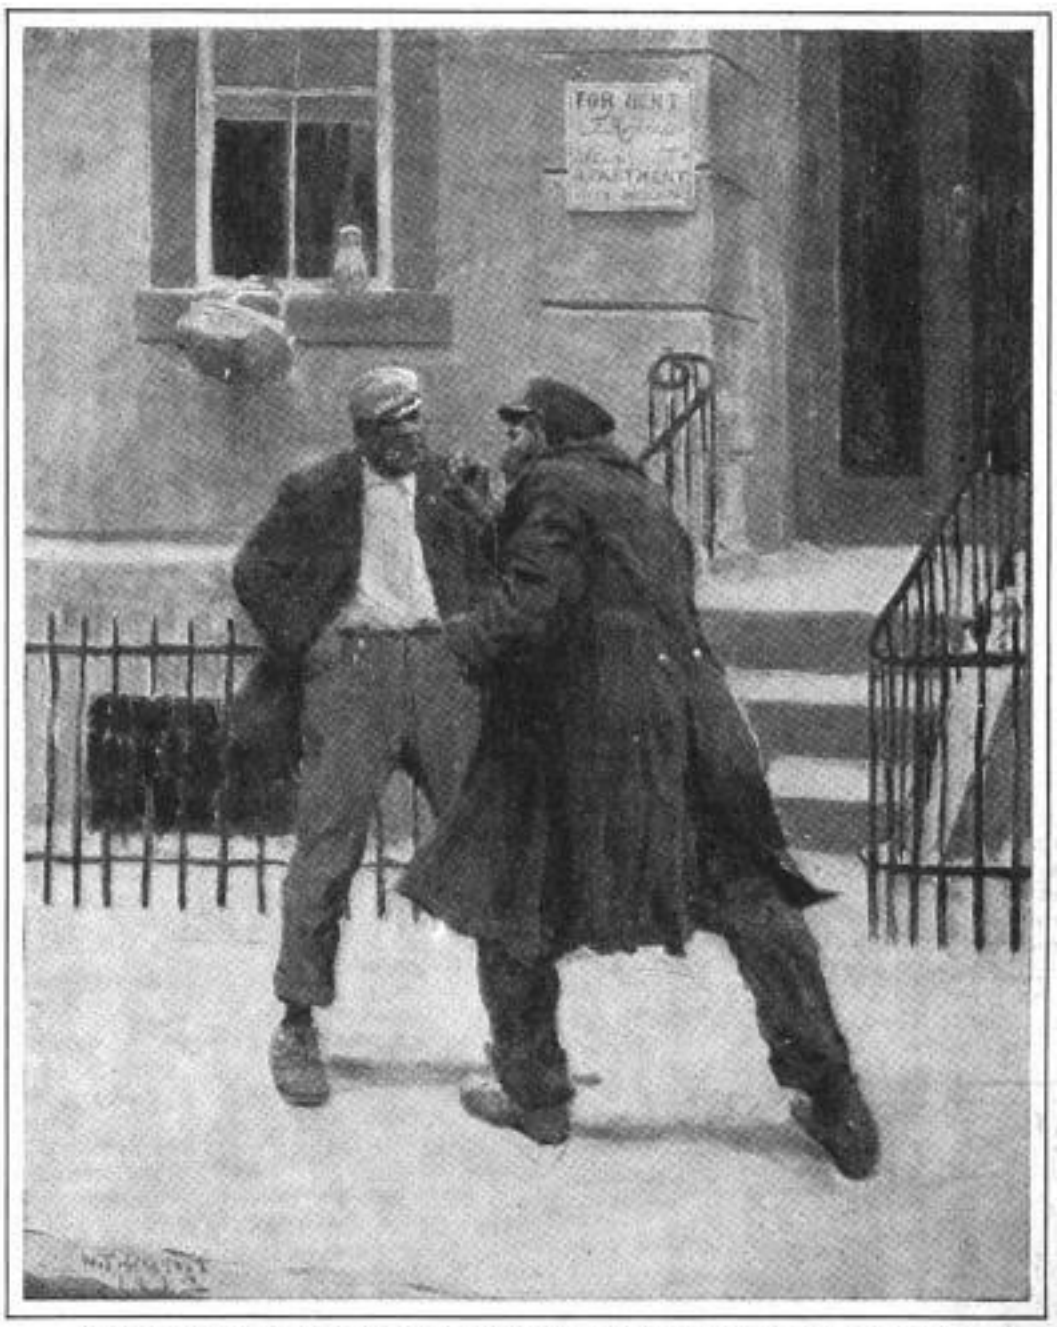
Mrs. Moggins yawned cavernously and slid from the bed before realization came to her; but, as she twisted her hair into its matutinal knob, she voiced a mild reproof.

"Some of these days you'll get a swipe in the map with the heel of my shoe, actin' up like that, Mr. Bill!" she said. "An' that ain't no way to be perlite either. Try it oncet more."

The vision of the Chinaman was strong upon Mr. Moggins yet; but, seeing that Mrs. Moggins had suspended her toilet pending correction, he made a heroic effort.

"I'll be erbliged to you if you'll get that breakfast started, Angel-Face," he said.

"That's good," observed the lady succinctly.



There was no further lapse during breakfast; and, after the mollifying influence of coffee, Moggins even went out of his way to exercise his new vocabulary and later bade his wife adieu in terms almost gallant. Mrs. Moggins returned his courtesy in kind; but as the sound of his shoes ceased to echo through the concrete halls she shook her head forebodingly and sighed. For the rest of the day she alternately sighed and fell into fits of giggling that bordered on the hysterical. Toward evening, however, the giggles became less frequent and the good woman's feeling of anxiety deepened. After all, a job was a job and its loss would be a serious matter. Bill was a good provider, but the provision had never extended to the morrow; and, with clouds gathering thickly on the horizon, there was nothing laid up for the rainy day. Could Bill stick it out? That was the question.

"Pore man!" murmured Mrs. Moggins; "his bark is a sight worse than his bite—but there ain't no denyin' that a stranger would think there was a-goin' to be a piece took out of his leg."

She left the door open, dreading the worst; and this time the table was set and supper ready in the oven by the time Mr. Moggins made his appearance.

A stranger might have imagined the appearance a gloomy one, but Nature had not blessed Mr. Moggins with a radiant countenance; and certain familiar signs, as well as wifely intuition, assured Mrs. Moggins that all was well as yet. Nevertheless she made the inquiry:

"How's she been a-comin', Bill?"

"If You Give Me Any of Your Guff, I'll Make You Think You're the Night-Bloomin' Cereus of the Casualty Ward!"

"I'm still on the payroll," replied Bill not unamiably. He threw his hat at the cat, which fled under the stove in a panic, and then sat down and began to unlace his shoes.

"'Tain't so hard, is it?"

"Oh, ain't it though! Well, I guess yes. Fierce! But I'm still on the payroll—unless the guy reported me."

"Bill," said Mrs. Moggins reprovingly, "don't you tell me that, after all I've bin a-tryin' to pound into you, you've got gay with a passenger!"

"Who got gay with him?" demanded Moggins with an injured air. "I didn't get gay with him until it was a-comin' to him—and five minutes late on the schedule anyway. Say, if it hadn't been for that order I'd 'a' pushed his fat face in so's his back hair'd got mixed with his whiskers. 'Put me off at Turpie Street, conductor,' says he when he climbs aboard. 'Turpie?' says I. 'Sure,' I says; 'with pleasure.' So when we get to Turpie I let out a holler. He don't take no notice; so I figgered he'd changed his mind and took him on to the end of the line.

"'Far's we go,' I says. 'All out!'"

"'Where's Turpie?' says he.

"'Same place,' says I—'right where I hollered it, about three miles back.'

"Well, he gets red in the face and begins to shoot off his yap. I'm perlite, and I offer to carry him back and not charge him for the extry ride; but that don't satisfy him. He's a-goin' to report me. 'That's all right,' says I. 'Muh name's William Moggins an' muh number's 284—which it's on my cap here.' An' I shoves my cap close to him so's he could see it without strainin' his eyes. 'I'll lend you a pencil an' a piece of paper if you ain't got none,' I says; 'or if it will be any ercommodation I'll write it down for you an' welcome,' I says.

"'You're an insolent feller!' he says.

"'Thank you, sir,' says I; an' by that time we started back an' I had him at West Twelfth before he suspicioned anything. Then he got up and come to me.

"'Ain't we pretty close to Turpie now, conductor?'

"'Tolerable close, sir,' says I. 'We're just about a mile past it, I should say. Did you wish to get off there?'

"He begun all over again then—an' me still perlite; but finerly I says to him: 'See here, you pinheaded, potbellied blowhard, I've heard all out of you I want to except just one word; an' you open your mouth to say it an' I'll beat you into a mush an' sweep it off the car as we go along!' That's what I says to him an' he didn't say nothin' more—not until he got off at the next block; but he won't report nothin'."

"Well," ruminated Mrs. Moggins, "maybe he won't; an' I don't know as I blame you, anyway, Bill. He cert'nly must 'a' bin the limit! Was there any others?"

"Sure; but there wasn't none I fussed with. I set out to be perlite an' I was perlite. Sam Wessons was on the run with me an' he thought I was sickenin' for somethin'. He's the one they tried for bustin' the guy's head open with the crank at Riverview Park last summer."

Mrs. Moggins poured the coffee.

"My! Bill," she said, "you don't know how tickled I am! You keep up this lick an' the first thing you know you'll be promoted!"

"What I'm after is to keep my job," replied Mr. Moggins.

IV

THE reformation of Mr. Moggins continued for several weeks, with only slight and casual fallings from grace—and those, it must be admitted, were almost justifiable. The change in him was an all-absorbing topic of conversation and debate in the carbarns, the general opinion being that Bill was running this politeness thing into the ground. A little of it, conductors and others considered, was all right, but the toleration of gayety in passengers and public should have its proper bounds. This being delicately hinted to Mr. Moggins, he replied that he didn't pretend to be able to indulge in civility moderately.

"Some can take it or let it alone, jest as they're a mind to," he remarked. "I ain't that way, muh-self. It's got to be one thing or the other with me; an', so long as that there slobbering order is in force, I'm strong for it."

Nevertheless, Mrs. Moggins worried. She noticed that the slight bulge of flesh over the rim of her husband's collar was disappearing; and though he was uniformly and extra-uniformly suave and affable, there was a dreary monotony about it that got on the lady's nerves. What was lacking in Bill she couldn't say, but it was probably spontaneity—a heartiness that the old morose brutality of manner had never disguised from his wife; and he was certainly losing his appetite.

"It's the happy woman ye must be, Mrs. Moggins, ma'am, wid a husband like yours," remarked Mrs. Clancy from across the hall. "The gintleman, every inch, so he

(Continued on Page 34)

HOW WE GROW DEAF

COLDS AND THEIR CONSEQUENCES

By Woods Hutchinson, A.M., M.D.

ILLUSTRATED BY PETER NEWELL

SOME men are born deaf, some achieve deafness and some have deafness thrust upon them. Broadly considered, the second class is far the largest of the three. We still take too many of our calamities lying down and fail to fight hard enough against our fate—not that we were much to blame for our fatalistic attitude toward deafness up to, say, a quarter of a century ago. Not only had we been taught from time immemorial to regard the dulling of the delicate sense of hearing as one of the inevitable penalties of advancing years, but the cure of deafness, after it has once been achieved, was—and, alas, is yet—one of the discredits—even disgraces—of medicine.

Even today the doctor is not very hopeful of curing deafness in the sense of restoring hearing which has been lost for any considerable length of time; but his attitude toward the condition has been completely revolutionized by the discovery that deafness does not come by chance or by some inevitable process of Nature, but is due to definite and well-recognized causes, three-fourths of which are preventable. The great majority of cases, even of chronic and established deafness, can be prevented from getting any worse and usually improved a little, while nine-tenths of all cases can be prevented entirely, either by avoiding their causes or by taking them in hand as soon as the first sign of trouble with the hearing is noticed.

The Sole Value of the Flap Today is as an Ornament

A Big Motto For Very Little Germs

BY THE mercy of Heaven, the first attack of deafness is never permanent, with a few rare exceptions involving the nerve of hearing itself. The calamity gives fair warning of its approach—whom the gods would fain destroy they first make sneeze. Our hearing is lost, not all at once, or even half or a quarter at once, but by tiny successive fractions, each due to a fresh attack of the disease which causes deafness. And that disease, nine times out of ten, is nothing more formidable than our old friend, or rather most intimate enemy, a common cold, which travels up the tube to the ear from the nose or throat.

The motto of our crusade against deafness emphatically is: "Despise not the day of small things." The only way to cure deafness is to treat it before it reaches the ears. To fuss over the tympanum after you have neglected the throat is literally "to keep the promise to our ear, and break it to our hope"—to try to put out the fire after it has reached the powder magazine. The chief warning to remember in treating and getting rid of colds and catarrhs is that all roads lead to the ear, especially in the later stages of the attack; that every little influenza germ, whose motto is Excelsior! climbs the Eustachian tube to the ear, and that every effort on the part of the invader to reach "the man higher up" lands him on the eardrum. Take care of the nose and the ear will take care of itself.

It is Not a Bad Idea for Him to Test it Occasionally

It is curious what picturesquely distorted notions prevail about the causation of even such common and frequent misfortunes as deafness and blindness. Both have formed "high lights" in the classic picture of old age since the very dawn of history. The explanation was as simple as it was plausible and poetic. The dull hearing and dimming vision were due merely to the gradual wearing away and blunting of the keen edge of all the senses and powers of the body under the successive shocks of years and the wear and tear of life.

The auditory nerve was supposed to have been hammered and pounded, as it were, into a sort of stupor—the retina dazzled and flashed into a dazed condition where it could no longer respond to the rays of light. Deafness and the clouded vision of the old man were merely a part of the general scheme of decay—"sans hair, sans teeth, sans everything."

Nothing could sound more reasonable and altogether in accordance with what was to be expected. So long as we were satisfied to accept statements of how things were ordained to be, or inevitably must be, instead of taking the trouble to find out what they actually were, this was a perfectly good explanation, and it has been embalmed in the literature of all the ages; but, the moment we began to ask uncomfortable questions and to insist on finding out the facts, a totally different condition of affairs was discovered to exist.

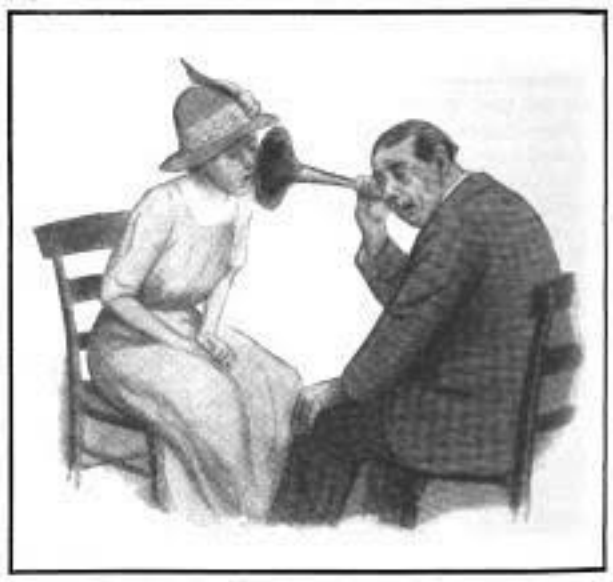
Barely half a century ago, for instance, it was found that two-thirds of the failing vision of old age was due not to any dulling of the retina or optic nerve, or dimming of the transparent parts of the eye, but merely to the failure of the little circular muscle within the eyeball; so that the eye could no longer adjust or accommodate itself to the light rays. Practically perfect vision, keen and sharp, though, of course, more readily tiring than before, could be restored by fitting the proper "specs"—that is, placing a glass or a lens before the eye to make good the failure of this muscle to act.

When a Safety Valve is Not a Safety Valve

HALF the remainder of the blurred vision of advancing years was found to be due to changes in the lens of the eye known as cataract; and when the clouded lens was removed by a simple surgical operation, and a new clear lens of glass hung in front of the eye in its place, the retina was found to be as clear and sharp as ever. In short, the retina and the optic nerve of the old man of seventy were found to be practically as keen and as responsive to the light as they had been at seventeen; and a full third of the discomforts of old age were relieved at a stroke.

The same thing has been found in regard to the dull ear of old age in even higher degree. Not more than a fraction of a per cent of the deafness of old age is due to changes in the nerve of hearing. In other words, the hearing of the grandfather is at bottom as keen as that of his grandchild if only the sound waves can actually reach the keyboard of his nerve. In the economic jargon of the day, it is the "middleman" who is at fault—the conducting apparatus that lies between the sound waves and the organ of hearing, known from that fact as the middle ear—that is really deaf. Nine times out of ten, when you say a man is deaf you mean that his eardrum and its piano-hammer attachments are out of order.

Our hearing machine, though distressingly complicated in its details, is exceedingly simple in principle. Briefly, it consists of three parts, with a safety-valve attachment to one of them, known simply from their positions as the outer or external ear, the middle ear and the internal ear. The safety valve is the joker that gives rise to nearly all the trouble. The division of labor between these three parts is matter-of-fact and rational.



The outer ear, as plainly follows from its position and shape, is merely a horn or funnel for catching the sound waves and conveying them into the interior of the head, where the middle ear lies warm, sheltered and out of harm's way. The outer ear is really of the most trifling importance—little more than a hole leading down to the drum, with a more or less movable flap over its opening. The sole value of the flap today is as an ornament—and it is not exactly a howling success at that in some of us.

The middle ear is, in principle, equally simple and matter-of-fact. It consists merely of a tightly stretched disk or drum of skin, with a cavity in the bone behind it to allow it to vibrate. Across this cavity runs a chain of exceedingly delicate little bones which transmit the vibrations to the internal ear or organ of hearing proper.

The Piano Board Under Your Hat

THIS internal ear is vastly more complicated; but, as it luckily seldom becomes diseased—and when it does we do not know what under Heaven to do for it and have no remedy that will reach it—its makeup is of little practical importance. We may here dismiss it with the statement that it consists of a singular little keyboard about an inch and a quarter long, coiled up like a snail shell—*cochlea*—made up of tiny rods laid side by side, not unlike the keys of a pianoforte.

The delicacy and elaborate perfection of the whole may be gathered from the fact that in its inch-and-a-quarter length there are five thousand separate rods or keys. Each of these keys is believed—though this is largely hypothesis—to vibrate in response to some tone or shade of tone that can be heard by the human ear; and their vibrations are conducted to the tiny twigs of the auditory nerve, which run along the under side of the keyboard and then unite into a small twisted cable, to pass to the brain.

As Soon as Sound Waves Jar Through the Bones of the Head, They Can Reach the Nerve of Hearing

Each key is supposed to pick out its particular note by vibrating in response to it, much as the receiving apparatus of a wireless telegraph responds to or catches the particular vibration to which it is tuned. It is probable that here is the site of those extraordinary differences in tone perception that exist between us, ranging from the born musical ear, with its delicate appreciation of the subtlest harmonies, down to inability to distinguish Old Hundred from Yankee Doodle.

Not a little of the painful and laborious process known as "musical training"—laborious for the pupil and painful for the neighbors—consists in limbering up and drilling the keys of this internal piano. They are taught to work separately from one another, so that the slightest deviation in tone, known as flatting or sharping, can be accurately distinguished; and also they may be given such simple and rudimentary training in arithmetic as will enable them to recognize when any note is struck which has two, three or five times the number of vibrations of their own particular note, and to respond promptly thereto. This response to simple multiples or vulgar fractions of their own tone forms the basis of what we call harmony. In that last survival of the torture chamber of the Middle Ages—five-finger exercises—you are training not merely your stiff and unwilling fingers but the keys of this piano—a piano whose keyboard

Digitized by Google

is coiled in your own head, or should be; but which often, so far as possibility of effective training is concerned, exists only—in the vernacular of the day—"in your mind."

The three parts of the hearing machine will thus be seen roughly to correspond to the parts of the transmitter of a telephone. The projecting mouthpiece is the external ear and the hole leading down to the drum; the diaphragm is the drum, and the little chain of bones behind it is the armature which changes the vibrations of the diaphragm into alternating electric currents; and the auditory nerve is the wire that transmits the message to "central."

It is well to have this general idea of the gearing of our hearing machine, both because the three divisions of it play widely different parts in the production of deafness, and also because the practical importance of the parts they play could almost be inferred from their position.

The outer ear, being little more than a hole through which the sound waves can reach the drum in its place of shelter and safety an inch and a quarter below the surface of the head, plays almost no part at all in the production of deafness; in fact, the only way in which disturbances of this part of the ear could interfere with hearing would be by blocking or plugging it up completely—which, in the nature of the case, very seldom happens. Only two such accidents are known—tumors and accumulations of wax.

The other end of the apparatus—the internal ear—is so deeply imbedded and buried within the bones of the head, so completely protected from all possibility of exposure to attack, that it is literally one of the "safest" structures in the body; in fact, the only dangerous enemies of the keyboard and auditory nerve are the toxins of a few infectious diseases, which have a special power of singling out and attacking the brain and nervous system. For practical purposes, these may be really reduced to two—one fortunately rare; the other more common—cerebro-spinal meningitis and blood taint. Could these two diseases be wiped out—and they are both preventable and one day will be prevented when we become intelligent enough—we should practically get rid of all deafness due to diseases of the keyboard and nerve of hearing, known as nerve deafness.

This leaves the middle ear, or drum cavity and its attachments, as the weak link in our chain of hearing, the region in which nearly nine-tenths of all cases and forms of deafness occur. The particular Ethiopian in our middle-ear woodpile, however, is that wretched little tube connecting the drum cavity with the throat, called the Eustachian tube, after the fine old father of anatomy who first discovered and described it. It might almost be called the deafness tube, for it is literally the leak that lets in the flood—the underground passage through which our germ enemies can crawl and worm their way into the very citadel of our fortress of hearing. Then, once they have effected an entrance, they block up the passage that admitted them and proceed to be fruitful and multiply, torturing the defenseless drum and the delicate lining of the drum cavity until they weep literal tears of agonized exudation and pus, thus raising the pressure in that tiny prison until every little nerve twig in it, trapped and jammed against its bony walls, shrieks in agony. Then we say that we have an attack of earache.

The Bump That Breeds Trouble

IF THE enemy be sufficiently numerous and vicious the tension will continue to rise in the drum cavity, and the pain will become more excruciating until the bacillus bomb literally explodes, either by rupture through the drum and discharging a gush of "matter" from the outer ear, or by blowing out the débris with which it had obstructed the Eustachian tube behind itself and pouring back harmlessly into the throat.

Though this is the most painful and furious form of attack upon the middle ear, it is neither the commonest nor the most dangerous. Contrary to popular impression, bursting or perforation of the drum is not a dangerous accident, nor is it often followed by permanent deafness or even serious dulling of hearing. Every time there is a discharge from the ear in childhood this process has occurred; yet, as every one knows, not more than one case in fifty of "running from the ear" is followed by permanent deafness. Instead of its being difficult to heal up the opening in the drum, our greatest trouble is to keep it open long enough to allow complete emptying of the cavity and clearing up of the inflammation within. Just as soon as the discharge ceases, the hole in the drum heals up completely, leaving only a slight scar, and the hearing quickly becomes as good as ever. A puncture of the drum will heal as readily as a cut or scratch on the skin and leave no discoverable scar. So there is no need to fear deafness for life because there has been an explosive or a "relief" perforation of the drum.

This is not by any means to say that rupture of the eardrum is a mere trifle. It is anything but that. The hole made may be large and ragged enough to leave the drum permanently distorted and tied down by the scar, so that it will never vibrate properly afterward. Moreover, on account of the fact that the drum cavity is separated from the brain by only the thinnest plate of bone, the inflammation may push inward, so to speak, instead of bursting outward, and cause a serious meningitis or brain abscess; or the inflammation may spread to certain cavities in the skull just behind the ear—known as the mastoid cells, and set up the now famous mastoid abscess, which also threatens the brain. So that the only safe thing to do in cases of severe earache, whenever the inflammation has gone above a certain height and refuses to yield within a few hours to warm douchings and other local treatment of that sort, is to call in the ear specialist and puncture the drum with a delicate knife-pointed needle, so as to allow the matter or pus to escape harmlessly into the outer ear.

Pus in the drum cavity is literally between the layers of the bones of the skull and may leak upward or inward into the brain or backward into the mastoid quite readily. Usually it works into the large spongy cavity in the mastoid—the bump behind the ear, phrenologically known as "the bump of destructiveness"—and there gathers force for its attack on the brain. So that the moment the bump behind the ear begins to swell or redden, or become tender to pressure, it is time to call a surgeon. Then trephining or chiselling down through the bone to the hollow where the pus is will let it out and save the brain from attack. This is a serious operation, but better than a brain abscess.

The Little Skirmishes That Win the Battle

THE middle-ear attack, which most commonly leads to deafness, is the one which produces little more than that sensation of fullness in the ears and woodenness or dullness in the head, which so frequently follows an attack of sore throat or influenza. Here the germs are fewer in number or less vicious in temper, and do not make themselves so disagreeable as to stir up an inflammatory revolt of sufficient violence to "fire them out" bodily. They succeed in establishing either a permanent foothold or in setting up a slow, thickening, fibrous inflammation of the drum and of the mucous membrane covering the tiny chain of bones.

The temporary excitement which their first arrival caused subsides. The dull, stuffed feeling in your ears disappears after a few days or perhaps a week or two. You think you are as well again as ever; but if you were to test yourself with a watch or tuning fork, you would find you had lost a couple of inches of the distance at which you could hear it. Another cold is caught a few months or years later and fresh reënforcements are added to the hostile forces at work in your drum cavity. A sharper attack of stuffiness and temporary deafness follows; and when that subsides you have again lost a few more inches of your range of hearing. And so you slip gradually down the incline toward the pit of deafness; until finally, by the fifth, tenth or fifteenth attack, you have lost enough of the "margin" of your hearing to begin to make it difficult for you to hear ordinary conversation. Then you suddenly discover and announce to your friends that you must be growing deaf.

Then it is too late to do much more than save such hearing as you possess and stop the process from going farther.

Just avoid common colds as completely as you possibly can; attack them vigorously, with the assistance of the best expert advice that you can secure whenever they do occur. Be particularly careful that they are cleared up as promptly and as cleanly as possible, and not allowed to hang on for weeks or months at a stretch. Consult your family physician or a competent nose-and-throat doctor whenever any stuffiness in the ears or dullness of hearing lasts for more than three days, and you will escape at least two-thirds of all your risks of becoming deaf, no matter to what age you may live. The main reason why deafness is so much more common in later life than it is in childhood or young life is that there have been so many more years to catch colds in.

That Last Survival of the Torture Chamber of the Middle Ages—Five-Finger Exercises

Almost any infection that begins in or involves the nose and throat may also climb the Eustachian tube and attack the drum. Measles and whooping-cough, for instance, quite frequently do so, and pneumonia and the more violent types of epidemic influenza less frequently but with a peculiar deadliness, producing furious earache, with almost certain perforation of the drum and great danger of spreading to the mastoid.

There is one infectious disease, however, that seems to have a special fondness for attacking the eardrum—so much so that it is probably the commonest single cause of chronic running from the ear—and that is scarlet fever; in fact, the two most important points to watch during the attack of this scourge of childhood are the ear in the first week of the fever and the kidneys in the later stages. Fortunately the same method will tend to prevent ear trouble in all of these fevers—namely, thorough and careful antiseptic treatment of the nose and throat by means of sprays and washes such as are advised in the treatment of an ordinary cold, only somewhat more strongly antiseptic or germicidal. Care in this respect will reduce the risks of ear trouble, even in scarlet fever, to a minimum.

Fresh Air the Foe of Deafness

IT IS always well for the intelligent mother to be carefully on the lookout for earache in all the little fevers of childhood, including colds and tonsilitis, especially in children who are too young to tell or even clearly indicate with their little hands where the pain is situated. Successive attacks of loud and prolonged crying or screaming without ascertainable cause in a baby or young child that is feverish, particularly if the little one rubs the side of its head or burrows its head deeply and restlessly into the pillow, should always rouse suspicion of earache and call for expert advice.

Though colds or sore throats will cause earache or middle-ear disease in the adult directly, in children they more commonly do so indirectly by setting up that inflamed and suppurating condition of the roof of the throat now famous as adenoids. An adenoid child, with this pile of tinder at the very mouth of his Eustachian tube ready to flare up at the slightest spark of cold or chill, lives perpetually upon the brink of deafness.

As a matter of bitter and practical experience, most children with adenoids sooner or later become deaf enough to interfere with their studies and mental development; and the habit of attacks of earache after every slight cold in a child almost invariably means the presence of adenoids.

Colds upon colds thicken up the drum and stiffen its conducting chain of tiny bones just as the proverbial dropping of water wears away the stone. The best preventive of deafness is fresh air—twenty-four hours out of the twenty-four. For ninety-nine per cent of us, the statement, "no colds, no deafness," would be literally true.

Of course the more completely we can avoid colds, the better it will be, not merely for our ears but also for our joints, our hearts, our kidneys, our livers and our nervous

Whom the Gods Would Pain Destroy They First Make Sneeze

Digitized by Google

systems; for the conviction is steadily growing that these puny "little foxes" in the body vineyard, these mere rats and mice in the House of Life, probably cause more Bright's disease, organic heart disease, gout, rheumatism and neuritis than any other single influence.

Though this "counsel of perfection," of absolute avoidance, is impracticable in the present state of our intelligence and the health conscience of the community, fortunately the very same measures which reduce the risks of cold-catching to the lowest possible minimum are also those that will enable us to acquire immunity from colds, resist them vigorously when they do occur, and throw them off cleanly and promptly. So that if we live cleanly, wholesomely, happily, with a gentle current of fresh, cool air—popularly known as a draft—blowing across our faces two-thirds of the time—day and night—with plenty of exercise in the open air, plenty of rich and appetizing food and plenty of sleep, we can practically snap our fingers at colds and ninety-nine per cent of their deadly consequences, including deafness.

Our noses and throats are evidently, under civilization at least, points of least resistance in the body. This is illustrated by the fact that they are not only the site of the commonest of all our diseases—colds and their relatives—but are also the port of entry for at least half, if not two-thirds, of our more serious infections, such as measles, scarlet fever, smallpox, diphtheria, and so on. It is a useful and practical procedure to keep in your bathroom or your bedroom, or on a shelf of your medicine chest, some form of mild alkaline and antiseptic nasal spray or wash. Your family physician will gladly give you a prescription for one suited to the special conditions of your nose and throat, or the "family" nose and throat. Then use the wash whenever you suspect that you have been exposed to risk of infection by a common cold—for instance, when you have been to the theater or to church, or in a crowded, stuffy, smelly train or street car—or whenever you feel any sensation of tickling, dryness or stuffiness in the nose and throat, and with redoubled vigor when you think you are catching cold. I know of no "stitch in time" in our hygienic economy that is more likely to "save nine" than this simple procedure.

The chief things needed in these washes are that they should be as nearly as possible of the same density—specific gravity—and temperature as the blood, and not too strongly antiseptic; for it is almost impossible to make them strong enough to kill or even seriously injure the germs in the nostrils without making them injurious to the delicate membrane of the nose. If properly adjusted to individual conditions they are perfectly harmless and have a decided effect in diminishing the probability of colds being caught, the severity of their attack if they do occur, and the likelihood of their hanging on or producing unpleasant after-effects. Then, in the event of a definite impairment of hearing which does not promptly subside within two or three days, consult your family physician or a nose-and-throat specialist. Nothing is easier than to cure deafness at this stage of the process; and even a single treatment now may be the means of blocking the way in the direction of serious and permanent hardness of hearing.

It may perhaps excite wonder in some minds as to why that wretched little rift in the lute, that fatal leak in the side of our bark of hearing—the Eustachian tube—was introduced or permitted in our bodily makeup by Nature. In view of its dangerousness, why should we not stitch or plug it up completely in some way and thus protect the middle ear from a thousand risks? Unfortunately it is as necessary as it is dangerous. If our eardrum is to vibrate at all it must have air on both sides of it and the pressure of the air inside or behind it must be kept equal to that on its outer surface; and this tube is simply an equalizing pipe for that purpose, through which air can be sucked into the drum cavity whenever a vacuum begins to form.

Indeed, blocking up the tube alone will cause deafness. The air in the drum cavity is quickly absorbed into the blood, producing a partial vacuum; and then the atmospheric pressure of the outside air upon the drum pushes it in, so that it can no longer vibrate; and at the same time it jams the little chain of bones together so tightly that they cannot transmit the sounds. This is one of the methods by which middle-ear deafness is produced—the tube becomes blocked by inflammation, the drum is driven in by the pressure of the outside air, and slow fibrous changes tie it down and glue the bones together—and permanently fix them so. This is why the mere driving out of a bubble of air along the Eustachian tube—as, for instance, when you blow your nose and your ear "goes pop"—will sometimes improve your hearing when your head is stuffed up and your ears feel blocked and full.

However, every cloud has its silver lining—and deafness is no exception. In spite of the swarms upon swarms of enemies that threaten the peace of our eardrums, and the frequency of some degree of hardness of hearing after middle life, there are two or three consoling items to be entered on the credit side of the ledger. The first of these is that, as we have already seen, all these conditions are not only preventable but in process of prevention by the spread of intelligence and the progress of sanitary science. The second is that the vast majority of cases of deafness, even after they have got a good start, can be kept from developing beyond the stage where there is still sufficient hearing left for most practical purposes. And, last and most fundamental of all, middle-ear disease, which causes nine-tenths of all deafness, almost never completely destroys hearing.

This last is inherent in the nature of the affection; for, as we have seen, the middle ear consists entirely of conduction apparatus, and the real, live, essential parts of the organ of hearing—the nerve and the sound-keyboard—are

(Continued on Page 37)

THE APPLE OF DISCORD

III

By Henry C. Rowland

ILLUSTRATED BY WILL FOSTER

MRS. WILMERDING was not content. She sat on the veranda of the reading room and watched the big hulk being guided gently down the tide by the motor whaleboat, and as she watched there reached her ears the vibrant tones of Mr. Phelps as he enthusiastically described one Calvert Lanier, playwright, and his floating home. Mrs. Wilmerding's pretty brows were knit in a frown.

There were several features about the affair that annoyed her excessively. To begin with, she had more than once secretly regretted her action in the matter of Lanier, and she had felt that he had in a way justified her objections to him by his behavior in taking a spiteful revenge. Now, in withdrawing his hulk to an inoffensive distance and obliterating the accusing name, he was demonstrating a decency of feeling that was bound to alter the general sentiment of the colony. Had he withdrawn himself completely from the Chimney Corner and gone about his business beyond its observation, his action might have left a certain sentiment of remorse; but in merely hauling off a mile or so he was bound to remain an object of communal interest and speculation, while it was very possible that public opinion might take a turn in his favor. Such a state of affairs would not tend to the increased prestige of Mrs. Wilmerding.

Mr. Phelps' amphoric voice reached her jarringly. "A genius—Lanier," he was saying largely—"a positive genius! I am not at all sure that we have not made an unfortunate error—eh, Major?"

"I like him," said the major. "I should enjoy seeing more of him."

Mrs. Wilmerding turned abruptly in her chair.

"There is nothing to prevent your doing so," said she sharply. "No doubt, from a man's point of view, it is a convenient thing to have a floating bar about the premises."

There was no immediate answer to this. Mrs. Wilmerding rose suddenly from her chair and stepped into the writing room. Her mind had taken a quick resolve. The colony was threatened with schism and internal dissension, and Mrs. Wilmerding decided on a *coup d'état*. The propinquity of a rank outsider, who was regarded favorably by certain members while yet barred admittance from the sacred precincts of the Chimney Corner, made a situation that was dangerous and embarrassing. Mrs. Wilmerding decided to have it out herself with the playwright, should this be possible. Seating herself at a desk, she wrote as follows:

Mr. CALVERT LANIER,
Yacht Broken Word.

Dear Sir: Your action in acceding to the request of our president to remove from the immediate vicinity of the reading room has put the writer and certain other of our members in a rather difficult position. It is intimated to us that in opposing your membership we have acted unjustly and unwisely, and that your expressed desire to cause no more annoyance on learning the source of your opposition proves you to be a person of chivalrous instincts, who would have been a distinct acquisition to the community.

Admitting the truth of this view, the writer, who is the chief cause of the late unpleasantness, would like the opportunity of justifying her recent course. Would you be willing to call upon her tomorrow afternoon at an hour to suit your convenience?

Yours truly,
LORETTA WILMERDING.

Beacon Rocks, Chimney Corner.

Having sealed and addressed her note, Mrs. Wilmerding left the reading room, and passing round the head of the little cove took the path along the cliffs that led to her summer home—a long, low house built of stone and stucco, situated on the brow of the cliffs, half hidden by a growth of dwarf pine and about half a mile toward the inlet from the reading room. Just before reaching the beginning of the last steep ascent that led to the house, Mrs. Wilmerding took a narrow winding path that ran down to the shore, and here in a cosy bight with a shingly beach she came upon a charming, rustic boathouse, in front of which a lank youth was engaged in baiting some lobster-pots.

"Caleb," said Mrs. Wilmerding, "I wish you to get into the dory and take this note out aboard the—the—that hulk that was lying off the reading room ——"

"The Broken Word, ma'am?" asked the young man, looking up in surprise.

"Yes," answered Mrs. Wilmerding calmly, although she winced a little at the name. "Please wait for an answer—and bring it up to the house before you start out to set your lobster-pots."

"All right, ma'am." The youth took the note gingerly by the corners and dropped it into his pocket. Then a sudden thought striking him, he asked:

"He call'atin' to drop his hook offen here?"

"He will probably anchor nearer than we care to have him," she answered. "And—oh, Caleb."

"What, ma'am?"

"It is not necessary to say anything about my having sent you with the note."

"No, ma'am," Caleb answered, whereat Mrs. Wilmerding turned and made her way up the steep winding path to the house. Caleb was the functionary who looked after the Wilmerdings' boats.

Arrived on her veranda, a little breathless and charmingly flushed, Mrs. Wilmerding stepped to a big telescope on a tripod and watched the sluggish maneuvers of the hulk, which was still drifting slowly down with the tide and rather ridiculously in tow of the motor whaleboat. At a distance of about half a mile from the Wilmerdings' boathouse the anchor splashed over the bow and the hulk came presently to a stop. A few moments later Caleb's dory drew alongside, where it remained for so short a time that Mrs. Wilmerding's face grew rather red, for she did not think that Lanier could possibly have had time to write an answer. It crossed her mind that he might have glanced through her missive, then told the messenger that there was no answer. This humiliating doubt was soon set aside, however, by the return of Caleb, who handed her an envelope inclosing a correspondence card on which was written in a minute and regular hand:

MRS. WILMERDING.

Madam: In reply to your note I have the honor to say that I will call, as you request, tomorrow afternoon at four.

Very respectfully,
CALVERT LANIER.

If Mrs. Wilmerding could have witnessed the reception of her note it is possible that she might have been vexed. Lanier was engaged with some business correspondence when the cat-footed Charlie dropped the missive on his desk. He frowned, ripped open the envelope, scanned it through, then grinned wickedly.

"Mrs. Wilmerding," said he to himself. "Why, that's the wife of the thin gray shape who betrayed me. Beautiful, I understand, and domineering." He grinned again. "A splendid chance to get even."

He dashed off his brief reply and gave it to the Chinaman, then returned to his business letters. It is doubtful whether he thought three times of his promised call until the near approach of the hour of rendezvous. Lanier had a singular power of concentration, but he was by no means absent-minded, and never failed to keep an appointment. So he dressed with his invariable perfect taste and, having neglected to ask where the Wilmerdings' house might be, had his caretaker set him ashore on a point of land opposite his anchorage, intending to walk toward the settlement, making inquiries of any whom he chanced to meet on the way.

There was a path along the top of the low cliffs, and Lanier had proceeded in a leisurely manner for about a hundred yards when he came upon a girl who was standing before a half-painted canvas on an easel. She had located herself directly on the side of the path, and as the playwright approached he observed that she was very young and more than uncommonly pretty. Her eyes were so dark that he thought them black, until a second look proved them to be an almost purple violet. Her hair was a rich auburn, very thick and at that moment none too

Digitized by Google

tidy, and the loose sailor suit she wore could not conceal a deliciously lithe and rounded figure with long limbs and exquisite ankles.

At the sound of his step she spoke without looking round, and his musical ear was at once attracted by the *low*-pitched, throaty tone:

"Don't bother me. I'm busy ——"

"I don't intend to bother you," answered Lanier, "beyond asking where Mrs. Wilmerding lives."

She spun round quickly, and it was after the first glance, when the violet eyes opened wider, that he discovered their real quality.

"Oh!" said she. "I thought it was Stephen Carew. He's always taggin' me round."

"A man can be a nuisance and yet show great intelligence," Lanier replied, and looked at the picture, which was full of faults. The young girl's gaze followed his.

"Do you know anything about painting?" she asked.

"It is one of my professions," he answered.

"Then tell me what's the matter with my picture. I can't seem to get it right."

Lanier half closed his eyes, and in so doing unconsciously accentuated the length and thickness of his long, very black lashes. The girl eyed him covertly.

"There is something the matter with it," said she, as he did not immediately speak.

"Yes," he admitted, "there is. The distant pines are too green, the sky is too blue, the rocks are too brown—and if a ship hit the edge of that horizon she would lose all of her spars." He looked at her and smiled the swift, dazzling smile that seemed to light with a startling suddenness the shadows of his nervous face and to wipe away its cynical expression, leaving instead an immense kindliness. "What is your name?" he asked.

"Clare O'Sullivan," she answered, staring at him with a fascinated and slightly bewildered expression on her face.

"Well, then, Clare," said Lanier, smiling thoughtfully at the canvas, "some teacher must have told you to work only in pure colors, which is excellent advice, but not to be followed too slavishly. Don't you see the gray tone in everything today? Besides, you've painted everything but the air, and that you've left a vacuum. Put your gray tone all through, and those colors will come down into their places."

She handed him her brushes and palette. "Show me," said she.

Lanier smiled again as he took the things from her hands, then with a few rapid touches began to pull color and values into their true proportions. It was a simple scheme, and he had done many like it in Brittany, before the pen claimed him and he picked up the brush only to work out scenic effects. But to the girl it was amazing—a piece of magic—for she was practically self-taught.

Presently he turned and held out to her the palette and brushes. Clare stepped back, holding up both hands, and he noticed what pretty hands they were.

"No! No!" she cried. "Finish it—please! And who are you and where are you visiting?"

Lanier resumed painting and had laid in several broad strokes before he answered. Then he said, talking as he worked and speaking half absently, for colors and brushes were of the best, the composition charming, and under the inspiration of the girl and the moment he was doing an exquisite though simple thing:

"In the Chimney Corner, Clare, such a question does not require an answer. All of those who are with you are—or ought to be—of you."

"I told you mine," she pouted.

"You shall know mine by-and-by."

"But I want to know it now."

"Then watch. 'By their works ye shall know them.'"

He had been working rapidly to cover the canvas with the soft gray haze of a rather cloudy afternoon in July with the delicate mistiness that precedes a smoky sou'wester. Much of Clare's most painstaking drawing had been painted out, with the result that one could almost hear the hiss of the brown, glistening kelp as the tide fell. There was no particular note to the study; it was rather impressionistic and vague, and the girl had ignored the big hulk of the quondam Broken Word moored in the immediate foreground. Lanier began to paint it in swiftly but deftly, and with broad but subtle strokes. Under his handling the hulk became a thing of picturesque beauty; an old seafarer hauled apart to die; a tired candidate for the port of missing ships, ready for its last resting-place, whether to bleach its tired bones on a forgotten beach or to let them sink gently to the ocean's soft bed. The brave old hulk was shrouded in mist and mystery.

Clare watched the swift strokes of the brush, half troubled, half fascinated. She failed utterly to grasp the significance of Lanier's last words and the painting in of the hulk that followed them. It was the man rather than the picture that claimed the girl's interest. Lanier, intent now on his sketch, seemed oblivious of her.

"You see, Clare," said he presently and without looking at her, "you must think of colors from the viewpoint of their relative values. That bit of water off the end of those rocks is really very high, but by giving it that violet tone you made it about the lowest value in the foreground."

"Why do you call me Clare?" asked the girl.

"Because you told me that it was your name. Now if you had said that your name was Miss O'Sullivan I should have called you that—which would have been a pity."

"Why would it have been a pity?"

"Because I should not have stopped to paint you a picture—and kept Mrs. Wilmerding waiting. I fancy that Mrs. Wilmerding is not accustomed to being kept waiting, and therefore it will do her good."

"Don't Bother Me. I'm Busy ——"

"Indeed." The curiosity in her violet eyes was growing deeper, so was their color. "Then you think that what is unaccustomed is good for one?"

"Very. It scrapes the barnacles off the mind."

Clare watched him in silence. "You know your work," said she presently. "Where did you learn to paint?"

"At Julien's and in Brittany. Where are you studying, Clare?"

"I am not studying—and you mustn't call me Clare. I am not a child."

He turned from his canvas to look at her, and as his eyes, which were of an indescribable color, met hers Clare was conscious of a sudden and peculiar warmth, which seemed to come out of the ground and traveled glowingly up through her vigorous young body to find its outlet in her piquant face, which flamed suddenly in a crimson flush.

"Oh, aren't you?" asked Lanier, and smiled.

"I put away my dolls long ago," said she.

"Really? Then I must be the child, for I still play with mine. I have some dozen, and scarcely a day goes by that I don't take them out and change their clothes."

Clare's face showed puzzled anger. The friendly informality of the Chimney Corner was one thing, but to be chaffed by a strange young man was quite another. Her supple, girlish figure straightened haughtily.

"Thank you for helping me with my picture," said she. "I am going to paint it out now and start another. And it's really not very nice of you to keep Mrs. Wilmerding waiting."

Lanier said nothing. Turning quietly he picked up a broad brush from the color box. Clare stepped forward and held out her hand instinctively.

"I'll paint it out," said Lanier. "The general gray tone will make an excellent background for the next. Let it dry and start on a fresh panel."

He stepped to the easel, but Clare reached forward quickly and seized the brush.

"I think I won't paint it out after all," said she. "I—I like it. You may call me Clare if you like. But I wish you'd sign it."

Lanier's quick smile sent another thrill through her. The instant before his face had been almost severe, glacial, but the smile for all its charm was the least bit cynical. He saw through the little feminine ruse to learn his name.

He took a small brush and deftly traced in the corner of the panel:

PAINTED FOR CLARE
BY CALVERT LANIER

He turned and looked at her, a gleam of amusement between his dark lashes. Clare was standing perfectly still, looking at the picture through narrowed lids. Lanier could see the girlish bosom rising and falling under the loose blouse. Suddenly she stooped and picked up a brush, then stepped to the easel, where she hesitated for an instant.

"What are you going to do?" he asked.

She turned and looked at him and he saw that her face was rather pale.

"Paint out your name," she answered.

"Is it detested to that degree in the colony?" he asked.

"It isn't that," she answered.

"Don't you want one of my signed studies?"

"I'm—I'm crazy to have it," she confessed. "But you see, Mr. Lanier, I haven't come by it honestly. I wanted only to find out who you were, and now by signing it you have given me a really valuable present. I oughtn't to accept it."

Again the smile sent Clare's blood racing up to crimson her face. He reached out and took the brush from her hand.

"It is a free gift," he answered. "There is no reason why you shouldn't keep it. Between artists there is no talk of intrinsic values. Give me a sketch of your own."

"Oh—but I've nothing good enough," she faltered. "If I only had something else to give you!"

"You have," answered Lanier, smiling.

Their eyes met and Clare read his meaning. She drew back with a startled look. Lanier held out his hand.

"Goodby, Clare," said he gently.

Clare took the offered hand and a sudden madness seized her. She swayed forward.

"It's not much to give for such a lovely sketch," said she rather breathlessly, and raised her face to his. The flame in her eyes was reflected in Lanier's. He had not meant to coerce her, but she seemed to him scarcely more than a child, if a very lovely and well-grown child. He had spoken more in a spirit of boyish mischief combined with a curiosity to see what she would do and say. But as the tempting face was lifted and the violet eyes looked straight into his, a very real and very tender emotion swept over him. Nevertheless, it was with a sense of guilt that he reached out, drew her to him and touched the fresh, parted lips with his. Then he stepped back, with the vague sense of having kissed the heart of a rose.

"I am a thousand times repaid for my little sketch, Clare," he began gently, then paused at the expression of her face. Clare's color had fled and she was staring over his shoulder. Her wide-open eyes were positively black.

Lanier turned sharply. A few paces behind him there had emerged from a turn in the path a very pretty woman, who was standing stock still, her graceful figure held very rigid and an expression of indescribable shock upon her face.

"Mrs.—Wilmerding ——" faltered Clare under her breath.

IV

THE tableau lasted only for an instant. Mrs. Wilmerding turned slowly and disappeared behind the clump of dwarf pines whence she had so inopportunely emerged. Lanier swung about and looked at Clare.

Digitized by Google

"Mrs. Wilmerding, eh?" said he. "I am afraid, Clare, that you may have had to pay an even higher price for my wretched little sketch than I had supposed—and you may be sure that my most successful work, whether artistic or dramatic, was never so overcompensated. Will the good lady tattle?"

Clare shook her head. She had been going white and red by turns. "No," she answered, with a rather frightened smile. "Mrs. Wilmerding isn't that kind."

"She looks very nice," Lanier assented. "I suppose I'd better go after her and keep my appointment."

They looked at each other and laughed. The discovery of the innocent sin appeared to have formed a closer tie.

"What are you going to say to her?" asked Clare.

"About my painting fee? Nothing, of course, unless she introduces the topic. Then I'll tell her the truth."

Clare began to push a pebble about with the toe of her little shoe.

"And what is that?" she asked, without looking up.

"An idyl."

"Is that all?" She glanced up with a smile on her mouth and a curious mistiness in her eyes.

"Idyls are the garments of the gods cut down to fit us mortals, Clare. I can say no more than that."

Clare looked dissatisfied.

"I'm not keen about hand-me-downs—even from the high gods," she answered a little shortly. "Besides, it wasn't an idyl anyhow. It was simply that I didn't want to be—to be under obligations to a stranger. That's what I shall tell her. So you'd better say the same thing."

Lanier laughed. "You are right, Clare. It wasn't an idyl at all. It was a purely commercial transaction on your part. When I spoke of it as an idyl I was thinking of myself."

"Then you think," said Clare, giving the pebble a little kick, "that I am willing to trade a kiss for a picture worth several hundred dollars? Is that your idea?"

"No. I think that you inherit the princely instinct to return gift for gift with no thought of cost. I give you of my little best. You are graciously pleased to accept, but pride will not permit of your not reciprocating. You give me of *your* best—and Mrs. Wilmerding butts in. Now I must go, and Mrs. Wilmerding will no doubt give me of *her* best—and I fancy, from the look of her face, that it will be well worth not having. Goodby, Clare ——" and he held out his hand.

Clare swung about impetuously and her firm little hand nestled for a moment in his. "*Au revoir*," she said, "and thank you for the sketch," and she turned suddenly away and began to gather up her painting things.

With a very warm feeling in his heart Lanier took the path by which Mrs. Wilmerding had preceded him, which wound along the edge of the cliffs, occasionally to dip back into the dwarfed pines. Another man might have felt a certain amount of diffidence in calling upon the official duenna of an exclusive colony immediately after being taken red-lipped, as one might say, in an act of gallantry to the said colony's youngest and prettiest débutante, but Lanier was conscious of no embarrassment. As a matter of fact, he was not thinking of Mrs. Wilmerding at all, but of Clare O'Sullivan.

The playwright was amazed to find himself so stirred at the touch of a girl's fresh lips, not because such contact was habitual, but because he thought that he had long since passed out of the sentimental stage and into the analytic, which is very apt to be the cynical.

Lanier had gone through an early and violent love affair which had ended unhappily and left him, as he thought, safely inoculated against poisoned darts. This episode had aroused first a furious resentment, then a thoughtful curiosity. He had taken to studying women as a scientist or philosopher might study the composition of a flame, the law of storms or the combustion point of high explosives. It was not an idle pursuit, for the result of his observations went to the creation of his art first, then his books, then his drama, and the exposition was invariably free of bitterness and full of the sweetness and tenderness that were characteristic of all his work. Lanier had come utterly to deny the existence of abstract bad, least of all in women; and the sex, as though instinctively recognizing its champion, had never failed in due acknowledgment. Of this tribute the artist, true to his ideals, had availed himself only of that which lent itself to a higher conception of art and beauty. He could not help but know his power over women, but he was no more flattered by it than might be an electrical expert by his control of this subtle potentiality. Lanier was a *feministe* in the higher sense of the word—a clean-hearted student of womankind.

Wherefore, he was as startled and surprised at the rush of emotion that Clare had given him as might be the electrical inventor who, in his investigation of what he thinks a harmless form of current, gets a shock that twists him out of shape. Lanier was pondering deeply on this new discovery when a turn in the path brought him in sight of a residence that he rightly guessed to be the Wilmerdings', and with some effort he turned the focus of his thought from Clare and directed it upon the present.

Glancing at his watch he was surprised to see that he was only about fifteen minutes late, which led him to think that Mrs. Wilmerding must have seen his boat put off from the hulk and, after waiting a reasonable time for him to appear, had strolled down the path to look for him, deciding that he had missed the way up the cliffs. He had given himself plenty of time, not knowing how far away the Wilmerding place might be.

An elderly butler opened the door and ushered him into a drawing room that overlooked the sea. As Lanier entered, Mrs. Wilmerding, who had been standing by a window, came forward to greet him. Lanier bowed, almost in the Continental manner, and Mrs. Wilmerding slightly inclined her head. She did not offer him her hand, but indicated a chair facing the window and asked him to be seated, she herself sinking into a Louis XVI arm-chair opposite him. Lanier's appreciative eye observed that she was far prettier than he had thought, certainly not more than thirty-eight, with a charming figure and exceedingly graceful wrists and hands.

"I must apologize for being a quarter of an hour late," said he. "Not knowing where you lived I allowed myself too much time."

Mrs. Wilmerding raised her eyebrows.

"That seems a peculiar reason to offer for being late," said she drily.

"It is really an excellent one," said Lanier. "Too much of anything tends to extravagance. I was extravagant with my time."

"I observed your extravagance," said Mrs. Wilmerding coldly. "I am very sorry; it is the last thing that I should have wished."

Lanier was surprised at her directness and admired it.

"Please let me say how sorry I am to have put you in such a position," said he.

Mrs. Wilmerding frowned. "Perhaps it was for the best," she replied. "I sent for you, Mr. Lanier, because I felt that I might have made a mistake in using my influence to keep you from becoming a member of our colony, and I wanted to explain my position. But now I cannot help but feel that I was quite justified. It was to prevent just such incidents as occurred a few minutes ago that I objected to your membership."

"If you expect to prevent such incidents as that anywhere," observed Lanier, "I must say that I admire your ambition."

Mrs. Wilmerding looked exceedingly annoyed.

"I expect to prevent them in the Chimney Corner," said she, "and I fail to see any reason why I should not. Do you?" And she shot him a challenging look from her very blue eyes, now dark with anger.

Lanier shrugged. "According to Biblical history they were not kept out of the Garden of Eden," he answered, "and that being so, I am inclined to doubt that Mrs. Wilmerding will be able to keep them out of the Chimney Corner. Also I beg to say that if Miss O'Sullivan never receives a less respectful salute than mine she will be an exceedingly lucky girl."

The color came into Mrs. Wilmerding's face.

"Let me tell you how it came about ——" Lanier began, but Mrs. Wilmerding made a swift negative gesture.

"Such things are better not discussed," said she. "I do not wish to hear ——"

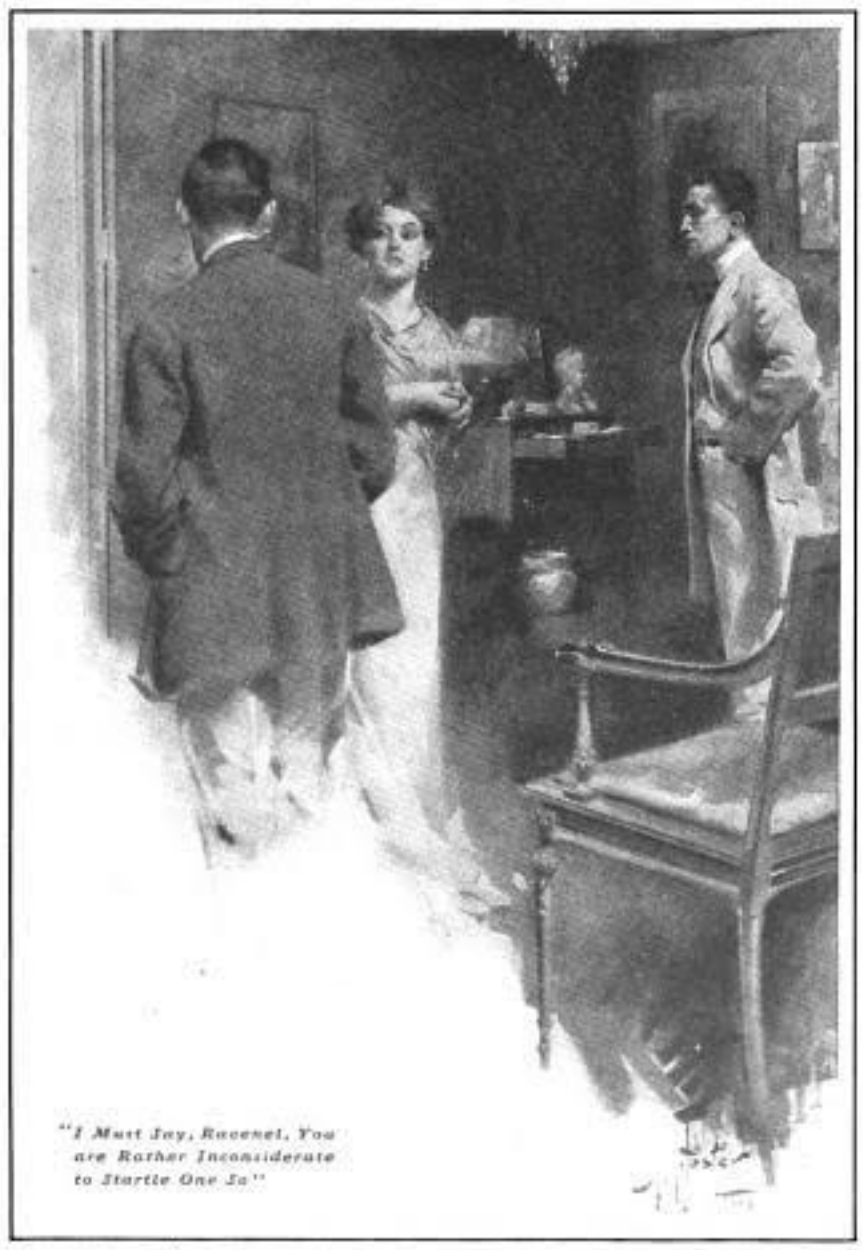
Lanier leaned forward and fastened his compelling gaze on the angry blue eyes opposite. "You have got to hear!" said he decisively. "Your attitude is unkind and unjust. Since you saw what you were not intended to see, you are in honor bound to let me explain it. I came upon Miss O'Sullivan painting, and asked the way to your house. She took me for a member of the colony and asked me if I knew anything about painting. As you may know, I am an artist of some ability, so I put her sketch right for her, then at her request I signed it. When she saw my name she refused to accept the sketch. I intimated that it hurt me to think that my name should be regarded with such undeserved censure, whereupon, being scarcely more than an impetuous child, she had a sudden wave of remorse and gave me a kiss for the picture. That was all."

Mrs. Wilmerding's face was aflame.

"You ought to be ashamed of yourself for permitting an inexperienced young girl to so cheapen herself!" she cried hotly. "Then it was Clare who—who offered you—her lips?"

"I signified that it would be a fitting recompense," said Lanier, suppressing an inclination to smile, yet angry with himself for having told the truth of the affair.

"It is shameful!" cried Mrs. Wilmerding, and looked as if she wanted to cry. "Absolutely shameful! Clare has disgraced us! And as for yourself, I had been told that you were a gentleman, or I should not have asked you to come here ——"



"Stop, Mrs. Wilmerding," said Lanier sternly. "You do not realize what you are saying. It is not Clare who has disgraced the colony, but yourself!"

"What? I? What are you talking about?"

"It is true. You are the one who has brought discredit on the Chimney Corner." Lanier leaned forward, raised his beautifully shaped hand and shook his finger at her as he went on. "A random kiss bestowed in a warm-hearted and impulsive manner is not a very serious affair, Mrs. Wilmerding; but one's given word is a very sacred thing. Your husband passed me his word that I should have my building site, and as his wife you were in honor bound to uphold his promise, made in all good faith. Had there been any doubt in my mind I should have asked for a signed agreement, but as one gentleman to another I did no such thing. You induced your husband to break his faith, which should also have been your faith, and what was the result? I was furiously angry and descended to an act of spite, which I am willing to admit a gentleman should not have done. This made the story public property and the Chimney Corner was advertised as a not too honest organization. So in all justice, Mrs. Wilmerding, leave this poor little girl alone and think of your own not altogether honorable act!"

Lanier had not raised his voice above its usual pleasant and modulated key, but there was something in the inflection, and even more in the strong and virile personality that projected his words, which gave Mrs. Wilmerding the impression of having been transfixed by a very cold, thin blade. It is probable that she had never been so spoken to in all of her pampered life, and the contrast between Lanier's keen-edged presentation of

Retailing the Wooden Nutmeg

SOME OF THE SHODDY WAYS OF LITTLE BUSINESS

By John Mappelbeck

DECORATION BY CHARLES D. MITCHELL

FOR several years the people of the United States have been so busy looking into the crooked ways of Big Business and so anxious to correct them that the crooked ways of what might be called Little Business have been pretty generally overlooked. As a consequence, crooked Little Business has flourished in dishonesty. Having a free hand, it has perfected its methods of swindling; and, operating out of the range of the searchlight of investigation, it has grown almost unchecked. Today the situation in certain lines of business is regarded as acute. The general public has heard little about these conditions; but in the business world, particularly in retail circles, there is serious concern. During the next few years vigorous tradework will be directed to eliminating crooked Little Business through organization, publicity, prosecution and legislation.

Big Business is often crooked only in spots. Little Business, however, is often crooked clear through. As an excellent example, take that curse of the shoe trade known as the "fake sample-shoe store." On the main business street of a factory town, with a considerable foreign-born population, there is an empty store. It has been vacant a year or more. A stranger comes to the owner and offers to rent it by the month. Not much money is offered, but it is pointed out that there will be some revenue after taxes and expenses are met, and that the strange tenant can move out quickly if a permanent tenant is found. If the owner accepts the front of that store quickly blossoms out.

MOST ASTOUNDING PURCHASE
EVER MADE!
FIFTY THOUSAND DOLLARS' WORTH OF SAMPLE SHOES
AT YOUR OWN PRICES!!

Newspaper announcements tell the story at length. This remarkable collection of drummers' samples includes shoes of expensive makes from famous factories. It has been purchased at a low price, with the express understanding that the shoes be taken out of the Eastern market, preventing disruption of the regular shoe trade.

In the windows of the fake sample store and in showcases inside are shown shoes of good quality, priced anywhere from ninety-eight cents upward. Prices are always fractional—never even dollars or dimes. That gives an appearance of close figuring. The display shoes are bound to convince passers-by, because they are standard products of first-class manufacturers, shown for that very purpose. When a customer asks to be fitted with shoes like a certain sample in the window, however, he is shown shoddy goods of fair appearance, made to resemble the sample. The clerks employed in such an establishment are men well versed in human nature and up to all the dodges. They receive their pay in commissions instead of salaries; and, as the stock bears no price marks of any sort, they are free to charge what they think the customer will pay. The higher the price that can be got for a given shoe, the more commission to the clerk.

Sometimes the customer insists on having a pair of shoes in the window or showcase—they are just his size and he will accept nothing but that identical pair. Then the clerk takes the shoes out; the customer sees them actually wrapped and goes away confident that he has not been deceived—but he has, nevertheless, for the wrapper knows what to do in such emergencies. Shoddy duplicates are kept under a table and the clerk substitutes a pair of these for the sample shoes. If the customer comes back the store's organization deals with him in various ways. Sometimes it denies ever having seen him before, and when he produces the shoes says they were not bought there. If he is willing to listen to reason a clerk exchanges goods for something a little higher in price, and the customer goes away with shoes just as cheap and worthless. If the customer wants war he can probably get that too—the organization throws him out on the sidewalk!

The Bait That People Jump At

A SHOE-TRADE journal editor estimates that many millions of dollars' worth of shoddy shoes are sold annually in this country through the fake sample stores. There is a swindle in the very assertion that their stock consists of drummers' samples; for every sample shoe made up in the regular trade is of standard size—that is, each sample of men's shoes used in selling is uniformly "size 7 width C," and in women's shoes "size 4 width B." Therefore, the shoemen who did a large volume of business in real samples would have to select customers whose feet were all the same size. The goods sold in these establishments come from prisons or shoddy factories, and are distributed through jobbing concerns that specialize in them and frequently own an interest in the fake sample store. Materials are "splits" and side leather, condemned leather, compressed paper, imitation leather—and so on. The hard-working laborer who pays two-sixty-eight for a pair of such shoes may be under the impression that he has cut out a middleman's profit somewhere—until the first rainy day, when his bargain goes to pieces.

The legitimate shoe dealer is a merchant with honest stock, selling goods at reasonable profits, sticking to the same location year after year, ready to exchange goods, and paying taxes and doing his duty as a citizen. He has enough legitimate competition to keep his mind occupied, as a rule; but the fake shoe store is not regarded as competition. He knows that it is a downright swindle and regrets the loss to the public and the harm done the shoe business. Occasionally such a merchant undertakes to expose the fake sample-shoe store single-handed. The outcome has been compared to a catch-as-catch-can match with a skunk. The fakers delight in such an adversary, set up a loud cry of "Persecution by the Shoe Trust!" and make capital of the opposition. Merchants have, therefore, held aloof, in the hope that the fake sample-shoe store would eventually run its course and disappear. Instead, it has merely grown stronger. That sort of business is plain fraud. There are laws against fraud, but nobody has been interested in collecting evidence and conducting systematic prosecution in the courts. The end of this unsavory branch of Little Business will come when merchants in each community organize for exposure and prosecution.

Another familiar fraud is the fake bankrupt stock of men's clothing or furnishings. Often where an empty store on a leading business street can be secured at low rent from month to month, it blossoms out, backed up by some fictitious story of damage done by a fire that never happened or of goods involved in the bankruptcy of a house that never existed.

In New York the compiler of a trade directory of clothing and furnishing firms has found a steady demand for affidavits. One of these establishments opens in a Middle-Western town, loudly advertising a stock "purchased at fifteen cents on the dollar, to wind up the bankruptcy of the famous house of Bottom & Bottom, New York." The regular merchants of that town sometimes get together and telegraph the directory man, who makes an affidavit something like this:

As compiler of the standard directory of the men's-clothing and furnishing-goods trade for twenty-five years, I have personal knowledge of every house engaged therein. The firm of Bottom & Bottom has never been listed in our directory; the name is not found in any New York city telephone or trade directory; I have never known or heard of such a firm. To the best of my knowledge, it has never been engaged in the clothing or furnishing-goods business in the city of New York.

That affidavit, telegraphed back, is then published in the town invaded by the fake bankrupt concern.

These frauds go to great lengths in deception by the use of well-known tradenames. There may be a make of underwear enjoying a national reputation under the trademark Standard, for instance. The faker will display some genuine suits of this brand, marked at very low prices, and substitute a cheap imitation when customers buy. Or he will exploit his imitation under a similar name—as Stanford. Another common trick is the sign in the window: "This Standard style underwear, eighteen cents a garment"—the word "style" being printed in almost microscopic letters.

Some manufacturers have taken steps to protect their trademark rights by photographing tricky window displays and obtaining other evidence; but this is costly work and only checks the faker in one of a thousand deceptions. The remedy here, too, seems to lie in merchants' organizations for the prosecution of frauds. Not long ago, in a large Southern city, all-wool suits were advertised at

The Last Stand of the Buffalo

The Last Eight Hundred Buffaloes Alone Stood Between the Species and Utter Extinction

By WALTER NOBLE BURNS

ONLY eight hundred buffaloes were left alive in the world in 1895. The year marked the minimum numerical strength of a race of animals whose former population in North America has been estimated at sixty millions. The last eight hundred buffaloes alone stood between the species and utter extinction. If by any chance these few survivors had been wiped out of existence the buffalo would have become one forever with the dodo and the mastodon.

By so slight a tenure did the buffalo cling to racial existence that preservation seemed a forlorn hope; but the buffaloes rallied in their last ditch. The tattered remnants of the once mighty herds began slowly to increase. Today it is possible to assert confidently that the crisis is passed and the future of the buffalo is assured.

Within the past few years the United States and Canada have established herds of buffaloes on Government ranges that reproduce as nearly as it is possible to do under fence the conditions under which the buffalo lived in the wild freedom of prairie days. Left to themselves in these spacious pastures, the buffaloes may be depended upon to work out their own salvation—slowly but surely.

The United States now possesses three buffalo parks. These are the Wichita national bison range in Western Oklahoma, the Montana national bison range in Northwestern Montana and the fenced-in range in Yellowstone National Park. Canada is breeding buffaloes in Rocky Mountain Park at Banff, and in Elk Island Park; but its great buffalo nursery is at Wainwright, in Alberta, where it has established the most extensive fenced-in game preserve and the largest herd of buffaloes in the world. The herd now numbers more than a thousand head.

Opportunities We Have Lost

THE policy of the United States in dealing with the problem of buffalo preservation has been marked by niggardliness and a woful lack of sentiment and spirit. It is to the American Bison Society that all the credit must be given for putting the buffalo in this country on a safe footing for the future. The original herds in all three national parks have been gifts to the Government. The nucleus herd in Yellowstone Park was the gift of C. J.—"Buffalo"—Jones, who purchased the animals and had them transported at his own expense to Yellowstone Park. The nucleus herd on the Wichita range was the gift of the New York Zoölogical Park. The nucleus herd on the Montana range was the gift of the American Bison Society.

The work of Canada has been in munificent contrast. It is a sad commentary on the parsimonious and dilatory policy of the United States that Canada obtained most of its buffaloes from this country. The original Wainwright herd was bred on the Flathead Indian reservation in Montana. Michael Pablo, a half-breed Indian, its owner, was compelled to sell it when the reservation was about to be thrown open to settlement. He loved the buffalo. He wanted them kept in the United States. He wanted them kept if possible in Montana, on their old range. He wished them always near him. The sight of them wandering over the hills stirred the aboriginal strain in his blood like an echo from the past, when the great herds blackened the prairies and Indian villages smoked by every stream. He tried hard to induce the United States to establish a national park in the Flathead reservation and purchase his buffaloes with which to stock it.

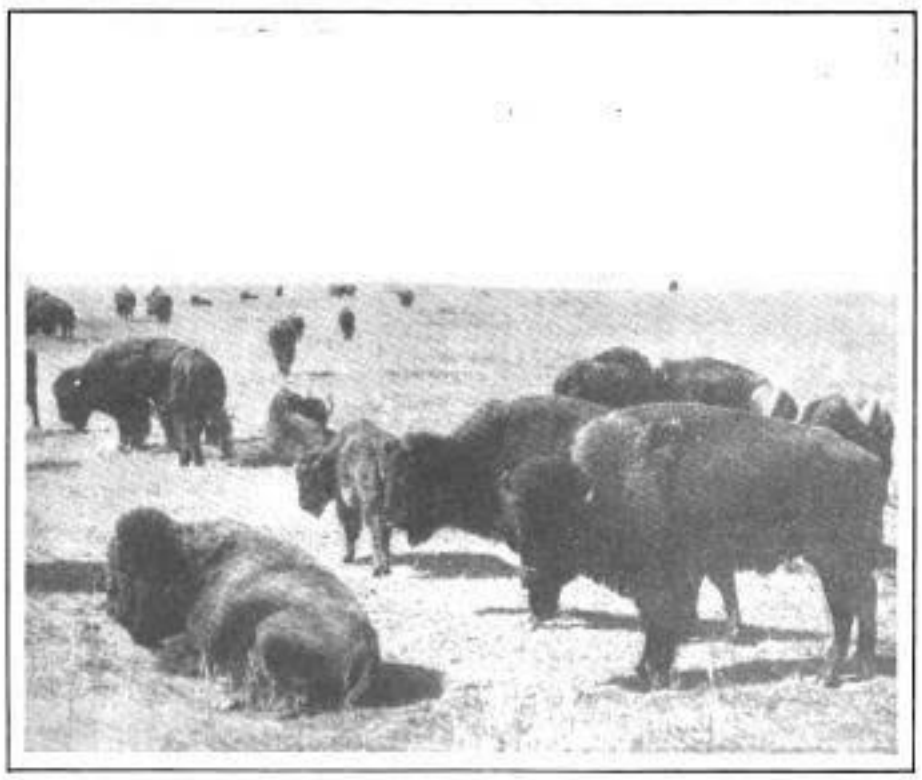
Did the opportunity thus presented kindle in the breasts of the senators and congressmen at Washington a sentimental enthusiasm in the cause of a noble and dying race of wild animals—an enthusiasm touched with poetry and akin to patriotism? It did not. The Government authorities gave old Pablo's proposition scant consideration and promptly turned it down.

A. Ayotte, Canadian immigration agent at Missoula, Montana, heard of the United States Government's refusal. He hired a cayuse without delay and rode sixty miles to Pablo's ranch. The old half-breed took him out into the mountains and showed him the magnificent brutes at pasture on their wild range. When he started back to Missoula Mr. Ayotte had an option upon the herd. When he reached town he rode straight to a telegraph office and wired Pablo's price to the Canadian government. The Canadian authorities did not wait to write. They wired back: "Buy the entire herd at once!" And Mr. Ayotte did. In shame and bitterness of spirit all Americans interested in the buffalo saw the great herd pass eventually across the border into alien hands.

However, if the United States let one magnificent opportunity slip through its fingers it still has a chance to redeem itself. The American Bison Society is now in the midst of a vigorous campaign to induce Congress to establish a fourth national buffalo park in the Black Hills country of South Dakota. A survey of the land has been made under the direction of the society. The proposed site includes the Wind Cave National Park and adjacent lands, with a total area of seventeen thousand acres. If the park is established the Bison Society will present to the Government a herd of not fewer than twenty-five buffaloes.

Right at hand for the stocking of the new park is the Philip herd, at Fort Pierre, South Dakota, now the largest herd in the United States. The herd was bred by the late James Philip from five buffalo calves captured in a hunt on Grand River in 1881.

"There are now in the herd three hundred full-blooded buffaloes and I think they are the finest specimens in existence," writes Mr. George Philip, administrator of the James Philip estate. "They are allowed to run at large in a pasture of about twelve thousand acres in the Missouri River brakes about six miles north of Fort Pierre, and make their way both summer and winter without being fed any hay. So you see they are as near the natural buffalo as present-day conditions permit. It is only a question of time when the Philip estate will find it necessary to dispose of the herd, and I should like very much to see the National Government take it over and keep it intact."



Though Congress has established parks and provided funds for the maintenance of national herds, it never has purchased a single buffalo. The American Bison Society has been thankful for small favors, and has hesitated to ask more for fear of causing a reaction that might prove hurtful to its cause. To friends of the buffalo it would be in the nature of a tragedy if this fine herd were broken up; but it seems too much to hope that the Government will buy it. If danger of its dispersal were imminent Uncle Sam doubtless would stand by, twiddling his thumbs apathetically, as in the Pablo episode, and see it sold over the border or disintegrated by private purchase.

Policies of Preservation

POPULAR subscription might save it for the nation; but popular subscription in the cause of the buffalo is slow and difficult work. The American Bison Society tried it once. It had about all it could do to raise the ten thousand dollars with which the herd for the Montana national park was bought. The sentiment for the preservation of the buffalo was apparently quite keen throughout the country, but it was surprising how much of it suddenly evaporated when there seemed to be a prospect of its involving the pocketbook. One other hope remains for preserving the integrity of the Philip herd. That lies in the possibility that some millionaire or wealthy individual may become sufficiently interested to purchase the herd and present it to the nation.

With the establishment of the park in South Dakota, but one other important detail in the American Bison Society's general scheme for the national preservation of the buffalo will remain to be accomplished. That is the transformation of Antelope Island, in Great Salt Lake, Utah, into a national buffalo park. The island is twenty miles northwest of Salt Lake City. It is about sixteen miles long, from one to five wide, and contains between 25,000 and 30,000 acres. Officers of the American Bison Society have looked it over and declared it would make an ideal buffalo range. It is a mountainous island containing fine natural pastures for summer and winter grazing, and it is abundantly watered. A herd of buffaloes numbering about one hundred at the close of 1911 runs wild upon the island. Both island and buffaloes are owned by Mr. John E. Dooly, of Salt Lake City. The movement to convert the island into a Government park has progressed far enough to warrant the belief that within the next year or two it will be added to the nation's buffalo pastures. It is to be hoped the entire Dooly herd will be purchased and kept upon the island. If Congress cannot see its way clear to do this the herd is so small that its purchase price unquestionably could be raised by a vigorously conducted campaign of popular subscription.

There are several reasons why a number of comparatively small parks are preferable to one or two very large ones. Authorities agree that, in a wild state, no herd of animals ever deteriorates through inbreeding. A number of unrelated herds

Americans Saw the Great Herd Pass Across the Border Into Alien Hands

Digitized by Google

bred in widely separated parts of the country will obviate the possibility of danger from this source, as new blood may be introduced at any time by the transference of bulls from one range to another. Moreover, there are few places in the country where very large parks of good pasture land can be established without inclosing areas that will be wanted for agricultural purposes more and more insistently as the West becomes more thickly settled. With national parks in Montana, Oklahoma, the Yellowstone, South Dakota and on Antelope Island there would be ample provision for the maintenance of expanding herds of buffaloes for fifty or a hundred years to come. The acreage of these five parks would take care of from ten to fifteen thousand buffaloes, self-sustaining on land that no farmer would covet.

The latest figures of the American Bison Society, compiled by Mr. William P. Wharton, secretary, bring the census of the buffalo up to January 1, 1911. The figures are as follows:

Buffaloes of pure blood in captivity in the United States	1331
Buffaloes of pure blood in captivity in Canada	954
Buffaloes wild in the United States	25
Buffaloes wild in Canada	450
Total buffaloes in North America	2760

Here are later figures which were obtained by myself in the fall of 1911 from wardens and superintendents of national parks, or are estimated, the estimates being carefully based on the last census of the American Bison Society and upon my own knowledge of the number of breeding cows in the herds. These figures, so far as they go, are really the census figures for January 1, 1912:

Montana National Bison Range	70
Wichita National Bison Range	30
Yellowstone Park—in captivity—estimated	140
Philip Herd, South Dakota	300
Antelope Island Herd, Utah—estimated	100
Goodnight Herd, Texas—estimated	140
Conrad Herd, Montana—estimated	60
Corbin Herd, New Hampshire	120
Pablo Herd, Montana—estimated	80
Wainwright Herd—Canada	1031
Other Government Parks in Canada—estimated	80
In United States owned privately or scattered among city parks and zoölogical collections—estimated	388
Total	2539

It is difficult for the modern American, whose knowledge of the buffalo is confined largely to specimens in zoölogical gardens, to realize the vast numbers that formerly inhabited North America. In its former range the buffalo touched tidewater along the Atlantic Coast in Maryland, Virginia, North and South Carolina and Georgia. Its northeastern limit was in New York at the eastern end of Lake Erie, its southeastern near the mouth of the Altamaha, in Georgia. It never was found in Central or Eastern New York, Canada east or north of the Great Lakes, the states of New England, Central or Eastern Pennsylvania, New Jersey, Delaware or Florida. It made its home in all the other states east of the Mississippi River, with the possible exception of Michigan. West of the Great Lakes its habitat was bounded by a line extending from Chicago northwesterly to Great Slave Lake, then southwesterly to the Rocky Mountains. The buffaloes overflowed into British Columbia through passes in the mountain rampart north of the international boundary. They were found in Idaho, on the slopes of the Blue Mountains in Eastern Oregon, in Northeastern Nevada, the northeastern half of Utah, in Colorado and in New Mexico as far west as the Rio Grande del Norte. They extended into Mexico as far south as the twenty-fifth parallel. From the southwestern limit of their range to the delta of the Mississippi they were abundant. They never reached California and, so far as known, never glimpsed—even distantly—the blue waters of the Pacific.

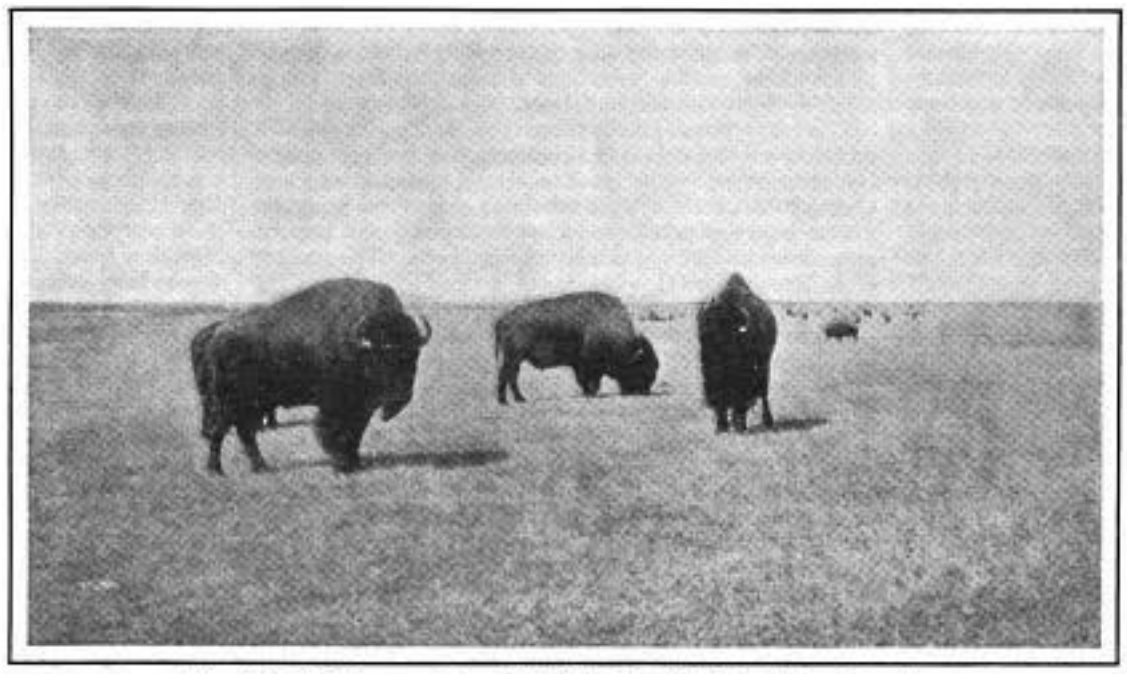
A Shameful Carnival of Butchery

THE extinction of the buffalo is the most murderous and shameless chapter in the history of man's dealings with wild brutes. Buffaloes were in Western New York in 1800, and in Ohio as late as 1812. They were practically extinct east of the Mississippi River by 1820. A few stragglers slain in Wisconsin in 1830 were the last buffaloes killed east of the great river. The country between the Mississippi and the Rocky Mountains, the Rio Grande and Great Slave Lake, was one great buffalo pasture. It is estimated that it held forty million buffaloes in 1800.

The advent of the railroads marked the beginning of the end for the Western buffalo. The Union Pacific divided the buffaloes into two great divisions known thereafter as the southern herd and the northern herd. The two herds withdrew farther and farther from the terrible iron horse and the deadly hunters who swarmed along its sinister steel trail, and they never were reunited.

By 1871 the Atchison, Topeka & Santa Fe and the Kansas Pacific railroads had been built, both through the heart of the southern range, opening its remotest corners to Eastern markets. As if fate itself had marked the buffalo for quick extermination, the breech-loading rifle reached perfection at this time. The buffalo range suddenly became a bonanza land and the inrush of hunters has been compared to the stampede to the California goldfields in 1849. Good shots could kill from forty to sixty animals a day, and hides sold at one dollar and twenty-five cents. Merchants in the railroad towns grubstaked and outfitted hunting parties. Dodge City, Wichita and Leavenworth became centers of the buffalo trade. The chief business of the entire country became the destruction of the buffalo.

Still-hunting was the method employed. From the crest of a ridge, from an arroyo, from behind a clump of sagebrush, the hunter opened fire. So long as he remained concealed the buffaloes would not run. They would look curiously at each puff of smoke and bellow as they sniffed the blood of their dying comrades, but stupidly remain to be picked off one by one until the last had fallen. It was no more a sportsman's game than killing beeves in an abattoir with a sledge-hammer. It was business pure and simple, murderously effective and immensely profitable. A single hunter annihilated a herd in a day. Records of more than a hundred buffaloes killed in an hour from one stand were not uncommon. In the hunting season—from November to February—no hired hunter was considered worth his salt who failed to kill from one to three thousand. The season's kill of the most expert hunters ran far above this.



At the beginning of 1871 the southern herd numbered about four millions. It had been wiped out of existence by the end of 1874. Into those four years was crowded the most tremendous slaughter of wild animals in the history of the world. When the carnival of butchery was at its height the plains were mighty shambles tainted with the pestilential savors of thousands of carcasses. Fat years were these for the buzzard and the coyote. In 1871 the prairies were black with living buffaloes. In 1874 they were white with their bones.

The survivors of the great slaughter fled southward to the Llano Estacado. Scattered bands lingered about the headquarters of the Republican River and in Southwestern Nebraska until 1885. Wild buffaloes were seen for the last time in Kansas, in the extreme southwest corner of the state, in 1886. Fifty-two were killed near Tascosa, Texas, in 1887. Four killed in 1889 near Buffalo Springs, Texas, are believed to have been the last survivors of the southern herd.

The fate of the northern herd was staved off for a few years after the southern herd had been wiped out, by the presence on its range of Indians hostile to the whites and by the absence of railroads. The Northern Pacific road was built to Bismarck in 1876. It became the outlet for robes and hides shipped by boat from the headwaters of the Yellowstone and the Missouri. It was not until 1880 that the road was extended west through the center of the buffalo country. In 1876, according to Doctor Hornaday's estimate, the herd numbered a million and a half. By 1880 it had dwindled to one million. In 1881 there was a rush of hunters to the northern range that rivaled that to the southern range a few years earlier. In 1882 there were five thousand hunters and skinners on the range.

The still-hunt again was the only method employed, and robes and hides were worth three and four times as much as on the southern range. The butchery was at its height in 1882. The Northern Pacific shipped out fifty thousand hides in 1881, two hundred thousand in 1882, forty thousand in 1883, and only three hundred in 1884. These shipments are an isotherm marking the rise and fall of the slaughter. The end came without the hunters themselves being aware of the exterminating character of their work. In the autumn of 1883 many hunting parties were outfitted at heavy expense and struck into the range only to learn through bankruptcy that the buffalo had gone forever.

Toward the close of the season that marked the extermination of the northern buffalo a herd of fifty thousand crossed the Yellowstone River near Fort Keogh, and disappeared in the northern wilderness. When the range grew green the next spring settlers and Indians furbished up their rifles and watched the northern horizon for its return; but they watched in vain that year, and the next, and the year after. The last great herd passed into tradition as the lost herd. The belief grew that it had escaped the slaughter and had found refuge in the wild country between the Peace and Saskatchewan Rivers, in Canada. To this day, in the cabins of gray-bearded pioneers and the teepees of Indians in the Northwest, you may find men who expect to wake up some fine morning and gladden their eyes with a sight of the lost herd once more at pasture on its old stamping grounds. Alas, that their dream never can come true! The great herd in its northern migration never reached the Canadian border. It was wiped out to the last hoof by white hunters along the upper reaches of the Missouri River.

They Would Bellow as They Sniffed the Blood of Their Dying Comrades

The Lost Herd

ONLY a few stragglers of the great northern herd were spared. Two hundred survived for a few years in the broken country west of the Musselshell River, in Montana. These eventually were killed. Two hundred found refuge in Yellowstone Park. Many of these were slain when they strayed out of the protected area. The last buffaloes of the northern herd that kept to the open range were killed in 1886 on Big Dry and Big Porcupine Creeks, in Montana, by Dr. William T. Hornaday at the head of a Smithsonian Institution expedition. The doctor and his companions killed twenty-five. A number of these were mounted and are now in the National Museum, at Washington.

The future of the buffalo seemed dubious when the American Bison Society was organized in 1905 and began its work for the preservation and upbuilding of the race. The buffalo never had more devoted friends than Dr. William T. Hornaday and Ernest Harold Baynes, who were chosen president and secretary of the organization. Doctor Hornaday, now director of the New York Zoölogical Park, is without question the greatest living authority on the buffalo. The first signal achievement of the new society was the creation of the Wichita national bison range.

When the Kiowa-Comanche reservation in Southwestern Oklahoma was thrown open for settlement, in 1901, sixty thousand eight hundred acres were set aside by Congress as a national forest reserve, embracing the Wichita Mountains and the adjacent plains. The region included some of the best grazing ground of wild herds in early days. The American Bison Society offered to provide fifteen buffaloes as the nucleus of a national herd if the Government would fence a range in the Wichita forest reserve. The offer was accepted. An appropriation was made by Congress and twelve square miles in the heart of the reserve were inclosed by a high meshwire fence. At the suggestion of Doctor Hornaday, the New York Zoölogical Society donated the buffaloes, which originally had been a part of the Austin Corbin herd, in New Hampshire. They included one bull five and a half years old, one bull three and a half years old, two bulls two and a half years old, one spike bull yearling, one bull calf six months old, six breeding cows, one cow two and a half years old, one cow one and a half years old, one cow calf six months old. These animals represented four distinct strains of blood, and the oldest bull was not related to any other member.

They were shipped from New York in separate crates in palace stock cars forming part of a fast passenger train,

Digitized by Google

and were unloaded at Cache, Oklahoma. From Cache they were transported on wagons twelve miles across the prairie to their new home. They were turned into the range in October, 1907.

Wichita Park consists of wooded hills and open rolling prairie, covered with mesquit grass, buffalo grass and blue-stem. The water supply is abundant and constant. A fine spring in the northern portion of the range is the source of Cache Creek, which flows the entire length of the range. The hills are timbered with black-jack and post oak and form an excellent winter shelter. The winters are mild. There is little snow. The buffaloes require no artificial shelter and there is fine winter grazing.

Warden Frank Rush writes, however, that in winter he feeds the buffaloes hay, cane and Kafir corn. This custom probably will be abandoned as the herd grows. It is necessary now because the buffaloes are zoölogical-park animals that have lost the instinct to rustle for themselves, especially when snow covers the pasture. The warden, moreover, hesitates to force the buffaloes to rustle for themselves, for fear they might come through the winter lean and enfeebled, and not in condition to fight against a possible attack of Texas fever. The entire Wichita forest reserve was formerly the grazing ground of thousands of range cattle and became infested with the tick which produces that dangerous epidemic. Buffaloes are not less subject to this malady than cattle. Two buffaloes died from the fever after reaching the range.

To guard against the tick, each buffalo is sprayed annually with crude petroleum shot from a hose. This antiseptic bath kills the tick and renders the animal immune from attack so long as the odor endures. During the period of danger the buffaloes are kept under close observation in an inclosure of two hundred acres, which has been burned over. According to Warden Rush, the tick is gradually being eradicated from the entire forest reserve and now offers no serious menace to the herd.

In its four years in Oklahoma the buffalo herd has doubled in size, numbering thirty head at the close of 1911. This rate of increase is considered satisfactory, as there are now only eight breeding cows. In a recent letter Warden Rush said: "The herd should increase in the next two years to forty-five; and after that, of course, much faster."

Eight antelopes and six elks have been colonized in the park and are thriving. These animals were shipped from Yellowstone Park. No finer antelope pasture could be found on the continent than these prairies of mesquit and buffalo grass. A few white-tail deer were inclosed in the park when the fence was built. They have dwelt among the hills and it is estimated they now number eighty.

At Home in Their Native Haunts

THE Montana national bison range was established in 1909. The American Bison Society selected and surveyed the range, and again agreed to supply the herd if the Government would provide the park. With a congressional appropriation of forty thousand dollars, twenty-nine square miles were purchased and fenced in the Flathead Indian reservation in Northwestern Montana. The site was the best portion of the former range of the Pablo herd. It lay along the Northern Pacific Railroad, the nearest stations being Ravalli and Dixon.

With ten thousand five hundred and sixty dollars raised by popular subscription the bison society purchased thirty-four buffaloes from the Conrad herd, near Kalispell, Montana, seventy miles distant from the park. The price paid was two hundred and seventy-five dollars apiece for the buffaloes delivered on the range. The purchase consisted of one bull five years old, two bulls four years old, two bulls three years old, three bulls two years old, four bulls one and a half years old, three cows six years old, seven cows four to five years old, three cows three years old, five cows two years old, four cows one and a half years old. A gift of two additional animals was made to the society by Mrs. Alicia Conrad, administratrix of the Conrad estate. Of this pair Mrs. Conrad wrote:

"We have selected for this gift the finest pair we own—Kalispell Chief, a nine-year-old male, an animal to which we believe it would be difficult to find an equal in the world today; and, as his mate, the herd leader—a vigorous, sagacious cow, having a calf every year—a cow which will be of the greatest value to the new herd. We have depended upon her wise head and good sense in our management of the herd and have no cow to equal her."

The herd arrived at Ravalli, at the edge of the park, in October, 1909. "As the crates were opened," writes Doctor Hornaday, "the bison backed out of them, looked about for a moment, saw their Paradise Regained looming up across the Jocko River, splashed across the stream and climbed up into their new home."

Eleven gift buffaloes from the Philip, Dooly, Corbin and Goodnight herds swelled the total of the new herd to forty-seven. These have increased to seventy, nineteen calves having been born in the spring of 1911. There are now twenty-three breeding cows in the herd.

The Montana park is a fenced-in mountain, with connected pastoral ridges and with wide level meadows along the watercourses. The river flats are about three thousand feet above the sea. The highest peak is Quilseeh, or Red Sleep Mountain, forty-eight hundred feet above the sea. From its summit the land slopes away in every direction. On the south it drops to the Jocko River; on the west to the Flathead River; on the north to Mission Creek; and on the east to Mission Valley. These streams are fed from melting snows in neighboring mountain ranges and are never dry. Abundance of pure water also is supplied by many large springs. Through almost every ravine in the park sparkles a rivulet of crystal spring water. In some places these brooks have been dammed to form ample drinking basins for the buffaloes.

The pasturage is chiefly bunch grass. This grows lush and deep on the slopes, in the draws and ravines, and on the river vegas. The great central pyramidal mass of Quilseeh Mountain and its adjoining ridges and summits are smoothly carpeted with grass in summer and present an appearance of huge velvety rolling lawns. The grass is often knee-deep. It cures on the ground and affords the finest of winter grazing.

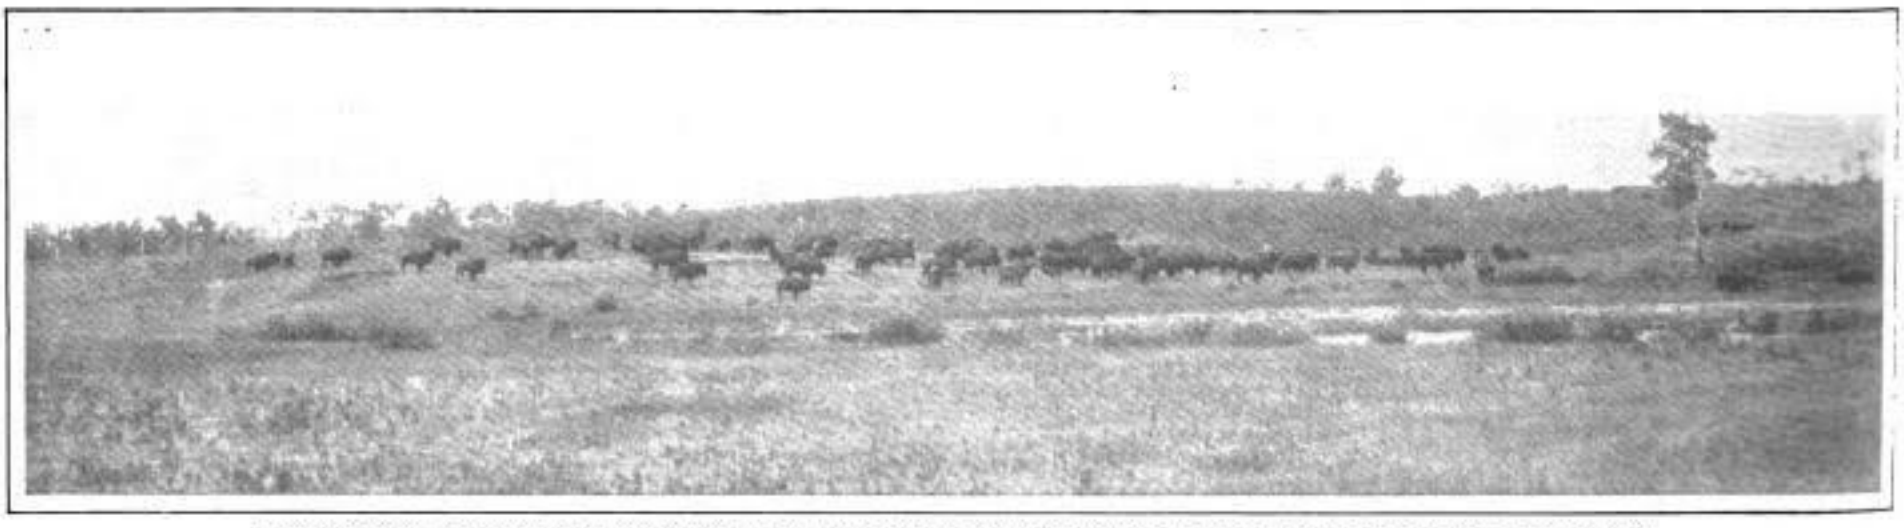
There is a scattering of yellow pine, Douglas fir and rock maple on the ridges. The southern slopes of several of the peaks are covered from base to summit with sparse timber of this sort.

Along the streams, cottonwood, birch, aspen, alder and willow grow thick. These timber belts are, as a rule, not broad, but in places they spread into considerable groves. In summer the buffaloes haunt these shady copses, wallowing in the cool loam, standing half asleep on some golden shingly bar in the shadow of verdurous banks, or plunging up to their flanks in some pellucid waterhole. In winter the same tangled thickets are splendid coverts against wind and storm. Abundance of winter shelter also is offered by the ravines, the deep pockets among the hills and the secluded valleys. No matter from which direction a storm blows, the buffaloes can find shelter by moving from one side of the range to the other. There is protection from cold blasts and driving snow to be found in coulée or ravine in every part of the park. Sheltering the entire park, in a way, and adding to the beauty of its situation, mountain ramparts, seen across valleys and broken land, shut in the horizon on all sides.

The Montana buffaloes are not fed hay—or anything else—summer or winter. They run practically wild all the year round. When the range is deep with snow there is always some grazing ground blown bare by the wind; but the buffaloes do not depend wholly upon the windswept patches. With an instinct handed down from their wild ancestors, they find the grass by nosing or pawing away the heaviest snows. They will grow fat on a winter range where domestic cattle would starve to death.

The winters are comparatively mild. The mercury rarely falls below zero. The snowfall is sometimes heavy, but there are frequent chinook winds that blow through the gaps of the western mountains or overflow across the lower ridges, bearing a touch of warmth from the Japan current, that tempers the climate of the Pacific Coast. In consequence of these mild winds snow rarely lies long on the buffalo range.

Eight antelopes and six elks have been added to the range. The antelopes were shipped in December, 1910, from Yellowstone Park. The elks came from Jackson Hole, in April, 1911. According to Warden Andrew R. Hodges, more antelopes and elks are soon to be introduced. It was the original idea of Doctor Hornaday and the bison society people to stock the range with a herd of twenty-five antelopes. Antelopes increase much more rapidly than buffaloes, producing two young at a birth and breeding at an earlier age. Buffalo cows never breed until they are three years old, and only about fifty per cent of them breed then. Black tail and white tail deer, and perhaps mountain sheep, will be placed in the park later on. The sheep, it is believed, would do well among the ridges.



A Paradise for the Bison

"THE American people," writes Doctor Hornaday, "have thus become owners in perpetuity of what we believe to be the richest and most beautiful grazing grounds ever trodden by bison hoofs. I have seen the best portions of the buffalo plains all the way from the Texas Panhandle to the Sweet Grass hills of Northern Montana; and for abundance of rich grass, pure water, winter shelter, picturesque interior and surroundings, the Montana national range is beyond compare. I cannot conceive how any range for semi-wild animals can be more perfect or beautiful. It contains eighteen thousand five hundred and twenty-one acres, and it can support fifteen hundred buffaloes, five hundred antelopes, one hundred deer and one hundred elks, all of which in good time I trust will be seen there busily engaged in perpetuating their species. It is my opinion that, as it is today established, the Montana bison herd alone will be sufficient to save the species from extinction, and that within our own times it will make good to us the loss of the Pablo herd to Canada."

The Government herd in Yellowstone Park numbers about one hundred and forty head. For years it did no more than hold its own, but recently it has begun to increase rapidly. It has been necessary from the beginning to feed the animals hay in the winter. Much of this hay is alfalfa, grown in the park. Hay is scattered also over the open range for five or six hundred antelope, eight hundred black-tail deer, one hundred white-tail deer, a small band of moose and about forty thousand elks, now in the park. Major H. C. Benson, superintendent of the park, in his last report says new meadows on which to cut hay for the buffaloes must be found, owing to the growth of the herd, and he asks for an increase of from three to four thousand dollars in the annual appropriation for the herd's maintenance.

The fenced-in range of the buffaloes is divided into what is known as the upper and lower corrals. The upper is a six-hundred-acre tract on hills adjoining Lamar Valley; the lower a four-hundred-acre tract in the valley. The buffaloes are kept in the upper corral in summer, while the grass in the lower corral is permitted to grow. In the fall about one hundred tons of hay are cut from the lower corral and stacked for winter feeding, and then the buffaloes are turned into it to spend the winter. These corrals will be too small for the herd in a few years. The pasturage is husbanded even now. In summer the buffaloes are grazed daily on the open range outside the inclosure, in charge of cowboys, and put back in the corral at night. They have become almost as tame and tractable as domestic cattle.

THE RECORDING ANGEL

A Party on Mrs. Fanning-Rucker's Lawn Was Like an Expurgated Picnic

XV

By CORRA HARRIS

ILLUSTRATED BY WALTER H. EVERETT

THE time to write a story is after all the characters who figure in it are dead. While they still live, God holds the sequel in the hollow of His hand. You see them only going forward in it with their backs to you upon secret errands which should be included in the chronicle if you only knew what they were; or coming to meet you with enigmatical faces that baffle interpretation. An author may invent his own plot if he creates his own heroes and heroines, but if he takes them from life he is often as much in the dark as the reader is as to what the issue may be. Moreover, if the scene is laid in a village like Ruckersville all the characters that belong do not get into the scene. There is room enough for them in the life of the town, but not power enough in the author to set them moving without their jostling each other and spoiling the literary art of composition by crowding the stage of action. The Great Dramatist is the only one who is able to accomplish this and give each a perfectly defined minor part.

Ruckersville was a town of five hundred inhabitants, every one of whom actually played his or her rôle in this story, but you will observe only about a dozen figures here by name. For example, I have been obliged to leave out a very prominent character in an old St. John preacher. He was the pastor of what the other Christians called the Campbellite church, and what he and his little hen-flock called the Christian church. He was even at that time the father of a man who has but recently become one of the Justices of the United States Supreme Bench. But to have known him at that time one would have been more likely to suppose he would become the father of a great poet or a great saint. God has a curious way of choosing the material for national characters. They do not grow as often as they might be expected to upon the hilltops of publicity. They rise mysteriously gifted from charming obscurity. This country of obscurity, by the way, is that section which really produces the greatest men. They come up in it and flourish like seeds planted in deep soil—the soil of humanity fertilized by the great simplicities of faith and virtue.

This old preacher, who was so detached that he was never involved by Jim Bone's new activities and, therefore, does not figure in this story, was really the most potential character in the town, if you considered him according to the will of God in the affairs of men. As it was, nobody considered him at all. He was very old, grizzled, nearly blind, a trifle stooped in the shoulders. On Sabbath afternoons it was his custom to read some verses of Scripture in his little church far out upon the sunny rim of Ruckersville, expound them so simply and tenderly that one might have marveled at the contrast by which some theologians confound the gospels with commentaries. Yet he was himself the author of two immense volumes of this character! And he administered the sacrament with the pleasing courtesy of a host in his Father's house.

I have also been obliged to omit the editor of the Ruckersville Star, a little mouse-colored man who went about collecting news for his paper with the straining despair of a man squeezing blood out of a turnip. There is not a more comical or pathetic figure in any village life than this one. But I am unable to quote even an extract from one of his editorials, they were so removed from any real interest in life. And so far the doctor has been omitted. But for Agnes Yancey, he would never have appeared in these pages, in spite of the fact that, next to the reigning pastor of the leading church, he exercised more influence over the women than any other man in the town. You must have observed that, though men are naturally and healthily opposed to obeying doctor's orders, so that most of them die honorably and bravely refusing to take their tonics, women are inclined to make a piety of quoting what their physician says and of yielding him an obedience that they do not know how to render the very Maker of their exaggerated beings. The doctor is the dictator of their physical existence. He appeals to the only nerve of their courage. And they are willing to crucify themselves taking nostrums, which in many cases the distracted man only prescribes to humor their distempered minds. Agnes Yancey, as you might have easily inferred from the negativity of her character, belonged to this class. She was a professional invalid only because she had missed her natural vocation in life—that of marriage. And since she is already on the scene, it is inevitable that you will meet the doctor before the curtain falls.

But, as I say, there are a number of other important citizens that you may never know at all, whose rôles in the drama of Ruckersville life were important. Among these was that of Austin Bourne, a young man with a coffee-mill voice who had studied law in vain. He could not practice it. He had been everything in vain, from a shoe drummer to an insurance agent. He could make a success of nothing. It was due to the fact that he had this gift of a voice, and believed himself too temperamental to endure the revolting details of earning a livelihood in a sordid world. His voice was he. He subjugated every feeling and every obligation to this fact. Therefore, while you may never meet him in these pages, you will bear in mind that there was never an evening when his squalling bass did not rattle the casements of some one of the Ruckersville mansions. And it would always be accompanied by the tremulous feminine reed treble of an organ, manipulated by either one maiden or another. The queer thing was that he had never married any one of his accompanists. But the explanation was really simple. He was already wedded to his voice. Besides, if he had married Leonora Bell, for example—not that Leonora would have had him—he would have been deprived of the pleasure of having Mildred Percey to accompany him on the organ in her parlor. A man with a voice is an innocent sort of instrumental polygamist. He cannot endure the same organist for a lifetime.

On Sunday afternoons in particular the town indulged in a kind of sacred concert. The words and tunes of many hymns ascended and descended in the great Sabbath calm, and often with a predominant treble poignancy that suggested that they were passing along with the camel and with many vocal squeezings through the very eye of the needle. But always, somewhere in the thin streaming sound, could be heard an awful bass.

On the Sabbath evening of which I am now about to write Jim Bone and Bimber were taking their way leisurely along Elbert Avenue. Through the open window of the Misses Yancey's parlor could be plainly seen the figures of the two sisters standing on either side of Leonora Bell, who was seated at the organ with her fingers spread out over the keys. They were singing Abide With Me; while from the parlor of Mildred Percey rolled a tremendous and familiar bass. The singer was struggling with Rocked in the Cradle of the Deep in a manner sufficiently realistic to produce seasickness. As the two pedestrians came opposite the gate of the Percey residence and the surging waves of the song rolled over them, the dog sat down, laid his tail out in the dust behind him, dropped his ears mournfully, lifted his nose, opened his mouth, and exhaled an antiphonal howl that was excruciating. Your grand opera tenor has not more temperament than a hound when it comes to singing; and Bimber was so worked upon by the combination of the organ and the voice within that nature compelled him to join in.

Nothing could have been more sympathetic than his intentions, but the effect was to silence the music as suddenly as if the singer had been dashed to death in the waves of his own melody. The dog at once resumed his walk, tail erect, ears cheerfully pointed. This was the view he presented to the two outraged faces that instantly appeared in Mildred Percey's parlor window. Bone himself was seen to stagger. To all appearances he was drunk. As a matter of fact, he was laughing. Whenever he was sufficiently inebriated by the application of his sense of humor to a situation, he weakened, lost physical control of his muscles and fell out of his chair, if he was sitting, or staggered, if he was walking.

This incident of the usual Sabbath recital in Ruckersville has no particular bearing upon our story. I merely set it down as an illustration of the innumerable details that may define the life of a community, but that are necessarily left out of fiction and history, thereby rendering both everlastingly less veracious than life.

As Jim proceeded along from the shadow of one great tree to another, which alternated with intense patches of sunlight upon the sidewalk, he saw Amy White advancing unconsciously to meet him. She wore an old rumpled and wrinkled muslin populated with faded pink roses. It was made with a "peroda" waist, and the full skirt rippled in the breeze about her tall, thin figure. She was bare-headed and she bent a trifle forward, tapping with a cane upon the walk, locating herself at every step with that singular, touching dexterity of the blind. He had passed the house a number of times within the last few months and always saw her seated at the window. But some masculine horror of invading the tragedy of such a presence had prevented his going in and making himself known to her, and thus renewing an old and intimate relation. For, when he was an urchin, years before, he had been in Amy's Sunday-school class.

It was as if he were unwilling to break the seal of an old affection, which had amounted at the time to one of those comradeships so frequent between a patient elderly woman and a very restless, outcast little boy. His parents had not been of the old Cavalier stock, and even in the Sunday-school class he had been a sort of Ishmael brand, snatched from the burning of his little sins. It was during this period that Amy's sight began to fail, a frightful miracle that the child watched with the ruthless curiosity of the young. It was his cruel custom to test her from time to time in those days by standing up before her in the doorway of her house—a vagrant, red-headed, thin-faced lad in baggy short breeches—and demanding:

"Can you see me yet, Miss Amy?"

Each time he was obliged to draw a trifle nearer, before the straining eyes could define him like a darker shadow amid the gathering of all shadows.

The day came when she could no longer see him even in the bright sunlight. He remembered the morning well. The peach blossoms were out in the orchard behind the house; the old lilac beside the chimney was covered with purple plumes. A hundred jonquils stood in rows along the path to her door. And a March wind was blowing out of a clear sky. She was seated upon the steps—changed, silent, with closed lids. The struggle was over; she had yielded to the darkness at last. He missed the strained, sweet look with which she had so many times greeted him, always ambitious to proclaim that she could yet make out the color of that flaming head.

He hastened to station himself before her in the glare of the sun. "Miss Amy, look and see if you can see me now!" he cried.

"No, Jimmy," she replied softly; "I don't really believe I've seen you for ever so long. What I see is not you, but merely a deeper darkness in that spot."

He recalled the propriety of his grief and wondered now at the delicacy of the boy he had been, who had laid the branch of fragrant lilacs in her lap as if there were nothing remarkable about going blind, thus artlessly concealing the shock and horror of his mind from her.

All these recollections passed with incredible swiftness through his thoughts as he now watched Amy advancing, unhurried, serene, tapping the pavement to right and left, unchanged by the years that had flown since their comradeship. Her face shone in the sun, supernal, ageless. He hesitated, was tempted to cross the street and avoid the meeting. When you are a certain kind of man you do not like to be translated and transfigured back into the little boy you have been by the greeting of one who has not seen you since. It makes a contrast, wrenches the moral coward in you, which is painful.

At this moment Amy paused, waved her cane vaguely as if in search of him.

"Who is it?" she demanded in that curious deep voice. "I don't believe I recognize you."

There was scarcely a man, woman or child in Ruckersville that she did not know always before they reached her. But at the distance of three yards she now recognized a stranger.

"Miss Amy ——"

"Jimmy! It's Jimmy Bone!" she exclaimed, with the quick transfiguration of her face from the masked silence of the blind into a smile that rendered it effulgent.

Jim made a stride that brought him within reach. She dropped her cane, lifted first one hand then the other, touched the stubble on his cheek, made sure of the cleft in his chin, with a widening smile of recognition as if she had located a familiar mark.

"Do you know, boy," she went on, measuring him with the quick, delicate precision of the blind, "I believe yours was the last face I ever really saw! Do you remember how your red hair was the last to fail me? I could see that long after your face had become just a blur!

"But it's your nose I remember best." She laughed, lifted an exploring finger once more and ran it along the Sierra ridges of this organ. "As a child, Jimmy, you were cursed with a nose of a cynical maturity that was out of all keeping with your tender years."

Thus it was that Amy came to the tear that lay upon his cheek.

"It's not your being blind, Miss Amy; it's your cheerfulness," he exclaimed hoarsely, brushing it away with the back of his hand.

She omitted the point. She was really incapable of grasping it. They walked along together, he holding her arm and guiding her.

"I am so glad to see you!" she went on.

"I believe you do!"

"Do what?"

"See me. It's the first time since I came back that I have felt that anybody actually saw me! I've a little chicken's roosting feelings, Miss Amy—as if it had just been one long, long day since I was here with you, and I'd spent the whole of it looking for doodles in the grass, and was now getting back, mighty cross and tired, to the coop at sundown. Haven't you got a few breadcrumbs for me in the old pan you used to keep on the water bucket shelf in the back porch?"

"I had to give up my chickens, Jimmy. It was a great cross at the time. But I got to where I could not find all the little ones in the evening, and I'd be awakened sometimes at night hearing one cheeping, cheeping somewhere out in the dark. And I'd hate to disturb Elbert. He works so hard every day, it seemed unreasonable to make him get up out of a sound sleep to put just a little chicken in the coop under its mother's wings. So I let the hen go."

They sat down in the entry of Amy's house and talked—that is, Jim talked. It was the first time that he had willingly given out in Ruckersville any of the details of his past. But now all at once it seemed that he had an overwhelming desire to get it properly expurgated and set forth to Amy's admiring ears. It was no more the truth than any other man's past is the truth when he tells it to a woman. She inspired him to lie about it beautifully, as she inspired Elbert to lie about his daily existence, and as every good woman inspires every bad man to fabricate his autobiography. As he went on with the tale of his adventures he began to see himself sweetly glorified in the placid, smiling attention of her sweet blind face. He wondered why in the world he had been so secretive about those years in the West.

Jim Bone perceived all at once that he was not the rowdy he had supposed himself to be, but something of a hero of the chapter-heading smiles upon Amy's lips. Given the tablet of such a countenance, and the worst man in existence can make shining scriptures of an ill-spent life. The truth is, we are all autobiographical liars. But the funny thing is that once we see ourselves clarified by such faith as Amy's, we accept her version, and experience a shriven peace that must distract the God who makes our moral sense, but does not control it afterward. On this occasion Bone finished his metamorphosis from the outlaw into the modest deprecating hero simply by a method of narrative that left out the undesirable portions of his real history. And it is one of the commonest miracles of conversion practiced by either men or women.

Two slim poplars that stood on either side of the front gate to Captain Martin's residence across the street cast long, steeple shadows upon the floor of the entry of Amy's house before Jim had finished his story. Then there was a little silence. Amy sat with her hands peacefully folded, showing like long-fingered lilies among the roses in her gown. Jim looked up like a man who is resting after a prodigious creation, and saw her face hooded in the evening shade, serene like a prayer that was answered years and years ago. For the first time he really thought of her. During the past hour she had simply been the environment in which he had found it possible and natural to recreate himself in the image of strength and nobility. Now he was inclined to part with a question the silence that hung like a curtain before that marvelous countenance.

"But what of you, Miss Amy? You haven't told me a thing about yourself."

"Oh, I've been singularly blessed, Jimmy," she said, covering him for a moment with the halo of her smile.

"You might not think it, me being blind. But I've missed all the sad sights in the world for more than twenty years. At first I was lonely. You know Elbert is a very busy man. His practice keeps him uptown all day. But I reckon I'm gladder to see him when he comes in the evening than most women are, who are busy all day and do not spend the whole of it waiting for their husbands. It seems to me that I don't really live till I hear Elbert's footsteps out there on the walk in the evening. Then all at once in the twinkling of a star, my heart begins to bubble, I am alive, I laugh and I talk. It's funny. You'd think that Elbert would do most of the talking, him being out in sight of so much doings in the town all day; but really I always have the most to say. You'd be astonished how much news of life you get just sitting blind and still for so many hours every day. Elbert says I am the greatest sensationalist in Ruckersville. I'm always telling him things I've thought out about this one or that one during the day—most of 'em good things, I hope, Jimmy," she interrupted herself to add. "It's wonderful how kind not seeing makes all your knowledge of men and women. And, of course, it's Elbert's way of complimenting me," she laughed. "He says it would make him terrible uneasy to have such a long-sighted woman for a wife if he didn't behave himself; he says he'd never dare come into my presence if he didn't do his best. He says he knows that the Lord sometimes holds His hands before His face when He's planning His new salvations for man, to keep me from taking advantage of it a thousand years too soon."

This Old Preacher Was Really the Most Potential Character in the Town

Jim was unable to join in her punctuations of laughter. He was thinking of Elbert, the vagabond and sot, and marveling at this sweet miracle of blindness, which was better than sight. He was suddenly overtaken by a stinging self-consciousness. It seemed that he, as well as Elbert, was a reincarnation achieved by Amy's faith, which bore no resemblance to the man he really was. It was depressing. The polluted past streamed in again upon his memories of himself. He arose, shook one trouser leg down and then the other, and said:

"Well, I must be going."

"Come again, Jimmy," she invited. "I want to know what you are doing in the town. Everybody is talking about you."

"They are?"

"Yes," she laughed; "I hear all sorts of rumors about the Bone building on the square; and Mildred tells me you are going to furnish tombstones for the soldiers' graves out of your new quarry. Yes, and that shows the people you mean well. They are very glad now that you have come back."

"Hope they'll stay glad!"

"Of course they will. And you must come back again and tell me things. I'd like to hear."

She paused, smiled a smile so luminous that it might have bridged any darkness, and went on:

"I'll tell you a secret, Jimmy, that I've told no one else. I am writing a little Book of Life. Elbert copies it out for me in the evenings. It is about people in Ruckersville. Nothing wise or great. I am just setting down the things they do—the commonplace deeds that never get into history or fiction. It's not to be published, of course—just a sort of human calendar of the days of our years here in the old town, which the children who come after us may discover some day in mine and Elbert's things, after we are dead and gone, and may find interesting and profitable. I've set it down already—all this life you've stirred up, and the talk about that strange Bone building on the square. It's getting to be like a real story, my little book, since you've come, a story with a mystery in it—a mystery upon which you have got us all working, without telling us what it is we are doing. You have no idea what a difference it's made, your coming and your stirring up things. Sitting here by my window, I've felt these last few months like a thermometer with mercury rising."

"You say Elbert copies it for you?" inquired Jim, who had listened with singular intentness to her artless confession. He had seen chapters of The Town Testament i

"Did You Ever Have Any Trouble With Your Spine, Mr. Bone?"

The Monthly Mercury, and had wondered, like every one else, what cross between saint and fiend was the author of these papers. He was still standing with his back to the street—poised in the mid-air of astonishment, so to speak, at the discovery he had made—when another shadow fell between those of the two poplars on the floor. The *shadow* moved, lengthened, tilted its hat, swished its skirts, and showed for an instant the neck and chin of a charming profile.

He turned and beheld Sylvia Story setting her foot upon the doorstep, looking more than ever like a Corinthian virgin in the calm of the Sabbath evening.

"Sylvia!" called Amy at once. "Come here, child, and let me see you!" By seeing she meant touching. "I always know you by the rustle of your skirts," she laughed, lifting her hand and passing it delicately along the girl's shoulders and neck as she bent and kissed her.

"Jimmy, you know Sylvia, don't you?" she went on.

It was a fact that they knew and did not know each other with an intimacy that enthralled imagination, but as the young man looked into the girl's face he understood that he should make a great mistake if he admitted this fact.

"No, never saw Miss Story before!" answered Jim, conjugating the lie glibly.

"I'll make you acquainted then," she said sedately. "This is Jimmy Bone, Sylvia. I used to know him when he was a boy. And this is Sylvia Story, Jimmy, the girl that's taken your place to me since you went away."

Jim flattened his hat against his side with one hand, set one leg forward, bent his knee and bowed awkwardly, but low enough to show the entire top of his red head. Sylvia merely inclined hers.

"Am I never to hear her voice?" thought Jim.

"Sit down, Sylvia!" Amy commanded. Then the young sphinx yielded the point.

"No, thank you. I am on my way to choir practice. I only stopped for a moment."

How terrible it is that no mortal grace has yet produced a language worthy of the tongue of a beautiful woman. If Sylvia had parted her lips and spoken in the Ossian strain of Torcah-tarno's daughter, Jim would have been startled only by the fitness of the speech. As it was, the commonplace familiarity of the sentiment she expressed took nothing away from the deep resonant tones coming out of her throat in a cadence that would have charmed any words into the semblance of poetry.

A moment later both had taken leave of Amy and were walking along the dusky street together.

It is not my purpose to follow them. The language of true love is monosyllabic and symbolic.

If a lover says to his beloved, "It is a beautiful night," he does not really refer to diurnal phenomena of darkness in which distant suns and moons and planets shine. These are minor constellations bedimmed when compared with her eyes. What he really means is that her presence makes the night beautiful.

She understands and says nothing. To reply "yes" would indicate egotism or dullness. Nothing from the standpoint of an ignoble eavesdropper can be more inane or absurd than a conversation between lovers. And no speech in this world is so pregnant with supernal meaning. This is why it is nearly always profanation to quote lovers, and explains why the conversation of Sylvia and Jim as they took their way down the avenue is not set down here. If it is as great a relief to the reader as it is to the author that they have at last met upon grounds sufficiently conventional to permit their courtship to proceed in a proper manner, this is gratification enough, without your knowing the only two sentences that passed between them during the walk from Amy's house to the church. A real lover does not beat much about the bush. He makes every word tell, till his arms render further conversation unnecessary. Mr. Bone, I say, addressed Sylvia only once during this walk. But this remark, whatever it was, printed the entire anthology of the rose family upon her face. She left him at the door of the church, turned her back upon him in the twilight outside, took her way down the aisle, perfectly indignant and perfectly happy.

XVI

BY THE first of October the walls of the Bone building were complete and the roof was on. It was built of stone and had the appearance of an ancient horned owl in front. This astonishing effect was secured by two stubby square towers that rose up on each side of the wide entrance dropping back the width of the towers and opening with arched double doors upon the mysterious interior. The back of the building bellied out like those Baptist churches where the baptismal pool is let in under the pulpit. It might easily have been taken for a church by the simple-minded people of the town, but for the fact that no house of God could have had that peculiarly sinister horned expression in front. Another queer feature was the half-moon stained-glass windows, put in a yard above the tallest man's head, and so turned upon their hinges as to afford light and ventilation within, but no possible chance of observation from the outside.

It Was No More the Truth Than Any Other Man's Past is the Truth When He Tells It to a Woman

"It's no church!" commented Elbert White late one afternoon as he stood between the Captain and Clark Story. The three had paused upon the sidewalk to study these same windows.

"It's got two steeples," said Story, by way of rebuttal.

"That's it," remarked the Captain. "A church ain't entitled to but one."

"And there's a carload of benches at the freight depot, shipped to Jim Bone; seen 'em myself today. And if they ain't church pews I don't know one when I see it."

"Still," persisted Elbert, leaning heavily upon his friends and squinting with a drunken wag of his upturned head at the windows, "no church rolls its eyeballs that high up under its eaves! That's one thing—hic—'at you can always say for a church. Its doctrines may be so devious that its goshpel tends more to salivate 'an it does to shave, but the theology of its windows is so near an' clear 'at a wayfarin' man, though a fool, can always look in and see ever'thing 'at's to be scheen!"

He drew one arm from around the captain's neck, worked his face into a drunken maggot smile, let out a puling laugh, pointed shakily at the high eyebrows of the Bone building, and concluded:

"It may be a mosque, or a harem, or'n ice cream parlor, but I'll be danged if it's a church!"

They moved on, Elbert dragging his feet, swaying tenderly this way and that between his friends. One of those circumstances had transpired that drew them closer together than usual in the recognition of a common fate. Mrs. Fanning-Rucker was giving a lawn festival that afternoon, for the United Daughters of the Confederacy fund, the fund to be used to pay the expenses of moving the ashes of the Confederate heroes from the old cemetery to the new one. And, though a festival was in the nature of a public entertainment, Mrs. Rucker always stood for exclusiveness, and would choose her guests even when they paid for their refreshments. And, in spite of the war record of the three old vagabonds, they were not invited. It was the way she had of expressing her contempt of the Captain's stinginess with his bee swarms in the spring, and her social aversion to vagabonds in the case of the other two. Vagabonds are, as individuals, usually far more interesting than a better respected person, but one does not recognize them socially. As a matter of fact, the three old cronies would not have come if she had asked them; but the fact that they had not had the coveted opportunity to refuse depressed them and afforded the much more to be desired excuse for consoling themselves in Bilfire's saloon. They drank, therefore, and then promenaded the almost deserted streets arm in arm, laying the palsied finger of their poor old muddled wits upon everything that attracted their attention.

These lawn festivals given by Mrs. Fanning-Rucker were as much in the year's calendar as Washington's Birthday and Decoration Day. One occurred in the spring, the other in early autumn. And they served a twofold purpose: the first, to replenish the treasury of the D. A. R., the other to replenish that of the U. D. C.; but chiefly these were the semi-annual occasions when Mrs. Rucker chose to separate the sheep from the goats in Ruckersville. And it was always a lawn festival, because she labored under some affectation of English customs, where the great people invite people to take refreshments in their parks and on their lawns whom they could not entertain at their infinitely more exclusive dinner tables. Mrs. Fanning-Rucker chose these guests almost entirely from the neighboring city of Atlanta. The society of Ruckersville never reached further than the shade cast by her front veranda upon the lawn. If you wish to know exactly what persons social megalomaniacs consider in their set, note those they invite to dine with them. These consist of other megalomaniacs like themselves, a few poor beswitched creatures who know how to barter compliments for social favors, and lions of one sort and another. Any stranger at such a table may easily recognize the three classes. If the young man seated next to you makes extravagant efforts to be agreeable, you may know that he is one of the poor creatures. The megalomaniacs are to be recognized by the fact that they do not exert themselves at all to be agreeable. They show their natural dispositions as plainly as the bristles on a dog's back. Usually there is not more than one lion at a properly arranged dinner party. This is upon the theory that two bodies cannot occupy the same space at the same time,

A Dollar Down and a Dollar a Minute

By Robert Sterling Yard

ILLUSTRATED BY GAYLE P. HOSKINS

Women are Not Successful in This Field So Far

A FRIEND of mine got home in September from a summer abroad and stopped a couple of days at the Waldorf, in the city of New York. At ten o'clock the next morning, while awaiting a business appointment made overnight by telephone, a card was brought to him which bore an unfamiliar name. A dapper young man of assured and not unpleasing address followed hard upon it.

"I want to close up with you," said this young man, "the matter of that set of Creation's Greatest Orators which you discussed with Mr. Darrow in Denver last May. It was just before you went abroad. You expressed admiration for the work—as well you might, being some spellbinder yourself—oh, I read the newspapers; I know all about you—but you did not sign the contract then—hurry to get away or something. I have a contract here—for the half-morocco edition. You just put your name there. No—that next line. Oh, it's all right. Not the most expensive, but really the most sensible working edition for a busy man like you. I understand, sir—of course you don't want any foolish frills. You're no art collector. You want standards. Seven a volume—just a modest price for a really fine work, finely bound. Good library edition—that's all.

"Eh? Only twenty volumes. Covers all the classics, you know, and right down to living times in America. Yes, the great Englishmen too—Pitt and all those, you know. Sure thing! Those impassioned Frenchmen too—eh? Eh? Well, you know their names better than I do. You're an orator yourself—eh? Ha! Ha! Why shouldn't you know them? Of course.

"No, no; I don't want any money. Just your signature—that's all I want. That's good enough for me. Good enough for anybody in these United States, I'm thinking. No—that line there. This is the inked pen. Right there——

"Thanks! Mr. Darrow will have them waiting for you on your library table when you get home. All right. Awfully glad to have met you. Just keep my card. You might want a Shakspere or a Scott sometime as you rush through—or maybe the Philosophies of All Times. Fine set, that. Good day!"

How the Agent Spotted His Victim

MY FRIEND told me that he really didn't know how it happened until it had happened. He had been much attracted by the books the spring before, but had decided that after all it was one of the things he could very comfortably do without. Though a public speaker of local note and something of a student he probably would not really read the books when he got them. He thought of the numerous purchases he had denied himself abroad, for it had been an expensive year. How had this thing happened anyway? He gave a short laugh; then he started suddenly after the clever salesman. Down Peacock Alley he dashed, nearly upsetting a large and indignant blonde; he swung round a corner, short-cut a luncheon room and caught his man at the side entrance.

"Eh? Oh, it's you!" laughed the salesman. "What's the matter? Do you—do you want the Philosophies? Fine set—fine set, I tell you; only nine a volume. I have here a ——"

"No, no," said my friend firmly—"not another book! I just want to know something."

"Why, certainly, sir. Anything at all. What can I do for you?"

"You can tell me this: I got in rather late yesterday. I came a steamer ahead of my schedule. I had never stopped at the Waldorf before and did not register till nine o'clock last night. I have never discussed these books except with a man in Denver whose name even I did not know. Now how? What? Why? How did you know? How did you recognize me? I'm curious. Tell me."

"Oh, it's all in the course of business," said the salesman, lovingly stroking his signed order. "Your name, with a lot of other passengers' names, came off the steamer by newspaper wireless a couple of days or so ago. Naturally the New York correspondents of the Denver papers pass your name on home. Naturally one of Darrow's clerks reads it in the home papers and reports it instanter to Darrow. Now I look after Darrow's New York business, so he naturally shoots on the facts to me in a night letter. I look up hotel arrivals after breakfast, spot your name, hike up here over my early cigar and naturally get your sig. That's all. Have a drink? Well, it is a little early—that's a fact. Good morning."

This lifts the curtain upon only one kind of subscription-book business. There are so many kinds that I'm not even going to catalogue them. Some of them are new and they are all, even the most ancient, highly modernized. There is nothing more modern in all its moods and tenses than the subscription-book business. Yet, after all, it is essentially the same old business. In every mood and tense the root form sticks out big for all observers. If I could only say that P. T. Barnum invented the subscription-book business it would enormously simplify this getting at the essence of a complicated subject; but he didn't. It began many generations before Barnum. Its origin lies back in the morning mists of publishing. Some day patient investigation will discover the man who first invented selling books by personal solicitation and devised the books to entangle his fellow townsman, together with the patter to do it with; and it's tomes to tracts his name was Barnum.

It must have been down that ancestral line we got P. T.

The old old-fashioned kind of subscription-book business still flourishes here and there in the far country—the kind you knew when you were on the farm; the kind your grandfather told you about; the kind Eugene Field wrote his wonderful story about. The other day I ran across a printed paper entitled Instructions for Agents, issued by a big firm still doing this old-fashioned sort of thing—one of those, you know, which advertises that you can make from twenty to eighty dollars a week if you'll only send in your name. The instructions were for neophytes and the detail was terrifying. There were instructions for approaching the house, for the conversation at the door, for entering the house, for every possible exigency in the house and for getting out of the house gracefully and in good order.

Would-be salesmen were especially impressed with the necessity of finding out facts in advance about the people to be called upon. "Inquiries should be made delicately from house to house," and facts thus acquired should be confirmed before they were used.

"Never ask, 'Is Mrs. Blank in?'" says Rule Six. "Take it for granted that she is in and that she will see you. Simply state: 'Please tell Mrs. Blank that Mr. Dash wishes to see her.' Invariably give your name instantly and do not wait to be asked for it by the servant. This is very important."

"After having addressed the servant," says Rule Eight, "slip into the house. Don't show undue haste or force your way in, or stand like a piece of wood waiting to be asked to enter or as if you expected to be left standing outside. Walk deliberately into the house as any gentleman would who had been in the habit of paying visits. Some canvassers act very foolishly in this respect and are very awkward."

"Once inside," says Rule Ten, "you must not stand in the hall like a blockhead; neither dare you open the parlor door yourself and walk in, but hang up your hat on the hatrack immediately after you enter and the servant will always take the hint and ask you to take a seat in the parlor. She will treat you exactly as she finds you expect to be treated."

And so on. The agent is instructed to begin safely on the weather, but not to linger too long in generalities—rather to get down to business by a conversational path carefully chosen according to the disposition of the hostess; and, once begun, carefully to avoid direct issues, which may result in premature refusals, but swiftly and skillfully to steer round rocks until attention and interest is fairly won for the book offered. Then strike quickly and surely and hold tight.

New Methods to Meet New Conditions

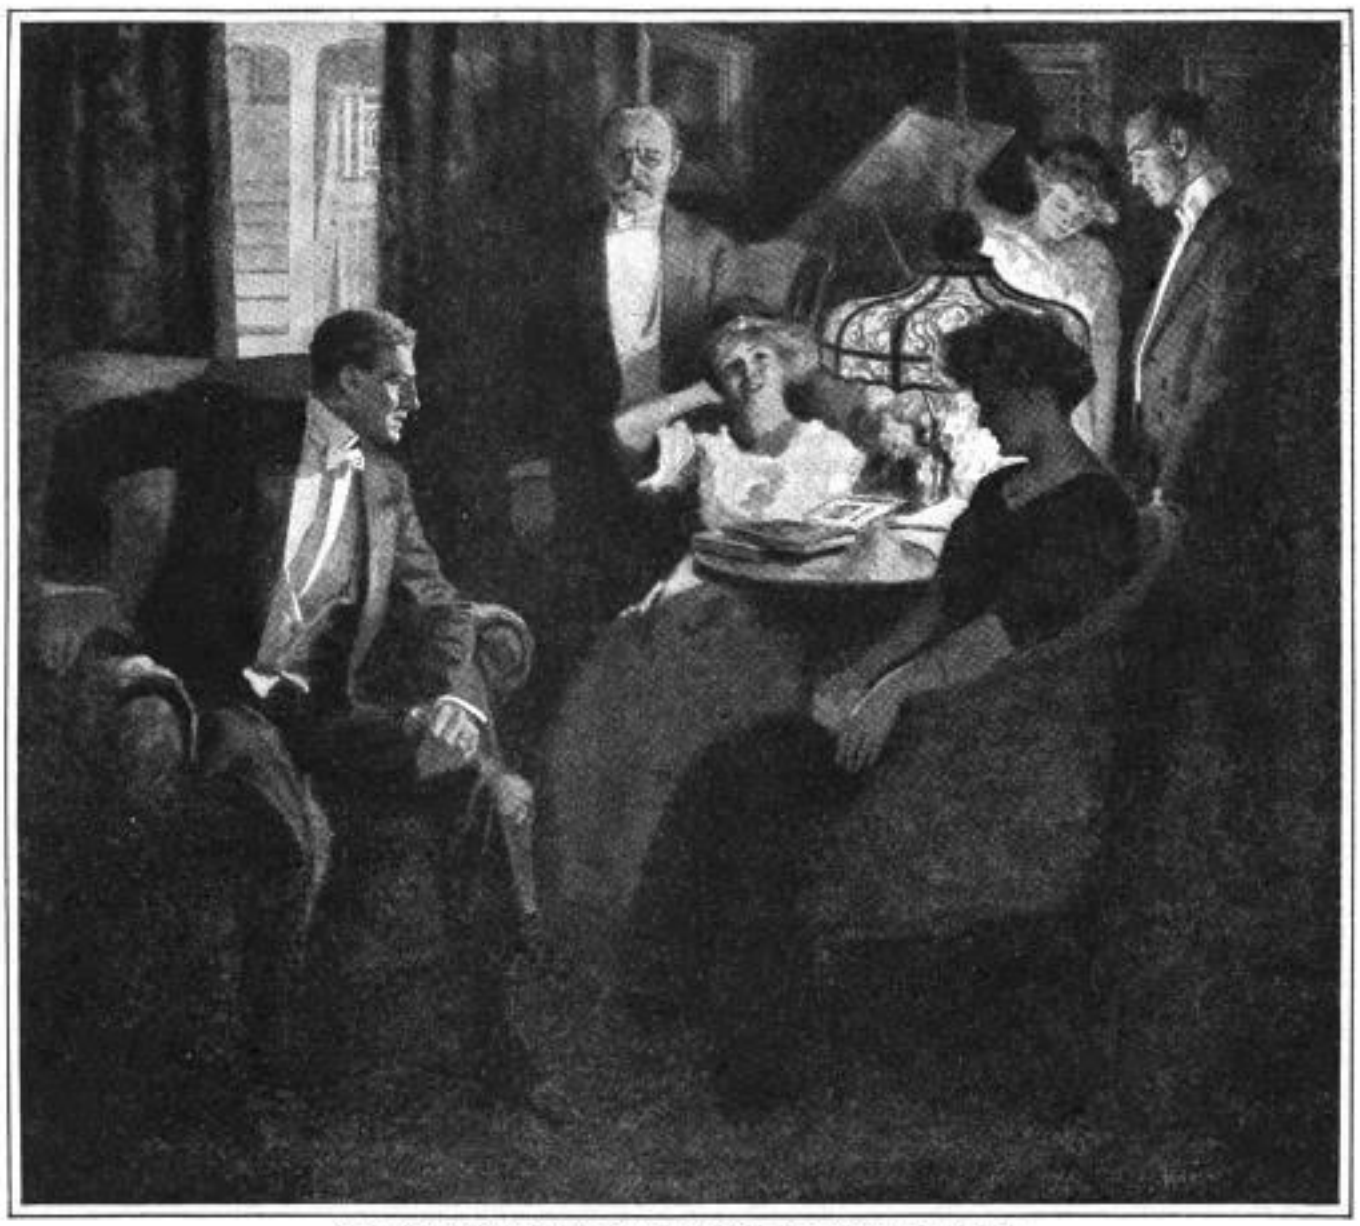
IT IS true that in these piping times, when the farmer runs his car and his daughters are up on the best sellers; when Ibsen is discussed at the crossroads; when one woman's magazine alone, without counting a dozen of large circulation and a score of others, sells a million and a half copies a month; when a school expansion of unbelievable rapidity drags far behind the demand; when boiler-plate frontier newspapers carry weekly book departments—in these amazing days the familiar crudities of the old subscription business are to be witnessed only in the back waters of the swift current of universal cultivation.

However, other times, other fashions and—to refer to Barnum again—"the people" of all times, even the most intelligent, apparently "love to be fooled." Today has its corresponding subscription methods. We are all familiar with the "secret" histories of courts, the advertising of which suggests to the naughty mind all kinds of mysterious things that it doesn't actually promise, which of course the sober, substantial books, when they arrive, are found not to contain; but people ought not to have naughty minds. And we know well the wonderful offers of solid sets which, "because of recent consolidations of large interests, we have been able to acquire at a mere fraction of their cost, and will sell, beginning at nine o'clock tomorrow morning," at prices that undoubtedly will never be offered again.

Though it has brought forth many new-style subscription eccentricities this splendid age has also—and naturally—developed

"Yes, Sir; It's Getting to be a Harder Game Every Year"

Digitized by Google



several subscription forms that rank high in publishing and business estimation. It is the easiest thing in the world to belittle these or even overlook them altogether, *for* naturally it is the sham in every business that attracts the public attention; but, amusing and fantastic as many of these forms are, it would be as unfair to allow them to color your conception of the subscription-book business as a whole as it would be to pronounce the entire clothing business, for example, a sham because of the picturesque antics of the "puller-in" of Baxter Street.

To these forms must be given the fullest consideration, for they constitute the subscription-book business of today.

The greatest discovery of the last two decades is the fact that the public is honest. Considering that our jury system, based upon the discovery that the public is unbribable, is centuries old, it seems strange that knowledge of the public's honesty is so recent. I suggest the fact for the consideration of the philosophers. I'd like to hear their reasoning.

Upon that discovery is based the modernized subscription-book business. In the old days the agent would leave you a volume at a time and collect the money for each delivery. Today the agent collects an original payment often as low as a dollar and delivers the entire set of books at once, the publisher depending upon the customer to pay the balance direct to him in weekly or monthly installments.

The modern discovery is that the customer pays it. Of course there are individuals who don't—some who cannot when the time comes; and now and then, very rarely, some who won't. The proportion of these, however, is found in practice to be so small that the losses are less by far than were the combined expenses and losses of collections through agents under the old system. There results a stabler and in every way a simpler basis of business. Nowadays your publisher, dealing directly with his public, allows for a small, calculable and dependable percentage of loss. The confidence and variety of today's business are two natural resultants. Another is today's enormous distribution of good literature in cheap form at a much lower margin of profit—a fact of incalculable importance in casting up the causes of the American's amazing average of cultivation.

He is Not Uncouth, or Ill-mannered, or Overtalkative, or Insolent

One of these several newer subscription forms—one dealing mostly with modern copyrighted sets—deserves for several reasons first consideration. Because it is especially sound and reasonable in its business foundation; because it is just and honorable to scrupulousness in its methods; because it deals in highgrade books, honestly priced and made to stand years of reasonable service—in a word, because it corresponds in ideals with the highest type of trade publishing, from which it differs chiefly in the method of reaching the consumer, it must be considered the ranking subscription business of the day. Let us grant it is the offspring of an ancient and not too scrupulous parentage, if you will; let us grant that some of its brothers and its sisters and its cousins and its aunts are today not its social equals; let us grant that in bulk it is, in the bosom of its family, as a single sheep in the flock—it is, nevertheless, what reputable publishers mean when they speak of the subscription-book business.

And yet, in justice, we must not give the present generation all the credit for this splendid business form. Far back through past generations are seen its forerunners, showing unmistakably that, perhaps even from the beginning, down the genealogical line runs a strain of fine dealing side by side with that fantastic strain which is responsible for so much that is eccentric and even farcical, which is smart at times to the brink of trickery in that part of the business of the present, as well as of the past, which has naturally most attracted the public gaze. To show this it is needless, in this article, to go back of the recollections of many now living. Still it was a good many years ago that Stanley's In Darkest Africa was sold by subscription in strict accord with the highest ideals of publishing. Later on Blaine's Twenty Years in Congress and Grant's Memoirs stand out among the fine successes of the most honorable of subscription methods.

And these titles, too, will serve the purpose of illustrating the principle of subscription selling that is differentiated from other book-selling methods and affords a firm foundation for a highly organized, highly individualized business. It is well known that all of the books I have mentioned were extremely successful. In Darkest Africa made its author independent for life. Twenty Years in Congress added nobly to the resources of the Blaine family. Grant's Memoirs yielded what was once called a fortune.

Yet I am sure that none of these handled otherwise would have been anything more than profitable sellers.

The fact involved is human negligence. Few of us, even in the most trifling affairs, will step outside the set paths of our lives without compulsion. You know yourself you never would have bought that umbrella, even under your wife's constant remindings, unless compelled by a midday shower. And you know also—everybody knows—that bossism in this land could be crushed out at one overwhelming blow if the men who are opposed to boss rule would take the trouble to walk round the corner and register—or, having registered, to walk round the corner and vote. A study of the figures of any ordinary election in the last half-decade will prove that. Now this could all be cured and the political front of the nation changed in a day if a system of calling at the voter's residence for his vote, instead of requiring him to call at the polling booth to present his vote, should be adopted. I think every observing citizen will agree with me in that. I suggested the scheme once to a "spoils" leader whom I knew well at the time, and he shivered. Then he grinned and said: "My boy, thank Heaven it's impossible!"

Though impossible in politics, it is precisely what the subscription-book publisher puts into profitable practice. He knows that of, say, twenty people who are probable purchasers of a given work, only one will take the trouble to go to the bookstore to buy; but half a dozen, say, will buy if the bookstore comes to them. There is only required, then, a practicable plan under which it will be profitable to send the bookstore on a house-to-house tour. That is the subscription-book business.

The financial plan is simple. There is only one price—the retail price—from which no discounts are made. The publisher divides his receipts among these items:

	PER CENT
Manufacturing	20
Selling commission	25
Author's royalty	10
Cost of doing business, including depreciation, collections and losses	30
Profit	15
Total	100

Of course there are variations from this. Sometimes, especially with large press runs, the manufacturing cost is lower, and with everything else constant the profit is better. Sometimes the author has to have a little more royalty, and sometimes depreciations, collections and losses add several points to the cost of doing business. The average, however, at least for standard houses, stays pretty close to the figures quoted.

As in every other business, of course, a certain bulk is necessary for this condition to be realized. Many book sets require several years of activity to offset the heavy original investment and get on their financial legs, so to speak; and during this period the average of business is kept up by sets formerly published—the backlog, as publishers sometimes call it. Many ambitious book agents, who lose their all or their friends' all in some independent publishing ventures of their own, fail because they overlook this great fact of bulk. A well-established, well-bulked subscription business of the first class of quality is, under wise management, one of the safest and most satisfactory—though not one of the most profitable — businesses in existence; but, like every other fine, sound business, it becomes fine and sound only by growing. It is no mushroom.

Many who are knowing in subscription books of other kinds will question the item of twenty-five per cent commission to agents; they will quote commissions of forty per cent or more—but not in this class of business. As we shall see presently, a bigger commission to general agents goes only with cheaper production and higher prices. This ideal trade, which unites the best possible quality of material with prices low enough to represent value, cannot afford the luxury of general agents.

How—you with the old-fashioned general-agent idea in your head may ask—How does this newfangled subscription publisher reach his market, covering, as it does, the whole United States? So great a territory cannot adequately be reached from one center.

This brings us to quite a new personage in subscription-book selling—one who lived a generation ago only in isolated, distinguished examples, but without whom many thousands of regular and considerable book-buyers of today would not be book-buyers at all.

Let me present to you the new-style book agent!

I note your surprise.

No; he is not uncouth, or ill-mannered, or overtalkative, or insolent; nor does he back you into a corner and force you to buy a book you don't want as the only means short of calling the police—which is always unpleasant—for getting him out of your house. On the contrary, he is a courteous, well-groomed, energetic business man, who has

PHILADELPHIA, MARCH 23, 1912

The Third-Term Bogy

SENATOR REED wants to amend Article II of the Constitution so that no person who has served two terms as president of the United States, or one term and part of another, shall ever again be eligible to the presidency; but if Article II is to be amended at all—and no doubt it isn't—it should be made to read simply as follows: "No person shall be eligible to the office of president unless he has been elected thereto." That is the only restriction which has any reasonable place in the Constitution.

Referring to the crisis of the Civil War and the nation's emergence therefrom, Ambassador Bryce observed that such a people can make any constitution work. He might have added that if a people cannot make any constitution work no constitution will do them any good. If the people of this country ever reach a state where they will accept government on the Diaz pattern no constitutional restrictions will help them. One can imagine some prolonged national crisis—such, for example, as arose for the states of Europe in the Napoleonic era—when the people of this country would wish another Lincoln to serve three consecutive terms. There should be no bar to their having him. In view of the activities now centering upon a distinguished resident of Oyster Bay, one can readily imagine a situation in which the people would wish some man to serve a third non-consecutive term. There should be no bar, either of law or tradition, to their having him. We think very few people indeed are imposed upon by the third-term bogy as applied to a candidate who has been out of office four years. If that is all there is to be said against The Colonel as a candidate we might as well stop abusing him.

A Motion-Picture Amendment

CONGRESS has not a high opinion of literature, music and the plastic arts. If Michelangelo had produced his statue of Moses under the protection of our copyright law, and somebody had stolen and sold a copy of it, he would have found that the law estimated his damages at ten dollars. Our law would suggest the same sum to Leonardo as damages for a larcenous copy of his Mona Lisa—thus probably reconciling him, if he were still living, to the outright theft of that masterpiece from the Louvre last year. The commercial value of the Sermon on the Mount, under the copyright law, would be fifty dollars.

Congressman Townsend, of New Jersey, proposes a further cheapening of literature. A bill introduced by him provides that, in case of the infringement of a copyrighted work by a moving-picture show, "where the defendant proves that he was not aware that he was infringing a copyrighted work and could not reasonably have foreseen that he was so infringing, the entire recovery by the copyright proprietor shall not exceed one hundred dollars," until after a notice has been served upon the moving-picture man that he is infringing a copyright.

The argument is that some dishonest person may, at any time, build a moving-picture play upon a copyrighted story and sell it to an innocent producer who is not aware of the infringement. Under this bill, the moving-picture man would be practically absolved from any obligation to find out whether a copyright was infringed. He could buy anything offered him and be sure that, no matter what copyright he infringed or how seriously his infringement might damage the real author, his liability would be limited to one hundred dollars.

In contrast with the tariff, we are decidedly in favor of revising the copyright law upward—not downward.

Another Wisconsin Example

FIFTEEN years ago, we learn from The Survey, a Chicago woman whose husband earned sixty dollars a month borrowed twenty-five dollars to buy her son a suit of clothes. She didn't wish her husband to know of it, and told the loan shark so. Playing upon her dread of exposure, the shark employed the well-known arts of his trade to nurse the loan along, adding another layer of usury whenever the woman and her son seemed on the point of extinguishing it. At the shark's death, not long ago, he had collected five hundred dollars from his victims—and the loan was still alive.

That is a very common case. It presents a subject with which Congress, for the District of Columbia, and the legislatures of many states have wrestled of late. Just such merciless robbery of the poor by money lenders has existed everywhere. What ought to be done about it?

Various answers have come from different quarters; but a completely novel answer comes from Wisconsin—where politically they do many strange things, such as taxing railroad property as heavily as farm property and attempting, by an income tax, to make all citizens contribute to the support of the state according to their means.

Wisconsin has a usury law with teeth in it. Under that law a Milwaukee loan shark, reputed to be a millionaire, was recently sentenced to ninety days in jail—the first time, we believe, that a prison sentence was ever given for usury in the United States.

This is radical, because robbing the poor by unconscionable usury is a genteel sort of crime. It is committed necessarily by persons possessed of capital, who usually wear good clothes and live in comfortable houses. It bears a resemblance to the honorable trade of banking. The law has invariably treated it as a genteel crime, punishing it only with a money amercement by way of loss of interest or a fine—which, of course, the loan shark promptly charged up to his next victim.

The Wisconsin law, however, recognizes the thing for what it is—namely, robbery of the meanest kind. We heartily recommend this Wisconsin example to every legislature that is dealing with the loan-shark problem.

Loan-Shark Legislation

HAVING fixed a reasonable rate for small, personal-security loans, the exaction of a higher rate ought to be regarded and punished as larceny. No doubt this flies in the face of the common-law theory that every sane adult is capable of looking out for himself; but, since most social progress involves flying in the face of common-law theories, we should not bother about that. Abundant experience shows that poor borrowers are not capable of looking out for themselves; and there is no better excuse for leaving them exposed to unconscionable usurers than to green-goods men.

The first thing, however, is to fix a reasonable rate. Without that there will be no real advance in curbing loan sharks. By a vote of one hundred and seventy-five to eighty-three the House of Representatives not long ago refused to sanction a higher rate than one per cent a month in the District of Columbia, though persons who had disinterestedly given most time and thought to remedying the loan-shark evil in the District urged that the rate be two per cent a month, because experience elsewhere had shown the business could not be conducted profitably at one per cent. The argument in favor of the one-per-cent amendment was that nobody could really afford to pay more—and Congress ought not to sanction what poor borrowers could not afford to pay.

Ignoring experience and going upon fine sentiments will never cure the loan-shark evil or any other. That is exactly what makes futile so many of our well-meant reform movements.

Leadership and Stock-Watering

THE investment of capital in the United States continues upon the large scale that characterized last year; but financial people complain that the money, as in 1911, mostly goes into old, well-established concerns—and then largely into their bonds rather than into stocks. There is little new enterprise, little reaching toward the future; and the reason—we are told over and over—is that the leaders are discouraged by the attitude of the state and Federal Governments. There is a growing tendency, seen in the Interstate Commerce Commission and in the public-utilities commissions of various states, to limit the returns upon capital—seen also in current talk of controlling prices of commodities made by big industrial concerns. Though the people who furnish most of the actual capital for big enterprises are content with a limited return, as their large purchases of bonds show, the leaders will not stand for it.

We are often assured that we cannot have leaders without watered stock. Bold and resourceful men who project important new enterprises must be tempted by a chance of extraordinary profits. Would Hill have built the Great Northern for six per cent upon the money he put into it? Would Carnegie have developed the Pittsburgh steel mills for seven cents profit on each dollar he invested? It takes a hundred or a thousand per cent to set such men in operation.

This argument is very familiar, and it might be convincing if we did not know that real leaders often get no per cent at all. For leadership in acquiring large wealth Mr. Carnegie himself laid down the sound rule that "pioneering doesn't pay." New enterprises make themselves when they are needed. The circumstance that there is little doing in the watered-stock line means simply that at the moment the country's chief need is to develop and adjust established concerns.

Automobiles and Road Taxes

IN NEARLY every state, of late years, the simple old system of maintaining highways exclusively by local taxation has been abandoned. Undoubtedly the automobile has had a much larger part than any other agency in forcing this change. When scarcely any vehicle on the public road could travel farther than twenty miles a day, and hardly any vehicle did travel farther than ten miles, highways might be maintained by local funds, because practically every vehicle upon a given piece of road was owned in the neighborhood. The motor car, with its easy reach of a hundred miles a day, changed that, and nearly every state now aids in the building and maintenance of public highways.

However, this doesn't cover the ground. A count made by the state engineer of New Hampshire last summer indicates that fully half the cars on the best public roads were from outside the state—touring through on a free ten-day permit. Conditions in New Hampshire, no doubt, are exceptional—but the same condition to some degree is found nearly everywhere; and as the use of motor cars steadily increases it will become a more and more important factor in regard to highway maintenance. Automobiles are hard upon many roads that were built only for wagon traffic. On the other hand, a road properly built to withstand automobile traffic is very durable, but the first cost of construction is relatively high. Local rural communities should not be expected to build and maintain highways for through motor-car traffic—that is recognized nearly everywhere, and the state aids them; but should the state alone be expected to build and maintain highways for a constantly growing interstate traffic?

In spite of President Taft's constitutional objections, we expect that the automobile, by throwing an ever-growing interstate traffic upon the highways, will presently get the Federal Government more actively into the good-road movement. And farmers will receive incalculably greater benefit from such participation by the Government than automobile owners do—because farmers, after all, are the great road-users.

Better Than Damage Suits

THE beer industry in this country is largely conducted by the Brewers' Association and the International Union of Brewery Workmen. As the names imply, the first is a comprehensive organization of brewers and the second an about equally comprehensive organization of brewery employees. For nearly two years a committee representing these two big organizations has been at work upon a plan for accident compensation and old-age pensions. It proposes, in brief, that every employer shall contribute one and a half per cent of the amount of his payroll to an indemnity fund, while each employee contributes half of one per cent of his wages. Out of this fund every employee who is temporarily disabled by an accident shall receive sixty-five per cent of his regular wages during the disability; if totally disabled he shall receive sixty-five per cent of his wages for five years; if killed his widow or dependents shall receive, roughly, four years' wages. The compensation is to be paid, in every case, regardless of negligence, assumed risk, fellow-servant doctrine or any other common-law defense. A workman of twenty-five years' standing who has reached the age of sixty-five receives, during the remainder of his life, a weekly pension equal to one-half of his average wages. Three men chosen by the employers and three chosen by the employees constitute a board to administer the fund.

This certainly looks far better than the barbarous, uncertain, costly, contingent-fee, damage-suit method of settling compensation for accidents—under which lawyers, court costs and accident insurance companies absorb most of the money. The prime factor in bringing this about, no doubt, was that both sides were well organized

WHO'S WHO—AND WHY

Serious and Frivolous Facts About the Great and the Near Great

The Foe of the M. D.

SHOULD you observe the Money Devil clattering down the street, yowling mournfully and chased by a young man of high and noble mien, of a pale and poetic cast of countenance and of an air of intense devotion to the duty at hand, that young man would be Bob Henry—Robert Lee Henry, erstwhile of Texarkana, Texas, but now of Waco, which is but another of the sparkling gems that glitter in the imperial diadem of the geo-lorious Lone Star State, as Robert himself would say.

Every morning Robert goes round to the noisome but popular lair of the Money Devil and routs that opprorious ogre out of its opulent nest by sticking a few denuniatory shafts into its gilded hide. A timid creature despite its awesome appearance, the Money Devil snorts with pain and dashes madly through the busy marts of trade, with Bob Henry only one jump behind and prodding at every leap. Presently the Money Devil galumphs back to its hiding-place and crouches, trembling, until the coming morn, when Bob Henry appears again, and again jabs it into its daily frenzy.

You know the habitat of the Money Devil, of course—Wall Street on this side and Lombard Street on the other. But Bob devotes his attention to our own specimen, only occasionally hurling a few javelins at the Lombard Street one to show he's no piker and is on the trail of all and sundry Money Devils there are. As he classes them, our particular Money Devil is known as the Money Trust. It all amounts to the same thing; for, as is well known, all trusts are devilish, especially to those who are not in on them. Hence Robert desires to investigate the devilishness of the Money Trust; and in that enterprise he has the backing of Mr. William J. Bryan, adviser in ordinary to the Democratic House of Representatives.

However, it is not with politics or investigations I am concerned at the moment, but with Robert Lee Henry—than whom, I may say, no more consistent forayer against the abuses of wealth by the wealthy, whether individual or corporate, has forayed in Washington for quite a spell. Robert has viewed with alarm the growing tendency of our multimillionaires toward crass and arrogant and un-American display, and has called the multis down pretty sharply on occasion. It did not begin with his castigation of the Money Trust. Long before he reached that phase of the matter he had spoken in no uncertain terms of various other demonstrations of his vulgar and vicious practice on the part of those who have the price.

I quote: "Can any patriotic American who contemplates the rising tide of lavish and almost obscene extravagance, with its source springing from the coffers of the overrich, fail in the perception that it is rapidly undermining the foundations of every cottage in the Republic? As surely as death, with its impartial footsteps, approaches the doors of palatial abodes and cottages of the poor, so will the corruption of lavish display drag its withering trail over every home in the land. . . . History does not record anything surpassing the sudden and intensely bacchanalian revel of extravagance and show into which our simple and serious people have been swept by the abnormal growth of tremendous fortunes and estates, to the detriment of our purest and best ideals." And so forth.

The Money Devil Hunting Cover

WHAT Robert was getting at when he uttered these ringing words was *(a)* the glitter of American diplomacy and *(b)* the curse of international marriages. He certainly was unsparing when he handed it to the rich Americans who go abroad as ambassadors for this country, and he had nothing but contempt for the daughters of our rich families who contract international marriages; in fact, Robert was very severe. And many an American ear, attached to an internationally married duchess, formerly of Pittsburgh or New York, must have burned at the time he was speaking; while, if the ambassadors, "installed," as he said, "in viceregal magnificence," didn't move about uneasily in their gorgeous chairs, they must be hardened indeed!

Proceeding by easy stages, Mr. Henry worked up to the assault on the Money Devil; and the way he lambasted that facinorous octopus, in resolution and speech, certainly was a caution. He demanded that it shall be shown up—and shown up forthwith! He demanded that the Congress shall investigate it and see how it is that a combination of a few men controls the finances of this country. Day in and day out he camped on the trail of the Money Devil, and bedeviled that devil until the name of Robert Lee Henry became a byword and a hissing at the corner of Broad and Wall, and thereabout. "Help!" screamed the Money Devil—"Help! Help! Call off this man Henry, or he may find out something about me that I do not want found out!"

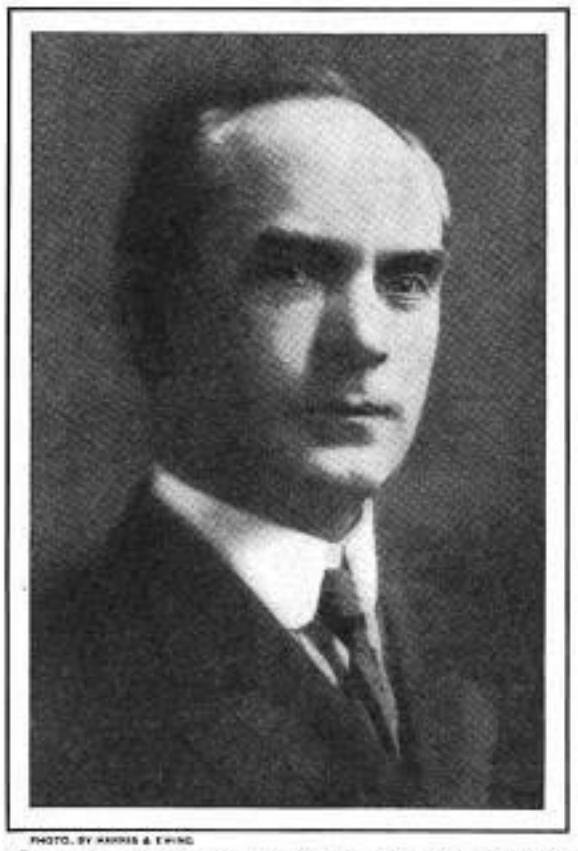

PHOTO. BY HARRIS & EWING

Looking for Czars, You Would Never Pick Out Henry

As has always been the case, when a Money Devil yells for help there are helpers to be found. It was so in this instance. Before long numerous trusty and trusted trust defenders had rallied, and the Money Devil was eased off into a less parlous situation amid loud cheers at the corner of Broad and Wall, and thereabout, and to the accompaniment of much oratory in the Democratic caucus. Still, Robert Lee Henry is not eased off—not yet. He is still stalking that M. D., and swears he will continue on the trail. However that may be, he started something, did Robert—and it will be some time before it stops.

He is a busy citizen. When they organized the House the Democrats made him chairman of the Committee on Rules, which position, by right of designation and denunciation by the Republican minority, makes him a sort of a czar. To be sure, to hear the Republicans tell it, the House of Representatives is all cluttered up with Democratic czars. The Republicans can spot a Democratic czar every time a Democrat moves the regular order. Henry qualifies oftener than almost anybody else except Oscar Underwood, because he, as chairman of the Committee on Rules, hands in the rules that stifle the minority, perpetrate obnoxious outrages on free speech, tie the helpless Republicans to the wheels of the Democratic chariot, gag them in what is reputed to be a forum of free discussion, and other unpleasant things—to hear the Republicans tell it.

Henry commits these heinous crimes with an air that is bland and pleasant and with a smile that is benign. If you were looking for czars you would never pick out Henry. Indeed, you would think him a genial and kindly man until you had been informed of his terrible moral obliquity—by the Republicans. The fact is, Robert Lee Henry is a czar only in the course of duty. At all other times he is a good deal of a poet, a lover of Nature, and has a real Texas slant to his rhapsodies over the same.

It is quite true that Henry does not habitually speak in blank verse, as does that other eminent Texan, Morris Sheppard; but when he lets himself out he gives Sheppard a hard run for his poesy. One of Henry's desires is to change the date of Inauguration Day from March fourth to a later time, when there shall be a chance that it will not snow on the parade. In the course of some remarks urging that project he said:

"Let it be when the earth's icy mantle has been wooed by golden sunshine into a carpet of verdure rivaling the kaleidoscopic grandeur of Old Ocean's emerald; when myriad millions of scurrying snowflakes round yonder dome have been transmuted into seas of April blossoms everywhere, 'neath Nature's elements in peaceful accord. Here in this capital, robed in the splendor of springtide and with a beauty unrivaled in all the world—when God has summoned His favorite season to smile and speak welcome—we will induct into his exalted station the loftiest official in the greatest republic within the tide of time!"

Otherwise, Mr. Henry is a native Texan, was at one time mayor of Texarkana, and once first assistant attorney-general of Texas. He has been in Congress for fifteen or sixteen years and he is one of the big men on the Democratic side. They like him in Texas and they like him in Washington; and when a statesman can get past in both of these places he is a man of parts.

A Concession to Cummins

ON THE day, some years ago, when Senator A. B. Cummins, of Iowa, first took his seat in the Senate, he was sworn in and introduced to some of the senators, and given a desk. Nobody paid any particular attention to him, and Cummins felt lonesome and out of place and generally scared and bashful. He looked round at his fellow senators in the hope of getting a few smiles of welcome, but they were too busy or too indifferent to "glad-hand" him.

For want of something better to do Cummins took up the calendar of Senate business that lay on his desk. When he came to "Unfinished Business" he found, to his consternation, that the Postal Savings Bank Bill was the unfinished business.

Just at that moment Senator Crane, of Massachusetts, came over and sat down beside Cummins and welcomed him to the Senate. Crane was very cordial and pleasant, and Cummins explained his predicament.

"I find here," said Cummins, "that the Postal Savings Bank Bill is the unfinished business. Now I am somewhat familiar with that bill, and there are many things in it to which I am opposed. I cannot let it go to a vote this afternoon without my protest, and I am just new here and do not want to rise and say anything on my first day. At the same time, if that bill goes to a vote my conscience will not allow me to sit here silent without voicing my protest. You understand my position, Senator Crane. Can't you help me? Can't you have action on that bill deferred for a few days until I get somewhat over my newness and find my bearings?"

"It will be very difficult," replied Crane, "but perhaps I can help you. At any rate I shall try out of my high regard for you."

Half an hour later Crane came back smiling. "I have fixed it," he whispered. "The bill will not be brought up today. I explained the situation to Senator Aldrich and some of the other leaders and, as they have a kindly feeling for you and desire to work in harmony with you, action on the bill has been postponed as a great favor to you."

Cummins thanked Crane effusively. The bill was not brought up that day, nor the next, nor the next. He marveled at Crane's influence in the Senate. At the end of a fortnight he made some inquiries. He found the Postal Savings Bank Bill was the permanent unfinished business, that it had been placed on the calendar as a buffer to hold back other measures, and he was present two years later when it was voted on.

Mose's Million

E. F. SWINNEY, president of the First National Bank of Kansas City, was born in the South. He goes back home once or twice a year, and it is part of the home-coming program to have Old Mose polish his shoes. Old Mose prides himself on the fact that he has known "Misteh Eddie" since he was born—and "his daddy befo' him."

When Mr. Swinney was there recently Mose was polishing his shoes. He stopped and asked:

"Misteh Eddie, how much is a million dollahs?"

"Well, Mose," Mr. Swinney replied, "you have seen ten silver dollars—haven't you? Now imagine ten of those stacks and you have a hundred dollars. Then ten times that and you have one thousand dollars. Then ten times that and you have ten thousand dollars—and one hundred times that and you have a million."

"Misteh Eddie," continued Mose, exceedingly troubled, "would all them silveh dollahs go on that table yondah?"

"No, Mose—not if they were piled to the ceiling. What would you do if you had a million silver dollars, Mose?"

Mose stopped shining. He pondered for a minute. Then he said:

"Well, Misteh Eddie, I reckon I'd have mah cistehn cleaned out."

Old Reliable Makes a Mistake, Turns a Trick and Hires a Servant

II

"Come 'Long, Nigger," He Ordered; and Puffing Like a Switch-Engine Old Reliable Entered the Hotel

ALOW, gray sea-wall defends the level sands at Alexandria. Against it throbs the ebb and flow of tepid waters. Behind that wall there runs a road, a faithful, slavish road conforming to every whim and curve and angle—a glaring, sandy road—a staring, vacant road. Beyond is a row of cafés fronting the wall and facing the sea, empty as tombs—which can be seen from without, for customers never go within; but when the sun has turned to a copper ball and tumbled over the rim of the world—when evening winds toss spray above the wall—that road is transformed into a fashionable promenade. Tables and chairs appear in front of the cafés and men come to occupy them. Out from their offices, from counting rooms of commerce, from palaces and dingy huts, come the beys and the beggars; the seller of lemonade clashes his cymbals and the hawker of Indian figs shouts his wares.

It is a Noah's Ark of humanity—that promenade. The cocotte—painted and Parisian—swishes her skirts against the dervish; men of science touch elbows with fever-blooded adventurers; the swarthy Bedouin clicks his dice and calls his points across the café table to his blue-eyed Saxon opponent—for Alexandria is the strainer-rag of creation. She stretches her nets across the corner of three continents and hauls a catch of motley fish—Copt and Kurd and Sudani; Scandinavian, Greek and Scot—the flotsam of the Occident, the scum of the Orient. Tides of the East and tides of the West mingle and fret in picturesque confusion. Every derelict drifts to Alexandria, for Alexandria is the strainer-rag of creation.

Somewhat retired from the skirmish line of cafés, with a broader waste of sand between its striped awnings and the sea-wall, stands the Grand Hotel Rameses. Here, as in less pretentious quarters, men dine in the open air, looking toward the water and drinking the Mediterranean breeze. The dining space is scarcely more than a booth, built on the level sands adjoining the hotel. A partition, the height of a man's waist, supports the framework for an awning which flaps and shivers in the wind. Those who pass and those who sit within, each may see the other; the beggar may look at the bey and the pauper may observe the pasha as he dines. Men lounge in wicker chairs while drinking Turkish coffee and chatting over their cigarettes—men of the East and men of the West—and women of the West. Women of the East appear not in public places.

Old Reliable had not yet emerged from his fumigation adventure, and the anxious Colonel awaited him. He sat in the Rameses smoking room with the two British officers who had met him at the dock. They represented the New Sudan Syndicate and would conduct him to the proposed plantation. In this experiment, so dear to British hearts and so close to British pockets, the government lent its active aid and contributed its best men. Lyttleton Bey was fifty, wiry, resolute, tanned; MacDonald Bimbashi, thirty, slim, resolute, tanned. Both wore white linens. The American had already put himself upon a cordial footing—there being little difference between them in blood, ideals or traditions. The British officer in the Sudan is a picked man—the pick of picked men—else he will not be assigned to Anglo-Egyptian service. Lyttleton had campaigned with Roberts at Kandahar and with Kitchener at Khartum. MacDonald fought at Mafeking and lived in further hopes.

Colonel Spottiswoode leaned across the table, bowing to Gregory Lykoff and Demetrius Gargarin—the hunted and the hunter. They were three tables away from him, in the center of the smoking room. Though his acquaintance on board the Olga had been no more than a smile and nod in passing, yet he was glad to renew it and to recognize a familiar face. Being compatriots and cabin mates, it seemed natural that they should sit chatting over their coffee. They kept together because they feared to separate. Lykoff, on tenterhooks until Old Reliable had delivered his priceless cipher, felt easier if he knew exactly where Gargarin was. And Gargarin's sole chance of capturing that cipher lay in cuddling close to Lykoff. Meanwhile he waited for the man whom he had detailed to ascertain if Zack were entangled in their affair.

To people in conventional dress, Colonel Spottiswoode gave little heed. Those twisted turbans and filmy gowns fascinated him. Nubian waiters moved noiselessly among the tables in garments of white, the red tarboosh on their heads, red shoes on unsocked feet and broad red bands about their middles. A beggar tottered past, clutching the low partition with both hands and trembling in a palsy. The Colonel could only see the upper half of this man—a gaunt, high-cheeked Arab, with dirty bandages around his head. He groped along, peering under the canopy for such as might give alms to one groaning beneath the chastisements of Allah. When this man reached the front gap in the balustrade he fell, a limp huddle of rags, from which came forth an open palm and wheedling voice: "For love of the Prophet!—I am a famished man!—Allah will reward thee!" The Nubian waiter, reckless of Allah's rewards, kicked him up with none too soft a foot; he limped away like a crippled dog and sank again from exhaustion. Fiercely he reviled the Nubian: "May thy hand be blasted! May thy sons desert thee! May——" The waiter turned his back, intent upon the fetching of more cigarettes and the receiving of more piasters, with scant uneasiness for a beggar's malediction. Being no longer watched, the old man rose from the sands; his desert eyes roved across the spaces between himself and the sea-wall—looking for something or seeking for somebody. Then he came slipping back, inch by inch, until he had resumed his crouching position and his old whine: "May Allah prosper thee!—Behold, I perish!" But none took notice of him. As he stumbled back his shrewd glance of scrutiny rested no longer upon Lykoff than upon any other man. Lykoff gave no sign of recognition and beggars were far too common in Alexandria for the Bloodhound to observe him.

"Maybe I'll Have to Hire Another One Like Him for Zack"

Darkness came, as darkness comes in Africa, with the downgoing of the sun. Colonel Spottiswoode snapped his watch. "Isn't it time for that hackman to be getting back with my servant? I'm worried about old Zack."

MacDonald laughed. "Patience, my dear Colonel Spottiswoode; nobody hurries in Egypt. 'Haste! Haste!' we urge, and the Arab answers: *Bukra*."

"That must be like the Italian *domani?*"

"No; it's worse. *Domani* means 'tomorrow'; *bukra* signifies a vague and indeterminate future that will never come. Tarry in the Orient for a while; you'll get used to it and like it."

Lyttleton Bey clapped his hands. "*Wahid!*" he called. Instantly a slim yellow man appeared at his elbow with the respectful and scarcely uttered "Effendi." A few words in Arabic sent Hassan the servant out to take his stand and sentinel the approach of Old Reliable.

Everything was so new to the American that he took his eager chance to learn. "What was that you called out?" he asked, having already heard the word a dozen times.

"'*Wahid.*' It is the Arabic numeral meaning 'one'; we use it to summon a servant—one servant, any servant, the first servant who may hear."

"Oh! that's it. I was wondering if all of these yellow men were named *Wahee*."

"*W-a-h-i-d.*" Lyttleton spelled the word. "By the way, we have engaged your servant—your personal attendant. You can't get along without him and you can't get along with him."

"Fudl! Fudl!" He clapped his hands again. "Effendi!" Prompt answer came from a collection of benches and tables across the narrow side street—from a native coffee-house, where servants waited the orders of their masters. Fudl stood before them—the same gown, a tarboosh instead of a turban, and European shoes with white buttons. Fudl was a progressive.

"Fetch Mohammed Mansour."

"Very good, effendi." The Arab moved off silently and beckoned to a man who had been sitting on the bench beside him.

"Peace be upon you, Excellency. May Allah prosper thee and multiply His blessings——" Mohammed Mansour greeted them in a parroted sentence. A squatty Berberine, the color of a russet orange, he stood half bent and waited.

Colonel Spottiswoode was experienced in all sorts and conditions of negroes; but this was a new variety. It amused him to have a servant with red shoes and no heels, a long-tailed shirt of silk and confectionery stripes, and no breeches—eyes half shut, like those of a fat pig.

"What is your will, effendi?"

"Is this my servant?" Colonel Spottiswoode inquired of Lyttleton.

"If you like; Fudl has recommended him."

The inquiry lingered upon the Colonel's face, so Mohammed dived into the conjurer's pocket of his robe. He might have produced a white rabbit or a pianola, which would have surprised nobody; but he didn't. He unwrapped a handful of letters, well worn, breaking into creases and gaping at the folds.

"Dragoman for Americaine effendi in Nooyork; this that effendi he say: I, Mohammed Mansour, talk the Ingleese very good; honest man, he say—I, Mohammed Mansour."

Mohammed submitted this document as Exhibit No. 1. Colonel Spottiswoode put on his specs and examined it—all things in this country interested him. The Britons had hired so many servants and had disproved so many bogus eulogies that their faith grew censorious.

The Colonel indulged his curiosity concerning these letters wherein various American tourists extolled Mohammed Mansour as dragoman, interpreter, purchasing agent

Digitized by Google

herwoman, cook, camel-driver, first aid to the injured—the versatilities of Egypt.

One great pasha, see! Americaine prince; him you st could know. Sheekargo—see!" The Colonel nitted his lamentable ignorance of "Mr. Theophilus rwine"; but the peculiar name stuck in his memory.

How much are your wages?"

The month, three hundred piasters' tariff; it is noth-

I, Mohammed, can certify—for the love ——"

Hold on!" The Colonel stopped Mohammed's patter. ow much is all that?"

yttleton Bey interpreted: "A piaster is equal to tup-ce ha'penny—three hundred piasters would be three ereigns—about fifteen dollars."

What does he do for that?" The Colonel looked toward hammed and wanted to hear him talk.

Mohammed warmed up, turned on his orotund inflection gesticulated: "I show you the pillar of Pompey, the sque Ahmad. We see the birrymeed ——"

The what?"

The birrymeed—birrymeed—tall—so—*agib*."

Burymede? Where is that?" The American shifted inquiry to MacDonald—the place had such a sporty e, like a racecourse.

Birrymeed! Birrymeed!" repeated Mohammed.

He means the pyramids," suggested MacDonald.

Aiwah! Very good, effendi; yes, birrymeed; birry-d very much high; big climb-up. Tomb of great ——" Mohammed paused at a sign n Lyttleton Bey, who again explained: he Arabs have no letter *p* in their lan-ge and they cannot pronounce it. They byramid."

Aiwah! Aiwah!—yes, yes; birrymeed—ymeed." Mohammed smiled his satisfac-. "I show you dembles ——"

Peace, Mohammed!" Lyttleton silenced Berberine.

Thy will, effendi." Mohammed bowed listened with all deference. Lyttleton ounced the contract—in English for the erican's benefit: "Colonel Spottiswoode ages you for his servant. Your wages will seventy-five piasters the month, and all enses."

What the effendi says, so it must be. *ttar Allah kherak.*"

We depart this night for Cairo; then travel the Sudan, south of Khartum, in the ntry of the sun—a far journey. Go now make you ready."

Mohammed's eyes glistened. This meant g service at good pay. His master must chase much food and many necessaries ng the route; Mohammed, being thrifty, ld profit greatly in these traffickings. He those letters again in his robe and, bow-went his way. He had been gone but w moments when Colonel Spottiswoode st into a laugh. "Maybe I'll have to hire ther one like him for Zack."

Who is Zack? Your friend? Of course must have a servant." Lyttleton lifted hand to clap for Fudl, but the Colonel pped him.

Zack is my negro. I brought him from ne to wait on me; but since we left New rk the shoe has been on the other foot. It es all my time to look after him."

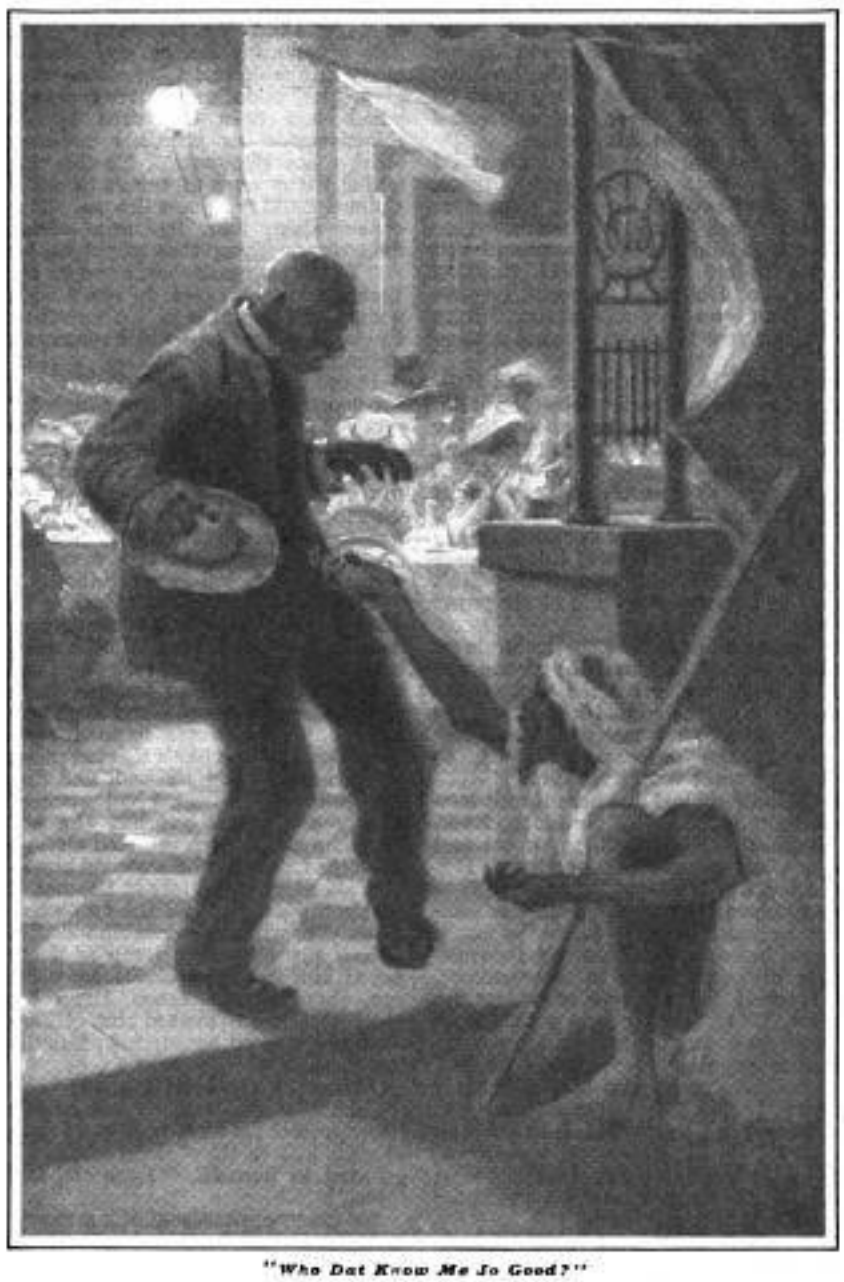
By all means—by all means ——"

No; I was joking. Yet I don't know. night be worth fifteen dollars a month to rid of wondering what has happened to k. He's a faithful negro, but he can of no help to me. We can use him on the ntation to show the new hands how to w and hoe —— Look! Look! Who are se people?—there—in the corner—stand-?" The Colonel directed Lyttleton's ention to a spectacular group of silent n. Just inside the room, beneath the opy, he beheld an oriental tableau the like which his American eyes had never rested upon. The tral figure—he would have been a central figure anywhere—was a powerfully built man, scarcely brown, near that sandy-reddish color of the desert. His elevated w, incisive eyes, clear-cut nose and thin lips marked n as a man of distinction in any land. Draped in robes many colors, elaborate and graceful turban, he stood h arms folded in repose, as if his superior soul scarcely ed the kaleidoscopic follies of humankind. Six gleam-spears formed a hedge behind him, in the hands of six id tribesmen. It was as if some desert sultan, with his dyguard, had stepped out from the Arabian Nights. No nder the Colonel whispered, "Who is that?"

Lyttleton glanced around and his face grew serious. ome day we may hear too much of that man—perhaps a more dangerous Mahdi. Even now his name is on the lips of all the faithful—Mohammed ben Muza Gazan, a sheik from the northern Sahara. See that green in his turban? He's a descendant of the Prophet. Gives the French and Spaniards no end of trouble. He dreams of uniting all northern Africa in a Moslem empire—Morocco, Algiers, Tunis—Egypt, perhaps. This is the month of the pilgrimage; he journeys to Mecca with a retinue of holy men and warriors—they are camped outside the city. Then he will be a *Hadji*, enormously increasing his prestige. His next step possibly is to preach a *jehad*, or holy war."

"There's fighting already among the Riffs," added MacDonald.

Lyttleton Bey whispered; the American listened with eyes fixed upon that unmoving figure. Hassan hurried across the sands, came in like a fluttering shadow and said something to his master.



"Good!—the carriage with your black man."

Lykoff and Gargarin sat nearer to the sheik, but Lykoff was not interested in desert problems. Through that gap in the low partition he could see the beggar and was first to hear the crunch of wheels that toiled through muffling sand. The carriage stopped and a British soldier stepped out. "Get down, old man; here we are," he said. Old Reliable climbed from the box where he had been sitting beside the driver.

Gargarin and Lykoff both observed a second carriage, which deposited the man whom Gargarin had sent to the quarantine station. Lykoff did not know this, but he saw something else which Gargarin never suspected. He alone saw the veiled inspection that the beggar gave to Old Reliable. Those Arab eyes searched the negro's face, gray hat, woolen suit, heavy shoes—it could only be the man with the message; none of his like was in the land of Egypt. The beggar groveled and whined and waited. Time is nothing to a beggar. The soldier marched in, between the chairs and tables, and saluted Lyttleton Bey. "Here is your man, sir."

"Very good." Lyttleton dismissed him.

Zack shuffled along behind his liberator, indignant at the outrages which had been heaped upon him. He passed the beggar, he passed the desert sheik; Old Reliable "warn't studyin'" these folks. He wanted to find the Colonel.

"Who Dat Know Me So Good?"

"Well, Zack, I am glad they didn't clap you in jail. Next time maybe you'll stick to me and keep out of trouble."

"Gawd's troof, Cunnel; you hadn't no more'n turned your back befo' dem yaller policemuns grabbed me. It sho is worrysome to be 'rested by niggers when you ain't doin' nuthin. Dey wouldn't lissen to no sense; jes shoved me in dat flatboat and ——"

"Never mind, Zack. We'll talk about that tomorrow; I'm busy now. Are you hungry?"

"Yas, suh; I ain't touched a bite o' vittles."

"*Wakid!*" called Lyttleton Bey. Zack looked around curiously and Fudl appeared. "Take this man and give him food."

"Very good, sir," Fudl answered his master.

Zack was mighty dubious about this long-shirted negro, but followed without protest in the direction of victuals.

"A peculiar person, I fancy," remarked Lyttleton as Old Reliable trailed out behind the Berberine. Then an extraordinary thing happened. Zack got quick action—so sudden, so dramatic, that it jerked every man to his feet. Everything was perfectly quiet in that room when Zack came abreast the Sheik Muza, who stood in the full glare of an electric light. The negro stopped and stared solemnly at the sheik from head to foot for one long moment of surprise. Slowly a grin appeared, lengthened, broadened and overspread his countenance. Recognize that fellow? Of course he recognized him. Hadn't Guinea Ryan tipped him the wink on board ship that there were plenty of brothers around here? Zack cast a stealthy glance toward his white folks. They warn't payin' him no mind. So he whispered a magic word to the sheik and made a complicated sign with his fingers; after which he raised his right arm and strode boldly to that desert chieftain. Nobody knew exactly how it happened—it happened in silence except for Zack, who rent the peaceful night. The first that Colonel heard was a yell from Old Reliable. "You niggers is too rough—lemme git up!"

The Colonel sprang up and ran toward him; Lykoff darted between the tables and stood beside the Southerner. Gargarin bolted forward—and the British officers. Old Reliable lay flat on his back, struggling in the sand. Four spearmen held him down, their weapons flashing in the light. They said not a word, but pinned him firmly and looked to their sacred sheik for orders. Muza stood motionless, his arms folded, contemplating the presumptuous black who had dared threaten his consecrated person.

Lyttleton and MacDonald seized the Colonel and prevented him from trying to release Zack by force. They knew the temper of these desert visionaries.

"Lemme go! Lemme go! Quit dis foolishness! I'm financial, jes same as you." He struggled vainly with the fierce-eyed men, selected for their strength. Lyttleton spoke in Arabic to Sheik Muza, but gained no answer. His sharp black eyes glittered with hate for these sons of Christian dogs. Turbans massed in the sandy space outside, waiting a word from him who represented the sanctity of their religion. Behind the Europeans stood other silent men in robes and turbans and sunscorched faces. It was the month of fervor and fanatics, the month of the pilgrimage; a hasty word might fan their smouldering zeal into a whirlwind of riot. The British hesitated. Lyttleton consulted with MacDonald. MacDonald shook his head. From the throng behind them an aged man came forth, richly dressed, with a band of blue in his turban. MacDonald made way. With grave salutations he salaamed before the sheik, addressing him in a tongue which even Lyttleton could not understand. Muza neither moved nor changed countenance; the old Arab spoke smoothly and his words were few. The spearmen looked only to their sheik. Muza nodded imperceptibly; but it was sufficient unto them who obeyed his nod as law.

The sullen spearmen loosed their hold. Zack scrambled to his feet and began brushing off the sand. "Dat ain't no way to treat a brudder—gittin' all dese white folks mixed up in nigger foolishness!"

Lykoff edged close to Gargarin, clutching a keen knife in his pocket. He had turned intensely pale. Passionately he scanned the Bloodhound's face. If by this trick Gargarin got possession of his cipher Lykoff meant to cut his throat—that much he could do for his slaughtered friends. His eyes flamed, but Lykoff never acted in haste. Old Reliable continued to brush the sand from his clothes. Not once did the negro feel his pocket to see if the capsule had been disturbed. And Lykoff thought him wise.

Keiser Cravats

A National Standard

For Easter and early Spring

Novelty Glacé Weaves

Cut bias (as above), rich effects, quiet and elegant. Also in many other designs.

$1 to $2

Keiser Barathea

All bright silk

In over 60 plain colors

Barathea is a difficult silk to weave in order to show the required lustre and to prevent the parting of the fabric. Keiser Barathea quality is lustrous and firm.

4-in-hands $1.50, $1.00, 50c.
Bat Wings 50c.

For sale by most fine furnishers throughout the country.

GENUINE Keiser Cravats bear this octagon trade mark.

BEST MADE — KEISER CRAVATS — WEAR GUARANTEED

MAKER
JAMES R. KEISER, INC.
NEW YORK

Grand Prize
St. Louis
World's Fair.

Business continuous since 1860.

Makers also of Keiser Handkerchiefs.

Knitted 4-in-hands

Made of high-grade natural silk, popular crochet (as below) and other stitches. In bright colored stripes to be worn with the high cut waistcoats.

$1.50 to $3

Gargarin strolled back, took his seat again; but there was no triumph in his step and the other Russian knew it.

"Come along, Zack." Colonel Spottiswoode drew him toward the table they had just vacated. The loungers about the room settled down and discussed the significant incident.

"Now, Zack, tell me the truth—what was that racket about?"

Zack hung his head and paid strict attention to picking off a few grains of sand.

"Out with it!"

Old Reliable grinned sheepishly. "It warn't nuthin' 'cept a passel o' tomfoolery. Some niggers, jes soon as dey git lodge clothes on 'em, dey commence ackin' biggity—specially dese yaller niggers. Yonder's dat Gran' Gardeen—jes look at 'im, all puffed up wid hisself!"

"That what?"

"Gran' Gardeen. I hailed him wid de sign an' password and dem four niggers shoved me down. Dey can't have no 'nishiashun right in front o' de hotel. Must be new members what don't know deir business."

Lyttleton and MacDonald listened intently, trying to get the straight of what had occurred. Perhaps there was a deeper meaning, and they wanted to know. "Kindly repeat that—I do not understand," said Lyttleton. Zack began to feel easier; his apologetic grin became beautiful and beaming. "You see, mister, dem niggers is members o' my lodge. Dat feller wid striped clothes on, he's de Gran' Noble Gardeen; dat's de head leader boss. Dey must be havin' gran' lodge. Every nigger's got a right to act de fool at gran' lodge."

The Britons stared at Zack with stolid faces. The matter was beyond them. Colonel Spottiswoode listened, almost as mystified. Then he saw a glimmer.

"Zack, what did you take that man for?"

"Take 'im fer? I knows: Gran' Gardeen o' de Sons o' David. I knowed 'im fust minute I sot eyes on dem clothes. White folks don't never ketch on to what niggers is doin'."

The Colonel in turn stared at Old Reliable, whose serene smile reassured him. The negro had wriggled from beneath the heel of death without a thought of having been in danger.

"Zack, weren't you afraid they might kill you with those spears?"

Zack grinned tolerantly at the Colonel's ignorance of facts. "Lordy, Cunnel, dem stickers couldn't hurt nobody. Dey ain't nuthin' 'cept pasteboard, wid silver paper on 'em."

The American couldn't help it; he threw back his head and laughed. Lyttleton and MacDonald promptly hushed him. "Sh! These Arabs might consider that we are making sport of their religion. See, they are passing the news from mouth to mouth—but what was it all about?"

The Colonel choked down an almost hysterical desire to laugh. "Go along, Zack, and be good. Get something to eat and keep out of trouble." Lyttleton Bey added a few words in Arabic to Fudl. That prudent person led his dangerous companion out by another way, where he would not come in contact with the tribesmen. Meeting his own people in the shadows, Fudl touched his forehead significantly. "Madman!" the people said unsmilingly and went their way with the tidings.

"Rather singular person that, I fancy," the Scotchman remarked when Colonel Spottiswoode had failed to make either of them understand what Old Reliable had done.

"No; he's just an ordinary bullet-headed negro. He'll be lucky if he gets yard-broke before he gets his neck broke."

MacDonald nodded such a cheerful assent that the Colonel went on: "That settles it. Let's get him a servant—a good, cautious wet-nurse."

"Yes; he might cause much annoyance," Lyttleton promptly agreed. "I shall send for a man. *Wakid!* Fudl!"

Fudl came running. "Effendi."

"I have need for a servant."

The adroitness with which these Arabs produced other Arabs amazed the Colonel; it was like rubbing the magic lamp for a jinnee to appear. This man was scrawnier and somewhat darker than the others; he was a Dongolawi and his name was Said. Like Mohammed, he had letters; in fact, he had the same letters. When Said unfolded them the first name to catch the Colonel's eye was "Theophilus Warwine."

"Here," he said; "this is the same letter that Mohammed ——"

Said and Fudl joined their voices in a duet of explanation—"Said's wife made the mistake—true it is, Excellency ——"

Said snatched up the package and darted out, winging his way like a bat through the lights and dodging into the darkness. Breathless, he came to the coffee-house of Selim. Mustafa, the dragoman, was playing at draughts. Said threw down his letters. "Mustafa, give me quickly ——" A fair exchange is no robbery. Said swapped recommendations with Mustafa. Each could use one as well as the other—legal tender in any lands. Then Said sped back to his prospective employer. "True it is, O thou Excellency—they were of my brother—my wife—forgiveness, Excellency ——" Simple-hearted Said, he got the job—and Old Reliable got a servant.

When Fudl led Zack homeward from the feeding-trough Lyttleton clapped his hands. "*Wahid!*"

"Here, effendi," answered Said, the scrawny brown man.

"Zack," said the Colonel, "this man is your servant. He will take charge of you."

Zack did not smile; it was too momentous an occasion. From the fullness of his active day he remarked: "Yas, suh; I speck I got bizness aplenty fer him to tend to."

"I don't doubt it," laughed the Colonel. "Now, don't bother us for a while."

MacDonald and Lyttleton spread a stack of invoices and other papers on the tables—lists of planting machinery, plows, hoes, every thinkable variety of cotton seed, bagging, ties, supplies of every description, which had been suggested by Colonel Spottiswoode as probably necessary to stock a new plantation. To this they had added many curious things of which the Colonel could not guess the use. They discussed them item by item—seeking to discover anything that might be lacking.

"You must remember, my dear Colonel, that if we need a tool we can't walk into a shop and purchase it. We must send to England or America—which requires weeks, perhaps months."

It was a formidable outfit. "I'm afraid, gentlemen," remarked the Colonel, "that you will find this a very costly experiment."

Lyttleton shrugged his shoulders. "We want to see if these lands will produce cotton. If it costs ten shillings a pound our directors care nothing for that. They must produce cotton." Then they plunged into a wilderness of plantation detail: labor, water, climate, soil—everything.

Their preoccupation left Zack to his own devices; he had become as circumspect and cautious as a pet coon. The Sheik Muza had departed with his retinue. Zack was glad of that. A band was playing somewhere along the front—and Zack was glad again. The awnings flapped overhead. White spray arose like a sheeted rain-ghost, appearing over the sea-wall and dropping back again. The beggar had returned. His skinny arm stuck out like the withered limb of a tree. Zack rambled aimlessly toward the front; Lykoff watched him closely. The old negro stood idly at the gap, almost beside the beggar, and the two were quite alone. The whining voice stopped. "Zack!" Lykoff saw the negro jump as if one had called him from the tomb; he whirled to run, then glanced down. The beggar's hand stretched up toward him. "Zack!"—that single word again; low, but distinct, unmistakable.

"Who dat know me so good?"

Zack saw the beggar's left hand sneak from beneath his dirty rags—and the glitter of gold was in it. "Huh! huh!" Zack grunted to himself. "Dese sho is funny folks."

He gazed curiously at the money; then something stirred within him. "Dar now! Dat white man—on de steamboat ——" He rummaged hastily through his pockets, fished out the capsule and held it in his fingers. Lykoff was talking with Gargarin; he saw everything but spilled not a drop of the liqueur as he poured.

"What dat you say?" Zack leaned closer to the beggar and asked again.

"Zack," repeated the beggar; but ten goldpieces were assurance enough. Zack reached for the coin. The beggar's long, lean fingers clinched upon it; the hand was sinewy—the fingers made of whipcords and whitleather. The beggar nodded toward the capsule.

"Huh!—you want dis here pill? Sholy, sholy."

Zack dropped the capsule into the beggar's hand, which transferred it instantly to the beggar's mouth. The left hand loosed

Every Experienced Mother Knows

that there are times when her own milk disagrees with her baby.

Sickness, excitement or worry affects her milk and her baby suffers. How then, can mothers expect their little babies to thrive on cows' milk, which nature never intended for a baby's tender little stomach?

In cities, it is very hard to get cows' milk which is less than thirty hours old. Such milk is apt to hold disease germs which can and do cause fatal illness. All cows' milk is too heavy for little babies. No amount of changing at home will make it like healthy mothers' milk. But pure, rich, cows' milk does hold some of the things your baby must have to grow strong and ruddy and to help it fight off sickness. The reason

Nestlé's Food

has raised thousands of healthy babies and made so many sick babies well, is because it is a milk food. Only nature can make milk—NESTLÉ'S is made from the rich, pure milk of healthy cows from the NESTLÉ dairies where the milk is fresh and clean.

All the good of the milk is kept and just enough wheat, sugar and other strength-giving elements to make a powder which, when you boil it in water for two minutes, makes a food that only mothers' milk can equal.

Feed your baby NESTLÉ'S Food twelve times at our expense.

Write now and secure the trial package of 12 feedings and our Mothers' Book which tells all about a baby's care.

In the household, and particularly in the kitchen, where cleanliness and convenience are most essential, there is nothing that will take the place of

ScotTissue Towels
"Use like a blotter"

As an improvement on the kitchen roller towel they insure the cleanliness of the hands that prepare your food, because each towel is used but once and thrown away.

The absorbent quality of the ScotTissue Towels makes them far superior to any fabric for the polishing of fine glassware—there is no lint to adhere to damp surfaces.

They are splendid for cleaning windows for the same reason.

For draining the grease from doughnuts, fish, and oysters "ScotTissue" Towels are superior to anything else you could use.

The men appreciate them after a shave. They leave the skin so soft—and chap-proof.

Many other uses will suggest themselves.

"ScotTissue" Towels come packed in a dust-proof carton.

150 Towels in a Roll, 35c
(West of Mississippi River and in Canada, 50c)

Fixtures, 25c. to $1.00

At any drug, grocery or department store. Buy your first roll to-day and see for yourself their many home advantages. Ask for a copy of the novelette "Mrs. Marvin's Motto."

its gold. It was a wide-open transaction, conducted under the electric lights. Lykoff did not tremble as he raised the liqueur to his lips. As yet Gargarin had no suspicion.

Zack stepped inside to a brighter zone of light, counting his money as he came, biting it with his strong white teeth. He hadn't an idea whether it were good or bad, but he had once seen a white man testing gold money in that way. The beggar moved off very slowly—as a cloud dissolves. A quick-stepping European came toward the hotel. The beggar straightened visibly, stood erect for an instant, then relapsed into senility. That movement betrayed him to Gargarin. The Bloodhound sprang up, overturning his chair. At his signal, two men who sat in the corner leaped to their feet; another pair came running from the servants' café; and yet two others from across the sands.

The beggar saw them all. He dropped his staff and shook off his rags, revealing a slender body, lithe as a reed, surrounded by men who closed in upon him.

Gargarin rushed across the room and vaulted the partition. Then the beggar moved. Swiftly he crossed those shining spaces of sand and vanished into the yawning cavern of an alley. A naked man, the color of the night—like a night-bird he had disappeared. The chase disappeared behind him, a silent chase of close-lipped men, darting as swallows dart into the black mouth of a chimney. They were gone. For a moment Lykoff stood beside his table and watched those flying figures in the dark. Then he settled down again to his liqueur.

Old Reliable stood dazed. "Dar now! Don't dat beat de Jews! Dat beggar nigger sho did arrive away from dis hotel in a hurry."

There was no outcry, no confusion, except the overturning of Gargarin's chair—which attracted no attention. Old Reliable chuckled to himself: "Huh! Swallowed dat pill; den lit out like a rabbit in a sedge fiel'. Dat must 'a' been a runnin' pill!"

The British officers had gone inside the hotel. Colonel Spottiswoode strolled toward Zack, where he stood with mouth wide open. "Well, Zack, how do you like this town?"

Zack slipped that easy money into the bottom of his pocket and chuckled. "I never see so many niggers wid so many diffunt kinds o' nightshirts on."

The Colonel laughed. "We're going to a country where they don't wear anything at all. You'd better be getting ready for the train."

The Colonel looked round to see if any one observed him before trying to use his first lesson in Arabic. Then he clapped his hands and called: "*Wahid!*"

"Here, effendi." Mohammed ran from across the street so promptly that Zack was delighted.

"Come." The Colonel turned into the hotel with his servant. At the door he stopped. "Zack, call your man and get all the baggage ready."

Zack adjusted the lapels of his coat and glanced across to the café where Said was sitting, doing nothing. It would be so much fun to stir him up. He was mightily tickled with the idea of calling a man who had to come. Zack Foster liked this town. Just as the Colonel had looked round him, so did Zack, to be sure that none of his white folks were noticing. He grinned and grinned; then wiped the grins off his face with a big, rough hand. Pitching his voice at the full, he leaned over the low partition and yelled: "Whar he?"

"Here, effendi." Said bowed before his master. Zack wanted to laugh, but received his servant with impressive solemnity.

Nobody looked at him; he was not getting his due attention. Zack took out a broken cigar, licked it all round so that it would draw, then fired up. "Come 'long, nigger," he ordered; and puffing like a switch-engine Old Reliable entered the hotel.

(THE END)

Dramatizing Ibsen

ELMER HARRIS, the New York playwright, was talking to a friend about Augustus Thomas, when he happened to remark that Mr. Thomas was dramatizing Gibson's pictures, The Education of Mr. Pipp.

"Huh!" grunted the other incredulously. "He can't dramatize them."

"He can't, eh?" retorted Mr. Harris. "If he wanted to that fellow Thomas could dramatize Ibsen!"

"Now, for real chicken-soup!"

THE kind *you* would like to make if you had everything handy and could afford the time and trouble. Even so you couldn't make anything better than

Campbell's CHICKEN SOUP

A rich wholesome broth with plenty of good chicken-meat in it; the best-imported rice; creamery butter, leeks, parsley, celery and delicate spices—these are some of the good things that go to the making of this delectable soup.

Does that word sound too big? Just try the soup yourself and see if we haven't described it exactly. Try it for dinner *today*. You'd better order a dozen while you're about it. Money back if not satisfied.

Barrett Specification Roofs

J. T. Ferguson Building, Memphis, Tenn.
Roof on this building is 40 years old and still water-tight. Roofing applied by Bartholomew Roofing Co., Memphis

A Roof Which Outlasted a Brick Wall

THE building shown herewith was built in 1872 and roofed with pitch, felt and gravel along the lines now advocated in The Barrett Specification.

The brick wall recently required rebuilding, but in the work of renovation *the roof did not require any attention.*

Four times the roof has been exposed to fire; a neighboring hotel burned down and it was covered with falling embers; another building, just across the street, was destroyed and this roof was swept with flame; two other fires, which threatened the destruction of the entire block, left this roof undamaged.

It has never leaked and never been repaired.

We do not claim that all Barrett Specification Roofs will last 40 years, although we can point to innumerable instances where this type of roofing has lasted over twenty years and is still in serviceable condition.

Barrett Specification Roofs cost less than metal roofs and only a little more than short-lived ready roofings. The fact that these roofs have *no maintenance expenses* such as painting or coating, enable them to show a unit cost per year of service much lower than any other kind.

Most of the first-class buildings of the country are covered with roofs of this type because they give *better protection* at *lower cost* than any other kind.

Special Note We advise incorporating in plans the full wording of The Barrett Specification, in order to avoid any misunderstanding. If any abbreviated form is desired, however, the following is suggested:

ROOFING—Shall be a Barrett Specification Roof laid as directed in printed Specification, revised August 15, 1911, using the materials specified, and subject to the inspection requirement.

Copy of The Barrett Specification, with diagrams, ready for incorporation into building specifications, free on request. Address our nearest office.

TRADE B MARK

BUSINESS HELPS

"IT IS ideas that count; in fact, there is nothing else that really counts." I heard a very successful Western business man say this several years ago, and there was something in the words that struck me as being very impressive.

One of the greatest manufacturing establishments in the United States is so eager to receive new ideas from its employees—so eager to draw out, discover and profit by any original thought that may come to any one of them—that it has organized a special system for the handling of this vitally important matter.

The corporation has establishments in various cities, and it has organized a committee made up of engineers and superintendents who are located at different points. Each individual member of the committee is expected to be in constant touch with all the employees, big and little, in his particular district; and, on the other hand, it is well known by all the employees that the system exists, and they know who the local member of the committee is. Each committeeman is expected to discover ideas; each employee is expected to tell his ideas to the committee. And if, from suspicion or any other cause, a man with an idea prefers to send it to the secretary of the committee rather than submit it to the local member, there is no objection whatever to his doing so—the important thing is to get it before the committee.

The committee meets at regular intervals at this or that point and takes up for consideration every suggestion that has come in. The pros and cons, the good points and the bad, are thoroughly gone over. With some of the ideas, a single objection may be so obvious as to be fatal; with others, there must be long and careful consideration; with yet others, there is little or no doubt from the beginning that the verdict will be favorable.

Whatever finally seems good to the majority of the committee is given a commendatory vote, and the management is fully informed as to the supposed merits of the new idea. A sum of money, as a direct reward, is at the same time voted to the originator, the amount depending upon the degree of merit and originality shown and the importance of the improvement. The money given is not the whole reward, however, nor is it even the best part of it; for every man who has an original suggestion accepted and adopted knows that his chief reward is to come from having attracted the attention of his superiors, who will henceforth be watching him, ready to encourage and advance him as rapidly as he can make good.

The Idea and the Ideal Man

If the idea is patentable the corporation sees to getting the patent, which is granted in the name of the successful man, but at once assigned by him to his employers.

It has been only a few years that this system has been in operation, yet already a very considerable number of improvements have been passed upon favorably and adopted. And the employers and employed alike understand that the keynote of the system is benefit for both sides. On both sides there is the enlightened selfishness which, as some writer has remarked, is at the foundation of so much of the world's advancement.

Every great corporation, every well-managed corporation, is just as eager to find new ideas as is the corporation whose system I have described, though I do not know of any other that has a system of discovery and encouragement quite so far-reaching, so shrewd and so efficient. And that the great employers attach such value to the thinking up of ideas points out that there is no better way of advancing from unimportance to importance, or from importance to greater importance, than by showing your employers that you are a man of originality.

Nor does all this point out advantages for employees alone. It points out, and very strongly points out, that there is no better way for a small corporation or small business house to put itself on the road to becoming a large one than to begin this systematic recognition and encouragement of ideas among those in its employ. If employees of originality are kept pleased and satisfied they will remain with the house instead of becoming restless and leaving; and the house will therefore secure for itself that most important of all assets, the loyal service of men who can think. The originality of one will induce originality in others, and ambition and emulation will prove potent factors. Any employer who feels that his house is not growing as it should can do no better thing than imitate the big and successful men in seeking out ideas.

* * * * * * * * *

It used to be that if a man thought of an invention he feared to let any one know of it because of the danger of his idea being stolen—as, indeed, too often it was. And so the man would work out his idea in secret and send it to the Patent Office—perhaps get a patent and perhaps not; and, even if successful there, likely enough he would find himself in possession of something that was quite impossible for him to handle to advantage. And very often, from the need of unattainable money and special apparatus, the inventor was unable to pass through even the initial steps sufficient to construct his model and present it at Washington for judgment. Often, too, an idea is not a new thing in itself, but an improvement or adaptation to be used in connection with something already in successful use. And there is many a good idea that is not even patentable.

Kidnapping the Brain Child

Such considerations, such discouragements, however, need not for a moment be thought of by the employee of an up-to-date concern, for it will gladly assume the general burden of managing the affair and let the employee get only advantage from it. And every well-managed house is particularly anxious to avoid the possibility that some one may filch an idea from the discoverer and proceed dishonestly to profit by it. That ideas were stolen—or, at least, that there was strong reason to believe that some ideas were stolen—was one of the facts that brought about the formation of the committee of superintendents and engineers; in the detail of its proceedings there is constant and special watchfulness for this possibility. And the reasons are obvious. It is not only because of a general desire for fair dealing, but because, by permitting the originator of an idea to lose credit and reward, the employer would be sure to lose his good will and the advantages that would come from continued originality; and would also be pretty sure to lose the man himself to some other house—all of which would be very bad business.

A great advantage that comes from the submitting of an idea to one's superiors is that it gives both employed and employer the chance to profit by collaboration. Many an idea is really only a germ and would not amount to anything without improvements from the cleverness of others besides the originator. In its first suggested form an idea may promise well, but at the same time be quite impossible from any practical standpoint. In such a case, if the originator is working it out entirely by himself the whole thing fails—no possible advantage can come from it; but if he can put it up to his employers—if they are up-to-date employers—they will not only see to it that his own advantage is secured, should it be a success, but they will do everything possible to make it a success by arranging for other brains to mull over it, and to plan and contrive and visualize. With capital behind them, several keen minds get to work upon the problem of putting the idea into its best and most practical form. Combined brains, collaborating brains, often improve a good thing and often make an impossible thing possible. And the final result, though owing primarily to the man to whom came the inception of the idea, is also owing to those who aided him and without whose aid the idea would perhaps never have been developed.

And another excellent feature about collaboration is that it is by no means necessary that the man with the idea, if it be mechanical or engineering, shall have the technical skill necessary to plan details or superintend experiments. If he is clear-headed as to his proposition and if he really has an inspiration he need only explain his inspiration, thus putting it on the way to

Digitized by Google

development by men who are masters of mechanical detail.

And, of course, this present-day way of doing it makes it possible to go ahead with good ideas in many a case where the originator, if compelled to rely entirely upon his own resources, would be hopelessly checked by lack of money.

. . . . . .

However, it should not for a moment be considered that new ideas must be inventions and nothing else. A new idea in bookkeeping may be discovered; a new idea for the collection of accounts; a new idea for the dressing of a show window; a new idea in office management; a new idea for the handling of men—it is immaterial what the idea may be. It may be an idea which involves the spending of tens of thousands of dollars in the manufacture and installation of new machinery, or it may be an idea that does not involve the spending of a cent. No matter what line a man or a woman may be in, there is always the possibility of improvement in it; and, what is still more important, there is always a chance to see a possibility of improvement in the position higher up at which the employee, whether big or little, is aiming, and which he will attain much sooner by displaying a practical knowledge of how it may be bettered.

It used to be that the whole duty of man, or at least of a business man, was comprised in the words: "Do your work well and your work will be appreciated."

The business world has gone far beyond that in the course of recent years. Not that it is any the less necessary that one shall do his work well. Of course one must do his work well if he wants to hold his job; but to get beyond that job, to reach out and get better and better jobs, one must not only do his work well, but he must do it better—that is to say, he must find improvements and be prolific in ideas and suggestion.

"If a man would make himself felt as an important and worth-while member of an establishment," said a Chicago merchant to me, "he must do much more than merely do his work in such a way as not to incur blame. He must have ideas about better methods, short cuts, clever contrivances, ways and means of getting results. He must stand for progress and for increase of efficiency. He must constantly be on the alert to discover new things for the good of the house."

New Ways to Tie Up Old Parcels

And I often think of a summing up by the general manager of one of the New York department stores. He was explaining how his establishment sought for and welcomed all sorts of ideas, and how it encouraged them by rewards and recognition; and he concluded with:

"Nothing is too small to consider. A saving on even the smallest things is likely to make a good-sized total by the end of the year. We welcome any idea, even if it is only how to tie up parcels better."

. . . . . .

"Whenever a machine can do the work of a man we put in a machine," said the superintendent of a big Pittsburgh concern. "In this lies the keynote of success in present-day manufacturing. The readiness or unreadiness to put in new machines marks the difference between success and the lack of it."

And, indeed, nothing is more remarkable than the readiness of the great concerns to go to immense expense to carry out improvements. Yet this does not mean that the successful manufacturer puts in new machinery carelessly, rashly, heedlessly, without much thought except that it is new. The constant tendency is strongly toward the new, but this tendency is as constantly kept in hand by sagacity and caution.

As to the means by which the tendency is kept under control, the big companies differ in details; but most of them follow substantially the same course. One of the very largest, after deciding that an idea seems good, has the whole matter figured over most carefully before the new idea is adopted; and the precise cost of the present way of doing and as precise as possible an estimate of the proposed new way are set down before the management for decision.

However, it is by no means even then a mere matter of which way is the cheaper by itself—the new way may in itself be much dearer; and the proposition for the management is to consider whether or not, on the whole, the change would mean advantage. As a matter of fact, the mere expensiveness of an otherwise excellent proposal is seldom a bar to its adoption by any good concern, for expensiveness is likely to be offset by general improved efficiency. And here, again, is where the small manufacturer who wishes to become a big one should follow the example of those who have succeeded—he should and must learn to look upon things large-mindedly; he must broaden himself; he must learn to know that money-saving and money-making often come from money-spending.

Every day somewhere, by somebody, a new idea is hit upon. Why should not you be the one to hit upon it and have the advantage of it? For, as already suggested, the idea need not by any means be mechanical, but may apply to any branch of your work or business. The important thing is to be on the lookout for ideas and to be able to recognize an opportunity when you see it!

As a preliminary to the thinking of the new and worth while, there comes the necessity of being familiar with the present processes that one wishes to improve; and this, whether the improvement is to be mechanical or of some other kind.

The Tell-Tale Furnace Smoke

A favorite dictum of the manager of a great retail house is that within three months any new employee ought not only to understand his own work thoroughly, but should also have a good knowledge of how the entire work of the establishment is divided up and carried on—a good idea of the divisions of the different departments and of the reasons for them. And this kind of seeking for information does not mean impertinently pushing into some one else's work, but merely such a legitimate thirst for knowledge as every factor in an establishment ought to have. "It is only the man who is holding down his job with one hand and reaching out with the other for a job higher up that I care anything about," I remember some one saying. "You must keep on advancing; there is no such thing as standing still—retrogression begins the moment you come to a stop."

If a man does not preliminarily soak in a full and comprehensive knowledge of his work he will find himself proposing something immature and absurd—something which could come only as a half-baked idea from one with half-baked knowledge.

I often think of one of the most ingenious men I know—a man who rose from one of the minor positions in his establishment to be the managing head of it. This particular establishment is a great mill. He is always thinking of some new way of doing a thing and always welcoming those who have something new to propose. So complete is his own knowledge that he can walk through the mill and see at a glance whether or not even the tiniest things are going properly. And his men love and respect him, for they know he is not a mere meddling martinet, but one who has thrown himself heart and soul into his work and is anxious to reward and advance all who will imitate him. I remember, as an example of his knowledge, that as he used to drive down to the mill from his home he could tell at a glance, from the degree of blackness of the smoke coming from the stacks, whether or not the furnaces were being fired properly or extravagantly, and later, on his regular morning trip of inspection, he would caution any foreman who had an improperly fired furnace in charge.

. . . . . .

An encouragement to any man with ideas that his ideas will be taken up and adopted, and a striking example on the part of one of the most powerful of corporations to all penny-wise and pound-foolish concerns, was an advertisement that appeared not very long ago in the trade journals offering valuable machinery at a ridiculously low price—though, as I happened to know, it had cost sixty thousand dollars only a few years before.

The point was that something new had been thought of; a man with an idea had shown how to put in something more efficient, and that necessarily meant the discarding of the sixty-thousand-dollar lot. The machinery had become superannuated from the mere fact that a man had come along with an idea—much, by the way, to the man's own advantage. So the orders of the general manager were:

"Advertise that stuff and send out personal letters to small manufacturers. Try for six months, but don't give it room longer than that; if it isn't sold in six months scrap it!"

A Ten Strike

Samples from ten popular Whitman's packages gathered in

Whitman's Sampler

"Variety," we agree, "is the spice of life." This, then, is the "spiciest" package yet.

It contains generous lots of each kind from these favorite packages of Whitman's Chocolates and Confections: Continental Chocolates (bitter sweet), Super Extra Honey White Nougat, Super Extra Chocolate Covered Mint Marshmallows, Super Extra Chocolate Covered Caramels, the Fussy Package, Super Extra Chocolate Covered Almonds, Assorted Jordan Almonds, Roasted Jordan Almonds, Super Extra Chocolate Covered Brazil Nuts and Super Extra Chocolate Covered Maraschino Cherries.

All these packages have hosts of friends, but very few know all of them. Here, in the *Sampler*, you will find old favorites and new delights. Then, when you want one kind alone you can get it in its own separate package.

Tipped in the package is a loose leaf describing each of the ten packages that is sampled.

The Sampler box is covered with a facsimile sampler in the quaint, old-fashioned needlework that has become the prevailing new fashion. All women appreciate its exquisite workmanship.

You can buy the *Sampler* for one dollar at the selected stores everywhere that we supply, by express, direct from headquarters. You can tell the store—usually it's the best drug store—by the sign:

Chocolate Covered Almonds

A Fussy Package

Chocolate Covered Caramels

Chocolate Covered Brazil Nuts

Assorted Jordan Almonds

Caramel Chocolates

Roasted Jordan Almonds

Honey White Nougat

Chocolate Covered Maraschino Cherries

AGENCY Whitman's CHOCOLATES & CONFECTIONS

Buy from your local agent. Where we have no agency we will send the *Sampler*, postpaid, on receipt of $1.25.

THE WORD GENTLY SPOKEN

(Continued from Page 9)

is—wid his hat off whin he meets you an' the illegant turn to the tongue of him—an' that helpful too! Whin the plumbers was fixing me faucets yisterday I had to carry me wather from the hydrant in the coort; an' I was jest raising the pail whin Mr. Moggins comes up. 'P'mit me!' says he; 'an' he ups with the pail, for all I cud say or do, an' carries it in for me. An' 'Don't name ut,' he says; 'it's a pleasure!' If I could thrain Mike to conduck himsilf like that I'd ask for nothin' more."

Mrs. Moggins flushed with pride.

"Bill's cert'nly a-gettin' a steam-laundry finish on him," she said; "but somehow ——" She sighed.

"If he's the same man indures as he is out ——" insinuated Mrs. Clancy. "Some is not."

"Oh, Bill ain't no different," said Mrs. Moggins. "I ain't had an ugly word out of him sence I don't know when."

That was true. At times Mrs. Moggins' nerves impelled her to sharp speech in the hope of—as she put it—"startin' somethin'," but the more acid and unreasonable she became, the more soft-spoken and good-humored was her husband. At the close of one of these unequal passages, Mrs. Moggins jabbed a knife viciously into the butter, pried off a piece and told him to open his mouth.

"I want to see if it will melt or whether you'll have to swallow it whole," she said. "I'll bet my next new lid you'll choke on it!"

"If you'll excuse me I'd ruther spread it on a slice of bread, muh dear," answered Bill forbearingly. "If you don't mind I'll take a slant at the paper."

With which he settled back in his chair and began on the headlines. His wife went on with her supper without paying much attention to him, until a sudden and violent exclamation made her drop a fork to the floor.

"Whatcha know about that!"

"About what? What in the world ——"

"Listen here!" said Mr. Moggins rising: "'Con-ductor a Chester-field. Willi-am Moggins Larded—Lauded—by Grateful Passengers!'"

Mrs. Moggins snatched the paper from his hand and read:

"The pink of politeness, the perennially blooming crocus of courtesy, the mold and form of affability and the shining pattern and example to all street-car conductors is, beyond cavil or question, Conductor William Moggins, who gathers in nickels and transfers on the Kedzie Avenue line. This is the unanimous verdict of the patrons of the aforesaid line and it was confirmed today by the careful observation of a Tribune reporter. Between Lake Street and Sixty-third Street, Mr. Moggins said 'Thank you!' thirty-two times; 'If you please!' thirty-seven times; 'No trouble, ma'am!' fourteen times and 'Excuse me!' forty-three times.

"He carefully refrained from exhorting passengers to 'Step lively!' and he left the platform five times to assist those whose infirmities or tender age required assistance. He explained the impossibility of riding forward on a backward transfer in terms at once urbane and convincing, and made the soft answers that turn away wrath to two of the species crank."

There was more of it, but the significant part of it was an interview with the superintendent, which the reporter had taken pains to secure.

"I am happy to say that politeness in our employees is the rule rather than the exception," Superintendent Rooksmith asserted. "At the same time," he continued, "I consider that Conductor Moggins is entitled to a good deal of credit; and the company is disposed to recognize merit in a practical manner whenever a suitable opportunity occurs."

Mrs. Moggins' eyes shone.

"Bill," she cried, "you sure done it!"

"Yes, muh dear," returned Mr. Moggins apathetically—"I've sure done it!"

Dilate as she would on the splendor of the prospect opening before him, Moggins could not be stirred to anything approaching enthusiasm. He went to bed rather earlier than usual and again his dreams were filled with oriental terrors. The "super" took to himself the bristling catwhiskers of the Chinatown joss and, from

Standard Taper Roller Bearing

STANDARD

Is a saving of 75% in power worth while?

Standard roller bearings actually make possible the highest efficiency of the modern motor car.

This sweeping statement is warranted by the fact that Standard bearings are used by 97% of the automobile manufacturers in America.

These bearings, either of the roller or ball type, are of vital importance because of the extent to which they obviate friction at every load-bearing surface.

As compared with plain bearings—the ordinary journal, that is—Standard bearings produce a saving in power running in some instances as high as 75%.

To duplicate with plain bearings at all points the efficiency of a 30 H. P. car fitted with Standard bearings, would require approximately, a 90 H. P. engine.

Your bearings, therefore, play so important a part in power economy, that if you are wise you will scrutinize this feature even more closely than any other, in the car you purpose buying.

Far beyond the question of mere economy in upkeep and maintenance, you will consider the greater factor of safety.

You will see, in the Standard taper roller bearing shown above, the most perfect friction-saving and safety device for the equipment of a motor car's front axle.

Whatever the shock—however sudden the demand made upon these bearings—you will find them absolutely trustworthy.

Careful study of this subject will show you why the great preponderance of American manufacturers specify Standard bearings.

You will find in our little booklet: "The Road-Bed of Power" interesting and timely information on this subject. Ask for it.

Standard Roller Bearing Co.

Philadelphia, Pa.

his gilded shrine, issued order number 36,990, instructing all conductors to tie their pigtails with pink ribbons.

Mr. Moggins departed for his day's work in a depressed state of mind; and Mrs. Moggins, leaning over the iron-pipe railing to watch him descend the stairs, noticed that his shoulders were becoming bent.

v

IT WAS long before his usual hour when the Pink of Politeness returned to the McGonigal Flats, and there was nothing depressed in his air. His shoulders were thrown well back and his broad chest and square jaw were both thrust well forward; his feet came down solidly and with decision, and his little eyes rolled from side to side in the old manner until they lit on the janitor.

"Hello, Bill!" said the autocrat of the flats. "What's bringing ye home so early?"

Moggins glared at him.

"Is it any of your dog-rotted, blistered business?" he asked.

The janitor quailed before the baleful eye that challenged him.

"I didn't mean to butt into your affairs," he said. "I was just askin'."

"So was I!" said Bill. "You got your answer, didn't you?"

"Sure!" assented the janitor, moving away.

Mr. Moggins proceeded to the entrance of the building and there he was accosted by Mr. Clancy, his neighbor from across the hall.

"It's a cilibrity you're a-gittin' to be, they do be tellin' me," said Mr. Clancy. "The 'crocus of courtesy,' I hear!"

"Sure!" agreed Moggins grimly. "Smell muh perfume!" And he advanced his clenched fist beneath the other's nose and shook it. "If you give me any of your guff, you flannel-mouthed harp, I'll make you think you're the night-bloomin' cereus of the casualty ward!"

Mr. Clancy began to remove his coat in a businesslike manner.

"Will we shtep up the alley or am I to spiflicate you right here?" he asked.

"Mike!" called a shrill voice from the upper landing. Mr. Clancy hesitated and resumed his coat.

"Yis," he responded. "I'm coming. I'll see you later, Mr. Moggins."

Moggins ascended the steps, and the Mold and Form of Affability followed him *au troisième*, stopping at his own door and kicking its panels so that the sleeping echoes were awakened to reverberating clamor.

"For Heaven's sake!" exclaimed Mrs. Moggins.

"Don't for-Heaven's-sake me! Get out of my way and leave me in!" growled her husband, pushing by her.

"Well, you are perlite, I must say!" declared the lady, overtaking him in the kitchen.

"Perliteness be blasticated and skewidgered!" said Bill Moggins. "I don't have to be perlite. I've quit the company and got a job on construction, bossing a gang of Dagos; and I'm just aching to get at the macaroni-guzzling Guineas an' tell 'em what I think of 'em! Get supper on, you!"

But he grinned in the old way.

"And I don't know but what it's all for the best, after all," sighed Mrs. Moggins later. "It was all right for a change and in some respects I liked it; but if he'd kept on another month I know that Bill would have bust!"

Not So Helpless

F. S. HIGHT, the manager of the Willard Hotel in Washington, had a plumber at his house for several days plumbing around.

Hight noticed that the plumber had no helper with him. He talked to the plumber about this lapse, and called the attention of his own family to a situation that he had never observed before—a plumber plumbing without a helper. Also he spoke about it to various persons round the hotel.

Presently the bill came in. In it were charged, with great care and particularity, a large amount of materials, and then occurred this line: "For plumber and helper, $96.00."

Hight sent the bill back and suggested that as there had been no helper with this expensive plumber, it was his opinion that the bill was subject to revision in that item.

He received this reply: "*Dear Sir:* It is quite true the plumber's helper was not at your house, but he helped round the shop getting the tools ready, and so forth."

WHEN the car builder says to the tire maker "Don't talk quality to me, it's prices I want"—*you lose.*

The car builder who *buys* his tires on a price basis is *selling you* a *tire* that is *built to meet his prices.*

Remember—the car builder does not guarantee the tire on the car he sells you; his responsibility ends there—but yours begins.

We could build them cheaper
But we won't
We would build them better
But we can't

Insist upon Diamond Tires on your new car before buying and you will get them. Diamond Tires are built and sold on a *Quality* basis only. Their first cost to the car builder is a little more than on other tires, because of the additional mileage and wear that we build into them. Start your new car out on Diamond Tires, and you'll stick to Diamonds ever after. That's the only way to cut ultimate tire expense to the lowest.

In addition to dependable Diamond dealers everywhere, there are FIFTY-FOUR Diamond Service Stations. Diamond Service means more than merely selling tires—it means taking care of Diamond tire users.

Bachelors' Friend HOSIERY

TRADE MARK

Reg. U. S. Pat. Off.

This new summer weight sock weighs less than ¾ of an ounce to the pair. But this is not the only reason why it is the leader among men's light weight hosiery. There is 100 years' experience in stocking making behind this hosiery. It is the very acme of men's footwear, because combined in it are the highest experience and the finest obtainable materials.

The high splicing of the heel and the strong reinforcement of the foot are obtained by cotton that costs $1.40 per pound. This means that, although it is doubly strong, it does not show above the shoe as in the ordinary stocking. Placing an electric light inside the stocking brings out the reinforcement that resists all wear. Yet there is none of the patched appearance that makes you avoid so many cheap stockings.

It is the gauziest, silkiest and most elastic stocking of its class, and by reason of its excellence of manufacture *we guarantee six pairs to wear six months.*

Latest improved features. Combed Sea Island cotton only used in its making. French welt—the best top ever put on a cotton sock. Toe looped on two-thread looping machines, which gives double wear.

You should know how much greater comfort there is in this sock. One trial will show you why it is demanded by discriminating buyers everywhere.

Electric light is necessary to bring out the reinforcement

We do not sell direct. But if no dealer in your town has them, we will see that you have an introductory lot if you will send us money order covering the amount. Charges prepaid.

JOSEPH BLACK & SONS CO.
York, Pa.

Four Grades:
6 pairs, $1.50
6 pairs, $2.00
6 pairs, $2.50
6 pairs, gauze weight, $2.00
Six pairs guaranteed to wear 6 months.

No need of this since he wears Bachelors' Friend.

HOW WE GROW DEAF

(Continued from Page 19)

absolutely untouched and as perfect as ever. So that, if we can only get sound waves to reach the internal ear by some hook or crook, it can still hear them. The easiest and, so to speak, the most open route for sound waves to reach the nerve of hearing is, of course, through the ear canal, the drum and its bones; but luckily this is not the only channel.

Just as soon as sound waves are loud enough to jar through the bones of the head, they can reach the nerve of hearing and be heard, though the ear be completely blocked. Upon this fact depends the usefulness—unfortunately not very great—of the various trumpets, tubes and fanshaped hearing instruments. Some of these are pressed into the ear; some rest upon the upper front teeth if these be still our own; but all such appliances help chiefly by virtue of the fact that they collect sound waves and communicate them directly to the bones of the head and through them to the nerve of hearing.

The eartrumpet assists the hearing partly by the size of its mouthpiece or bell, which collects the sound waves and somewhat magnifies them, and partly by its pressure on the ear which brings the instrument into direct contact with the bones of the head. The speaking tube is more effective yet, because the lips of the speaker are held so close to its mouthpiece that the vibrations of his voice are communicated directly to the walls of the tube and carried by them to the bones of the deaf person's head and thus to his nerve keyboard.

It is impossible to say even approximately how frequent deafness is in the community—partly for the reason we have just been considering, that so few cases ever reach the extreme or disabling stage, and partly from the fact that Nature with her wise and kindly foresight has provided us in advance with nearly three times as much hearing as we actually need for ordinary purposes. It is a matter of common observation in the consulting room, or in the clinic at the ear hospital, when patients come in complaining that they think they are "beginnin' to get hard of hearin'," that they have usually lost from one-half to two-thirds of their normal hearing. They can barely count the ticking of a watch at eight or ten inches, for instance, which they should hear at forty inches.

Mistaken Ideas of Cleanliness

There is this consolation, however, that, if we can succeed in improving the condition of their drums up to where they can hear the watch at fifteen inches, they have regained all the hearing they need for practical purposes and will consider themselves cured. This margin gives us a valuable means of warning in advance; and if any one over forty has the slightest doubt or suspicion about his hearing it is not a bad idea for him to test it occasionally by the simple process of trying how far away he can hear his own watch tick, which usually should be about thirty inches, the distance varying with the loudness of the ticking.

If a systematic test were to be made of, say, a thousand persons of fifty years of age and upward, it would probably be found that most of them had lost some of the surplus or keener edge of their hearing; but very few of them would probably ever have recognized the fact. Those who had lost enough of their margin of hearing to make it obvious, either to themselves or to their families, that they were becoming deaf would only be a moderate-sized group; and, even of these, probably not more than one in ten would have lost enough hearing to make it a matter of grave inconvenience or even serious annoyance to them, while not more than one or two in the thousand would have become "stone" deaf. So, though the outlook for complete cure of one who has begun to grow noticeably deaf is not encouraging, the prospects of his being spared the graver and more disabling degrees of loss of hearing are very good.

Though little need be said about the forms of deafness due to disease of the two extremes of the hearing apparatus—the external and the internal ear—yet there are a few facts of practical importance about both. First and briefest, the almost sole condition of the outer ear which seriously interferes with hearing is wax. This curious,

half-oily, half-gummy substance is the natural secretion poured out by glands in the skin of the outer ear, which resemble the sweat-glands over the remainder of the body. The secretion's utility is, first, to keep the skin properly lubricated, supple and waterproof; and, second, by its gradual outward flow to carry out of the ear canal and deposit in the bell of the outer ear such dust, lint, bacteria, and even tiny insects, as may have been blown into the canal. A considerable amount of wax in the canal of the ear is absolutely necessary for its health and safety, and the main thing to remember is that the wax is to be strictly and absolutely let alone until it has flowed out into the hollow of the outer ear, where it can be wiped away with a cloth over the tip of the finger in the ordinary toilet of the face and neck.

It is not until the flow of the wax becomes checked in some way and begins to dry and pile up in large masses in the ear canal that it causes any trouble whatever with the hearing.

The two most common causes of this damming up of the wax are: first, middle-ear disease, which in some curious way appears to alter the chemical character of the secretion of wax in the outer ear; second, meddlesome interference with the normal and necessary amount of wax in the ear under mistaken notions of cleanliness, such as endeavoring to scoop it out with the twisted-up corner of a towel, or even with one of those inventions of the Evil One, the earspoon or earpick. The homely advice of the old German proverb is thoroughly sound and reliable: "Never clean your ear with anything smaller than your elbow."

A Tough Member

The proper method of removing wax is simplicity itself—gentle syringing with plenty of warm water through a syringe with a long and properly curved nozzle; but this should never be undertaken by any one but a physician, as the damage that may easily be done to the delicate tissues of the drum is far greater than any that will result from leaving even the largest plug of wax in place. The actual plugging effect of wax in producing deafness is very much less than was formerly supposed as, unfortunately, when the physician has syringed out every particle of wax from the ear he often finds a thickened and distorted drum behind it, which was causing two-thirds of the hardness of hearing.

We may relieve our minds of one dread of the future. Not only is the nerve of hearing exceedingly well protected against disease or injury but it is astonishingly enduring and tough and fatigue-proof in its own proper business, so to speak—that of receiving and responding to the sound waves. Not even the horrible racket and cacophonous noises of modern civilization can injure it in the slightest degree; and there is no danger of our being deafened, except momentarily and metaphorically, by the whole Wagnerian overture of city life, with all its accompanying clanging and shrieking, rattling and roaring, hammerings and explosions.

Legend and fiction to the contrary notwithstanding, there is no authentic instance on record of deafness produced by noise, no matter how loud or how maddeningly incessant. The only apparent exception is that the discharge of a cannon or an explosion of dynamite may rupture an eardrum; but this is simply due to the direct violence of the explosion and has nothing directly to do with the noise of it. Like other ruptures of the drum, recovery is usual; and such impairment of hearing as may result is due to the damaged condition of the drum.

The most citified civilized man, provided he has escaped middle-ear inflammation, has just as keen a sense of hearing as the freest and wildest savage, the only difference being that the civilized man does not know how to interpret every faintest whisper and sound as does the Indian hunter, for instance. Even an engineer could beat an Indian in delicacy of hearing, when listening to discover whether his engine was running properly at every point.

THE APPLE OF DISCORD

(Continued from Page 14)

the case and the doddering and finger-mumbled protests of Mr. Wilmerding was so violent as to seriously interfere with her heart's action.

Lanier's incisive manner changed with startling abruptness. He leaned forward still farther and his intent gaze fairly swam in her ultramarine eyes.

"And in spite of all that," said he, "I know perfectly well that you acted from the very best of motives and never dreamed of being unjust and unkind. I didn't know it at the time, but I know it now—since I have had the honor of meeting you. It is all clear enough, and the only wonder of it is that I didn't see it in that light before. And yet I doubt if you could ever guess why it was that you did what any reasonable person would call a dishonorable thing, and never yourself saw it in that light." His sudden smile flashed out at her.

"Why——" she began rather dry-lipped, when he interrupted.

"I don't intend to tell you; I don't know you well enough. But I do know, even in this short time, that it would be quite impossible for you to do anything that wasn't based on a good, sound, conscientious motive. Since I walked through that door I've come to realize that I made a very unfortunate mistake in trying to revenge myself on the Chimney Corner. Oh"— he made an impatient gesture—"why couldn't you have set your dignity aside for a few minutes and sent for me in the first place? You'd have found me sympathetic, just as I find you, underneath your oversense of obligation to effect the impossible, and a few minutes' talk with you would have been enough to have cleared me out of the place. And I'm so glad you didn't."

Mrs. Wilmerding roused herself with some obvious effort. Her face was flushed and her general expression slightly dazed. But a certain insistent idea had fastened itself in her head, and she obstinately refused to go on with the argument until this had been made clear.

"Before we say any more," said she with an attempt at her habitual self-possession, "will you please be so kind as to tell me why—how—that is, what you said a few minutes ago"— the poise crumbled a bit round the edges— "about knowing me well enough to be sure that my act was not—was—justified?" She paused helplessly.

"No," said Lanier curtly, "I won't. I'd have to have your friendship and your confidence to tell you that. Let me say this, however—I believe you to have acted from the very best of motives, and I am sincerely sorry for the annoyance I caused you in anchoring off the reading room."

Mrs. Wilmerding passed her hand across her forehead.

"Are—are you going to stay where you are now?" she asked.

"Yes."

"What if—if I asked you now to go away? You say that you would have done so at first; why not now?"

Lanier made a gesture of impatience.

"It's different now. I can't see how I'm bothering anybody where I am. At first, two weeks ago, I could have gone without interfering with my work. Just at present I'm in the thick of it—right at the most crucial stage. To change my location would mean a serious break; getting a tug and hunting a good surrounding, and all that. It might be fatal to the piece."

Mrs. Wilmerding drew a deep breath.

"You have been very generous," said she. "Don't think me unappreciative. But I have the interests of the Chimney Corner very deeply at heart, and I can't help but feel that you are a—a very disturbing factor——"

"But how?" he demanded. "I'll not come ashore here—unless you ask me to. What harm can I do? Why drive me away? You are a literary woman; why not be friends and sympathetic? You might come aboard some day and see my stage set and hear the music and the libretto and give me a bit of criticism. It's all for art and beauty—and the things that make life worth while. Must I go?" He rose from his chair and took a few short, impatient steps. "Because I will if you absolutely request it." And he turned on his heel and looked at her keenly.

Mrs. Wilmerding turned to him a very troubled face. It had occurred to her

Queen Quality tastes fine

SOME tobacco is so strong it will push your hair out by the roots; other kinds are so steamed and weak and tasteless that you might just as well go back to the corn silk of your boyhood.

We make Queen Quality for the fellows who want it just right.

It is convenient to use, burns freely and tastes—well, it tastes so good that a new word ought to be invented for it. To smoke it is to be kissed by my "Lady Nicotine."

A big blue bag of it costs a nickel. Get it today at your dealer's; then you'll sit down and write to us and say *"Why didn't you tell me about this years ago?"*

within the last few minutes that through her particular efforts the colony was driving away, or was trying to drive away, the most interesting personality that it might hope to have. In fact, it flashed across Mrs. Wilmerding's mind that perhaps she was in a position to drive away the only interesting personality that the colony might ever hope to have. And the worst of it was that this personality had suddenly become extremely interesting to Mrs. Wilmerding herself.

"There is no doubt that we owe you something," she said. "Stay by all means, if you like. And—and perhaps you will come and dine with us," she added.

Lanier smiled. "Thank you," said he; "but I shouldn't think of abusing my privileges. Besides, just now my work is absorbing all of my time. As soon as it is finished I'll clear out. Meanwhile, I mean to confine my shore exercise to the other side of the inlet. And if you or any others of my late enemies can find time to come out aboard my old hulk I shall take great delight in showing you how comic opera is made and I shall hope to get a valuable criticism. You see I'm not doing these things for money. I've always had enough of that for my modest needs. I'm trying to contribute to the joyousness of life—and its beauty. And now, if you will excuse me, I'll go. Thank you so much for your kindness and your tolerance." And he looked at her with his wonderful smile.

Mrs. Wilmerding rose and stood for a moment facing him. Her soft cheeks had a high flush just beneath the eyes: one of those flushes that go with a certain mistiness of the eyes themselves and are sometimes to be seen on the faces of young girls at the opera. Lanier's last words had stirred Mrs. Wilmerding's protective instinct, one might almost say her maternal instinct. After all, it occurred to her, he was still very young—a vast six years her junior—and she felt that he must lead a very lonely and friendless life. It is doubtful if there was a person within a radius of a thousand miles who was less lonely and friendless than Lanier. But the idea pleased Mrs. Wilmerding and seemed to present the situation from an entirely different point of view.

Stepping toward him, she impulsively held out both hands, looking at him with her pretty head tilted slightly backward.

"Through my fault the colony has made a great mistake," said she. "I am sincerely sorry. Will you forgive me?"

Lanier was touched and surprised. Without answering he took the two proffered hands in his, bowed over them and then, meeting impulse with impulse, brought them together and touched the back of the uppermost with his lips. An early European education had given a semi-Continental flavor to Lanier's manners, and there was probably but a single person in the colony who would have criticised the graceful act. Unfortunately, however, this one person was at that very moment passing the open French windows that gave on the veranda. The next instant his shadow fell across the tableau. Mrs. Wilmerding snatched away her hands and Lanier looked up to see a tall young man, with very black hair and an angry face, standing on the threshold.

"I beg your pardon," said the newcomer, and glared at Lanier.

The color flooded Mrs. Wilmerding's face. "I must say, Ravenel, you are rather inconsiderate to startle one so."

"Sorry," he answered. "I was on my way to the reading room and I stopped to see if you were coming down for tea."

"Very well," said Mrs. Wilmerding impatiently. "Go on slowly and I will overtake you."

Ravenel hesitated for a second, then with a rather sulky, "Sorry to have interrupted you. Thought you were alone——" ducked his glossy head and withdrew. Mrs. Wilmerding turned to Lanier. Her face was flushed with annoyance.

"That is Ravenel O'Sullivan," said she. "I did not present him because I was displeased with his behavior. I'm afraid he didn't learn very good manners at college. Informality is sometimes carried a little too far in the Chimney Corner."

"That is apt to happen where everybody is so well acquainted," said Lanier casually. "Goodby, Mrs. Wilmerding."

He left the house and started to walk slowly back to where he had left his boat.

"H'm——" he said to himself as he strolled along. "Jealous cub, young Ravenel—h'm!"

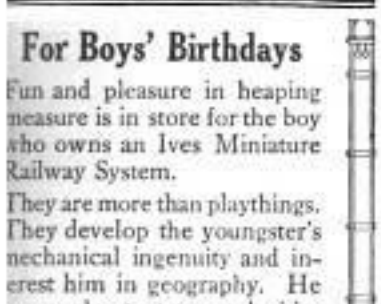
For Boys' Birthdays

Fun and pleasure in heaping measure is in store for the boy who owns an Ives Miniature Railway System.

They are more than playthings. They develop the youngster's mechanical ingenuity and interest him in geography. He learns about states and cities through which the railroad can be imagined to pass.

Ives Toys



An Ives Train makes a dandy gift for your boy's birthday. If he already owns a Train, give him more cars, trackage, stations, turntables, semaphores or bumpers.

The guarantee of the oldest and largest miniature railway manufacturers in America goes with every Ives Train. Look for the name Ives on each piece.

Leading toy, hardware and department stores sell Ives Trains (mechanical and electrical, costing from $1 to $25). If you cannot buy them in your town, write us.

Boys: Send for our new story booklet, "How Six Boys Built a Railroad." Mention the name of your toy dealer.

The Ives Mfg. Corporation

Southern Red Cedar Chest Co., Dept. 75, Statesville, N. C.

A REBUILT LIFE

(Continued from Page 6)

"So, for the last three weeks of that vacation, I worked like a horse myself and had those two boys working with me the same way. I found I was making more money than ever, though you might not think it much after all. When school took up the boys had to go; but I made an arrangement with them to keep on working for me Friday afternoons and Saturdays.

"I just had to have regular help and kept on trying until I found it. This time I got hold of two middle-aged colored men who had been housemen for a while when they were younger. One was laid up with rheumatism too much to hold a steady job as houseman; the other was such a hard drinker that he always stopped working for two days after pay day.

"Both men were fine workers, did what I told them and did it well when they did work. My rheumatism man worked whenever he could; sometimes for two weeks he wouldn't miss a day, then he might drop out for three or four days at a time or average two or three days a week for a while. The other man I could count on usually from Tuesday morning until Saturday night.

"I got to depending on them more and more actually to do the work, spent more time getting orders and showing my men what I wanted done; for on Friday afternoons and Saturdays, with the two boys, I had four hands, you see. Saturday is the housekeeper's day—nearly everybody wants things to look clean on Sunday; so on Saturdays I usually had work enough for them all.

"Whenever one of my men was off and I needed an extra man, or more work came in all at once than they could do, I always turned in and worked with them just as hard as ever. I tried to bunch the work as much as possible, to get all the work I could in a certain good residence part of the town, where it would be fairly near together—especially when I had the four hands working—so as not to lose much time in getting round.

"It was a good residence section—not the richest or most fashionable, but a moderate-priced residence section where the people kept only one servant, who was not expected to do outside work. There are thousands of homes like that in any town."

New Fields for New Hands

"I usually worked them in pairs—the two men as a pair and the boys as another, but I never worked the white boys and negroes on the same job. When two worked together they got to working against each other almost before they knew it, to see which could do the best or most work, which was the better man or classiest cleaner.

"I noticed that pretty soon, and took to offering a prize of a half dollar extra to the one of each pair who did the best and quickest work. That half-dollar prize was worth at least two dollars a pair to me every week. If you have ever worked men you know how that is.

"I couldn't keep all the work absolutely bunched, and before the winter was over I bought a second-hand bicycle for a few dollars. Bicycle riding may not be stylish, but I wasn't out after style and it is certainly useful. That wheel helped me get a lot more work and oversee a lot more than I could possibly have done walking.

"Early in the winter I had gone to board with an old couple who owned their little home but lived mostly off his pension. It wasn't much of a place; in fact they lived in a narrow little street, with a two-foot sidewalk that is almost an alley—and they lived plain. They did not charge me much board. It was near that part of the town where my work mostly was, and they were honest and kind.

"Say, do you know that being kind is a whole lot? It means everything to a man when he is sorter broken down and alone and without folks. The table fare was plain but it was well cooked, and the little cottage was always clean—and, best of all, they always seemed glad to see me come in and were interested in me and my affairs without being meddlesome or nosey. Then, too, there was never any quarreling; it was peaceful and restful to get in at night, like a sure-enough home."

(TO BE CONCLUDED)

Two Points to Remember about Ireland's Gloves

1st. They have a written guaranty of quality and wear.
2nd. They are better than the guaranty.

Two Points to Remember

In other words our bond which insures the gloves against *any* defect states the very minimum of service that the glove will give. We do not know how to guarantee the beauty, the distinctiveness or the style of these gloves—but you can see that when you buy them, because all these features are embodied in them.

IRELAND'S
GUARANTEED GLOVES

We try to make Ireland's Gloves for Men, Women and Children the very best gloves in the world.

The material we buy is the finest obtainable—no gloves at any price can be made of better leather. The cutting, shaping, stitching and embroidering are done by skilled experts. When finished, every detail of workmanship must be correct or the glove will not be guaranteed—will not go out bearing the name "Ireland."

Ireland's Guaranteed Gloves are made in four leathers, Mocha, Cape, Glacé, and Chamois—from $1.50 upward. The guarantee slip in the glove and the monogram on the clasp will identify it as Ireland's.

Write for the Book, "The Story of a Glove"
It will interest you. We send it to you free if you tell us the name of your glove dealer.

Herald Square, New York

With 12 Blades

WHY WE NEED A MERCHANT MARINE

(Concluded from Page 7)

these results—they were simply the course of a new development; and, instead of following the sea for adventure and wealth, the East began to go in for culture and art, and that sort of thing; and the first thing the nation knew it wakened up without any merchant marine at all. It was simply a phase of development; and now we are entering on another phase."

"Discriminatory duties!" said Secretary Sharwood, of the Maritime Exchange, Philadelphia. "Ah, there is dynamite in that suggestion—dynamite that might hit us harder than any of our rivals. The Maritime Exchange here put itself on record on that subject twelve years ago; and we have never had any reason to modify the conclusions reached at that time. We said then that this would be disastrous to American shipping and would encourage importations into the United States by rail and thus build up foreign steamships and drive traffic from American roads to Canadian ones. It would mean the abrogation of thirty-seven treaties with foreign nations and upset trade with every great nation in the world. Should foreigners retaliate by taxing goods sent to their countries in American vessels, that would more than offset all gain—for our heavy sea cargoes are eastbound, not westbound."

"Such duties are so dangerous as to be out of the question," said a leading official of the New York Board of Trade. "They would simply force an international trade war and destroy our foreign markets."

Discriminatory Duties

"Suicide—sheer suicide!" said the American agent of several foreign liners. "We can't do it without cutting our own throats! This whole merchant-marine question is simply part of the larger question—America at the parting of the ways! What is she going to do about it? We slapped Canada's overtures in the face for twenty years; then when we were ready for broader trade relations with Canada you know what happened. Suppose we put on discriminatory taxes against British vessels to our ports, how long do you suppose it would be before a preferential tariff scheme would bind colonies and mother country together with a stone wall round them against all our imports?

"Do I believe in the United States going on contributing billions to the marine supremacy of other nations? No—never! And that is just the point. We have been trying to fence the ocean with protection for fifty years. What is the result? We have almost driven the American flag from the sea. Give us free ships—the right to buy ships in the cheapest market; give us free tolls, international and domestic—the railroads were given land, why should we not be given free tolls?—give us a free sea; and this country would not stand second in maritime supremacy to any nation in the world! We pay higher wages, but we save in efficiency and machinery. Untie our hands; throw aside these hampering laws—and we'll build up our marine as we did a century ago. When we have a merchant marine of our own we, and not foreign nations, will reap the benefit of Panama. We will profit from the enormous outlay on harbors. We will save for this nation the millions now going to foreign carriers."

"What has caused the decline? Why has not Philadelphia the sea commerce of the Clyde? It is too complex for me," said an officer of the Philadelphia city docks and ferries. "But this I know: Though we think we have spent so much on our harbors, our spendings are small compared to the outlay of other nations for maritime trade."

Later, a secretary of the department sent me this compiled statement of the cost of harbor improvements here and abroad:

New York—population four millions—to date	$100,000,000
Liverpool—population half a million—to date	200,000,000
San Francisco—population half a million	50,000,000
Hamburg—population half a million	125,000,000
Boston—unfair to give population, as suburbs are not included	15,000,000
London—population seven millions	100,000,000
Baltimore	12,000,000
Antwerp	95,000,000

Copyright 1912, The Royal Tailors

le feels at Ease among the Mightiest
The Royal Tailored Man.

Good appearance" alone may not win you the respect of big en; but it will surely make you feel more "at home" among

m. ¶ No actor, however great, can play Macbeth his best in his street clothes. And few men can ole-heartedly act and FEEL the rôle of success ore strangers if dressed in the costume of failure. Good clothes kindle self-confidence. Nothing helps more surely to give that "just right" feeling than a "just right" suit of clothes. A "well-groomed-front" is worth more than all the liquid-bracers in the world to make a man feel worthy of the best and on equal terms with the biggest.

al-Just-Right-Clothes

The very basic idea of Royal Tailoring is the idea of Just Right Clothes. When you go to your local Royal dealer's store to order a Royal Suit—you go with the intention of ordering exactly what your body and taste dictate and approve. You pick the woolen you want; the shade and surface and texture you want, and the fashion you want.

You put yourself "down on paper"—dimension by dimension—for our cutters in Chicago or New York to follow in cutting your suit.

And you buy on a guarantee of "All Pure Wool" and absolute satisfaction—or No Sale—Absolute "Just-Rightness" or we keep the suit.

If all men knew of the Royal System—there'd be no "pretty-nearly-right" dressers. For why should any man take *partial* satisfaction—when $20, $25, $30, and $35 will get him, thru the Royal Service, the utmost in All Wool made-to-measure clothes?

Even the very day for delivery is guaranteed in Royal Tailoring. If your garment is not completed on schedule time, we forfeit $1 a day in cash, for each and every day's delay. This service is a "Service of Certainties."

Why Beautiful Homes Are Lined With Compo-Board

The Modern Wall Lining

It is superior and so much more satisfactory than lath and plaster in every way that it makes an irresistible appeal to the wise home builder.

It is quicker to put on and lasts longer. In thousands of cases its permanent reliability has been put to tests of from five to twelve years. It does not peel off, or sag, like plaster. It will not mar by knocking furniture against it. Durability means economy.

The Poorest Home Builder Can Afford Compo-Board

Most artistic effects can be obtained with Compo-Board in plain, papered, or kalsomined walls, or in a large variety of panel designs.

It is moisture proof and sanitary—impervious to heat and cold—keeps the house warm in winter and cool in summer.

Compo-Board has many other uses about the house and yard—making an extra room in the attic or basement, finishing off summer houses, building partitions and remodeling old houses. Can be nailed over old plaster.

Compo-Board is sold in strips four feet wide and 1 to 18 feet long, and is carried in stock by dealers in nearly every town and city. Write for our

Free Book and Sample

Learn all about this modern wall lining, why it is economical, and how you can use it to advantage. It will be to your profit to write today.

Northwestern Compo-Board Co., 4303 Lyndale Ave. No., Minneapolis, Minn.

THE RECORDING ANGEL

(Continued from Page 21)

two planets cannot revolve in the same orbit. Two lions at meat in the same cage have been known to create a scene by tearing each other's manes in an argument. A lion may eat with his knife and still be welcomed in the circle—not because he is of it, you understand, but because he is "so interesting," don't you know? He is the freak that they examine between courses.

Mrs. Fanning-Rucker's festival would have no place here but for the fact that Jim Bone had progressed so far in the scale of things that he became the lion of it. And he sustained the rôle with a ripping sincerity that thrilled and delighted his hostess, and that bade fair to win him a place at her very dinner table. You may permit the celebrity within your gates to insult you upon the same amiable principle that the king's fool enjoyed the impotent privilege of speaking the most offensive truth to his royal master.

Young Fanning-Rucker had strenuously opposed his mother's determination to include Jim Bone on her guest list for this occasion. Young Fanning-Rucker was not in a position to go into the particulars of his objections, not the least of which was a large boot-sole-shaped bruise in the small of his back. He refused to admit, even to himself, the annoyance he had experienced frequently of late at seeing Jim accompanying Sylvia to and from Amy White's house and escorting her to church.

"I tell you, Mother, he is a brute," he exclaimed with some heat, when he discovered her intention.

"We are all brutes, Fanning, at bottom," said the old horse-faced cynic, flattening her wide nostrils with an ugly smile as she poured her son's breakfast coffee.

"I have sometimes suspected that I smell a little weasel smell about you. You make money so easily, my dear Fanning. It is another way of being a brute."

Her son blushed. There was no love lost between them.

"And he is really an outlaw," Fanning went on, after a self-subjugating pause.

"I can imagine nothing more delightful than a real live outlaw at a lawn party," she retorted. "Besides," she went on seriously, "he is today the most prominent man in this town and county. And to leave him out would be like leaving out the central figure of a picture."

"Don't expect me to be civil to him," exclaimed Fanning, in a perspiration of mortified pride.

"He'll never miss it, your civility, Fanning; it is too silky for a man anyhow. Bone will get most of his courtesies from the women. He's the kind of man women grow crazy about."

"I can't see why," said Fanning contemptuously.

"That is because you have the limiting sex of a man. But, somehow, you have missed the masculine keyboard in the development of your character."

A party on Mrs. Fanning-Rucker's lawn was like an expurgated picnic. The trees and grass attended. There were the same little summer clouds overhead that always threaten showers upon such occasions; but the people were not all there, and they were different—too old, too sedate. As Jim Bone advanced up the avenue toward the open gateway of the lawn he pushed his hat far back upon his head and looked over at the groups seated here and there in the shade. He thought they had the appearance of a Sabbath-school class that had grown stout and aged without ever getting out of the primer catechism. They sat so primly, as if they were still expecting the question:

"Who made you?"

And were prepared to answer as usual:

"God!"

"Who was the first man?"

"Adam!"

"Who was the first woman?"

"Eve!"—A chorus of children whose voices had changed into the guttural tones of age.

The women predominated. Only a few men stood herded in a little group near the gate, each with one leg set forward, each chewing a quid of tobacco and occasionally sneaking his head as far over his shoulder as possible in order to spit behind him, the ladies being in front. Colonel Lark, who wore a red tie and held his hat in his hand, appeared to be monopolizing the conversation. He was really prancing a little like a fat old dock-tailed cob, thus indicating that he was conscious of the distant female grandstand. The other men stood skulking hip-shod, so as to speak with that deceptive listlessness that the married male so often shows in mixed company if his wife is present, and to which no married female would give in, no matter if it were possible to have half a dozen husbands present.

Aside from the row of elderly women already referred to, who held the entire stare as they sat side by side in the shade of the veranda, Bone observed that most of the women present were gathered about a thin feminine wraith, who reclined in a wicker chair that was tilted far back upon the very heels of its rockers. This was Agnes Yancey. From being the least renowned member of Ruckersville society she had suddenly become the most conspicuous woman in it. It was known far and wide that she was about to have an operation. This was positively her last appearance before that event. Her head rested upon a pillow on the back of the chair with that wilted insecurity sometimes observed in a fowl afflicted with the disease known as the limber-neck. The folds of her white skirt hung to her benefactress. It is queer, when you think about it, how the mind of a woman controls the set of her clothes. Many of the sex are destined to join that company of redeemed spirits whose feathers forever trail in the dust. Agnes, who had never enjoyed any particular distinction in the style of her person till this summer, during which she had at last yielded to the call of invalidism, now wore gowns that were as symbolic of backache and hysteria as Sylvia Story's were of health and passion and beauty. They laved her limbs like tears.

Jim, who feared a sick woman as he could not have feared a raging lioness, paused in the gateway. He was dressed "within an inch of his life," as the saying went in Ruckersville, which means that he had got the tops of his boots inside his trousers and that the latter swelled out accordingly. Their color was a light greenish gray, and the effect produced by his legs, therefore, was of two huge stalks of celery that had wilted halfway up to where the skirt of his black Prince Albert reached and concealed them. As a matter of fact he wore no vest, the weather being, in his opinion, too warm to wear this extra garment. He wore a silk shirt and a green puffed tie around a standing collar, the points of which met his chin on either side. He was shaved until his cheeks gave the impression of having received a red hardwood finish. Although a haberdasher might have questioned his style, no one could have questioned his effect. It was that of a moose, disguised in green breeches and frock-coat, looking for a mate. And if he had used the retina of a woman's eye for a mirror he could not in his artlessness have produced a more thrilling effect upon the heart. The truth was that he had learned from Sylvia that she was herself to take some mysterious part at this festival and he had togged himself accordingly. She did not tell him that never before had the social sheriff of Ruckersville honored him with an invitation, and she was very far from understanding that she owed its attentions. Mrs. Fanning-Rucker had no objection to the girl, provided she did not rebut and marry her son. And since the rumor of Bone's attentions had reached her, she took this method of helping on their convenient courtship.

Still Jim hesitated in the gateway. The sight of Agnes with the women gathered about her disconcerted him. He saw Mildred Percey seated beneath a tent behind a highly decorated table, at which she was selling refreshments. Not near by was the tent itself with the flaps of it discreetly buttoned together; but he could catch no glimpse of Sylvia. He was about to walk back as far as Amy's house and return with her, when Mrs. Fanning-Rucker detached herself from the group around Agnes' chair, waved her hand invitingly and advanced to meet him.

"Oh, Mr. Bone, at last we have got you!" she said by way of greeting.

Jim said nothing. He was not a ladies' man, merely always the lover of one woman.

He literally shook hands, which was his hostess. She thought it was so

As a matter of fact, it was an involuntary expression of ferocious impatience. His one thought was "Where is Sylvia?" and it was with difficulty that he restrained himself from demanding his information.

"Here you have been in the town for nearly four months, turning it upside down; and this is the first time the ladies have had the chance to meet you," she went on, smiling at him.

"You forget Sylvia," he thought, but held his tongue. The fact is, he had his forelegs planted, and was sitting back upon his hindlegs—by the expression of his countenance—like a balking mule. He refused to understand that she was trying to lead him forward.

"Of course not everybody is here. I always reserve the right to be exclusive."

She designed this for a compliment. She dashed it into his face as if she were administering a restorative to a fainting person. It did attract his attention. He looked at her vaguely and wondered what she said.

"One has to be, don't you think?" she added with the air of rubbing his back and patting his flanks.

"Be?" he murmured in his deep raucous voice.

"Yes; I say one has to be exclusive."

Jim looked at her. He had not forgotten Sylvia. He resolved, so help him Heaven, never to forgive it if he had been deceived into coming there except to see Sylvia. But, throwing one arm around that thought to preserve it, with the other he shot a blow into the face of Mrs. Fanning-Rucker—figuratively speaking, of course—which gave her that impression of his ripping sincerity already referred to.

"It's owing entirely to who you are and how steady you can stand on your own pegs," he answered, looking at her with cool precision.

"Delicious!" she gasped, while she managed her smile with the dexterity of an old duelist who receives his opponent's blade upon his own with a clash.

At this moment the flaps of the tent were folded back and the figure of a girl dressed as a gipsy appeared in the opening.

The effect upon Bone was instantaneous and miraculous. If he had fallen upon his knees and kissed her hand Mrs. Fanning-Rucker could not have been more surprised than she was at the sudden metamorphosis of a boor into a barbarian gallant. He fairly cuddled under her wings as they now moved together across the grass. And nothing could have surpassed the wit and good humor with which Mr. Bone conducted himself for the next hour, during which time he met and squeezed the hand of every woman, old and young, upon the lawn. He showed a tender consideration for Agnes by fanning her with his hat brim, after she had endured the shock of being introduced to him. She parted her lips, drew her lids down till they showed only a three-cornered angle of each sad pupil, and could not resist confiding her ailment to him.

"It's my spine. The doctor says it isn't, but I know it is!" she murmured faintly.

He redoubled his efforts with the hat brim and looked distractedly for Tony, as a desperate man looks for some one to rescue him from a frightful danger or a hideous embarrassment. Mr. Adams was nowhere in sight.

"Did you ever have any trouble with your spine, Mr. Bone?" inquired the invalid. She had reached that stage of neurasthenia when a woman centers her whole mind upon her innocent vertebræ.

"Never!" he answered, turning furiously red, as if her question had stripped him stark naked in the presence of the company.

A look of deep disappointment passed over her face, as much as to say that again she had asked for sympathy and received a stone. She closed her eyes. He withdrew gently at this dismissal.

For some minutes he had seen Mildred Percey signaling to him from behind the refreshment table by waving a sheet of notepaper. He understood. It was her triumphant way of letting him know that she had finished another epitaph for the tombstones of the Confederate heroes. Nearly every day now she appeared in his office with two or three of these thin bugling verses. And even more than he feared Agnes' invalidism did he fear Mildred's poetic inspirations. He was beginning to understand them with all the horror a man has when, in love with one woman, he

HOW quickly the average man can tell, when he sees a new season's style, whether it is extreme or bears the mark of good taste!

von Gal made Hats

"Correct Styles for Men"

owe their popularity to the fact that they are the accepted standard of style. And behind that fine style is the best quality you can buy at the price. Your von Gal made Hat represents *full hat value*—a value guaranteed to you. We stand behind the dealer in giving you a binding assurance of satisfaction.

Prices $3, $4 and $5. At your dealer's, or if he cannot supply you, write for Spring and Summer Style Book E, and we will fill your order direct from factory if you indicate style wanted and give hat size, your height, weight and waist measure. Add 25c to cover expressage.

Guaranteed Shirts

Neither the critical dresser nor the economical spender need hesitate in buying shirts when the shirts bear the Emery label.

Each *Emery* shirt at $1.50 up has in it the maker's official Guaranty Bond, with the guarantee of *fit*, *color* and *wear* made definite and specific.

Emery

Emery fabrics get the most rigorous test for color and strength known in the shirt industry. They are guaranteed dependable and long-wearing.

Emery shirts are accurately cut and made. Measurements are guaranteed true to the size markings. "Your size" in *Emery* shirts is always your size.

Emery neckbands are PRE-SHRUNK. They launder without tightening up.

Emery shirts are produced under a system so exacting that each shirt is inspected *seven* times.

As a result, the *Emery* shirt is so perfect that the makers can and *do* take full responsibility for it.

Look for Emery when you buy shirts: because, if a shirt so labeled shows any fault, the *Emery* dealer will replace it with a new shirt.

The True Diagonal Stroke

To sharpen a razor perfectly it must be stropped diagonally—from heel to toe. Kanner's SLYDE-STROKE Stropper is designed on that principle. The blade moves up and down, as the leather is drawn back and forth across its edge. A double action with one operation—a perfect heel to toe stroke. The result is the sharpest, keenest, smoothest cutting edge possible. Better than the most expert barber can produce, and always *the same*. The SLYDE-STROKE Stropper is an absolutely new machine. The only one on the market that gives the true diagonal barber's stroke. Sharpens ordinary razors, and every make of safety blade equally well and quickly. Can't get out of order and cannot cut the strop. Kanner's SLYDE-STROKE Stropper is sold under an absolute money back guarantee. Agents will find the SLYDE-STROKE a wonderful seller. A moment's demonstration—a sale, and on to the next. Profits are enormous. Write for sample outfit and territory now.

Get this Course in Physical Culture

Prepared by Bernarr Macfadden, the Foremost Authority in Health and Body Building

To every person sending us $1.00 for an eight months' trial subscription to the

Physical Culture Magazine

we're trading to give, absolutely without cost, a complete course of lessons in physical culture. These have been written by Mr. Macfadden personally, and represent the most effective body-building course ever compiled and reflect the knowledge gained in the treatment of Patients at his immense Healthatorium, 42nd Street and Grand Boulevard, Chicago.

If we were to market this course for profit, we could not offer it at less than $15.00

We make this unusual offer as an inducement for you to get acquainted with the Physical Culture Magazine—the most needed periodical in the field of literature.

Here is an opportunity to get rid of doctors and medicines. Just enclose $1.00 and say, "Send me your Free Course and enter my name for an eight months' subscription to Physical Culture." We will cheerfully return your money if you are not satisfied.

PHYSICAL CULTURE PUBLISHING CO., 503 Flatiron Bldg., NEW YORK CITY

feels the sentimental tentacles of another closing about him. He thought rapidly, with that double action of the mind that is peculiar to any person in a difficulty. He was resolved upon two things: first, not to approach in the company of any one else the tent where Sylvia was obviously engaged in telling fortunes; second, not to come near the refreshment tent over which Mildred presided, without an adequate guard.

This was more difficult to achieve than it seemed, for the tent was the center of much pleasant excitement. From the tail of his eye he had observed Fanning-Rucker conducting a constant stream of guests in that direction. But Mildred's table was far less popular. He was suddenly blessed with an inspiration, so evasive, so effective, that it would have done credit to a much more socially experienced person.

"Let's all have something!" he exclaimed to his hostess, sweeping out an arm that took in the various groups of guests scattered here and there, and wagging his head significantly at the refreshments.

The saloon vernacular of his invitation did not escape the lady to whom it was addressed. She was amused and delighted at the opportunity to swell the receipts for the U. D. C. fund.

She arose, conducting him here and there from one patch of guests to another, even as far as the row of old peony saints seated in the shade of the veranda.

"Come on, everybody! Mr. Bone is going to treat."

A few minutes later they moved across the lawn in the direction of Mildred's table, Bone stepping along a trifle in advance. He was like the nucleus of a comet, dragging its tail of fluttering, chattering femininity upon the ground. His voice arose, he guffawed, he whipped out compliments right and left so grossly masculine that they surpassed mere flattery. By the time they reached the table with its punch bowl of lemonade, its platters of cakes and decorations of candy boxes, he had "arrived" in Ruckersville, femininely speaking.

It was his purpose to drain the bowl and clear the table of everything except the epitaph. This was the first time the ladies of Ruckersville had ever experienced the thrill of being treated to more than one plate of ice cream by any man. They were not hungry, but they enjoyed the excitement of being the beneficiaries of masculine extravagance, which women are always glad to interpret as complimentary to themselves. The contagion of the gluttonous merriment they created was irresistible, and they were presently joined by the group of men who had till now held economically aloof. Colonel Lark engaged in a mild competition with Mr. Bone by presenting the ladies with the remaining box of candy. No one noticed that every time he took another glass of lemonade Jim invariably and instinctively felt with his booted toes for the foot rail that is fastened along the bottom of every bar, although he caught Mrs. Martin's eye fixed upon him severely and intelligently once when he held his glass up to the light and looked through it, from force of habit, before drinking.

Only a detective, or one of our new practicing psychologists, could have told that he had been making desperate but futile efforts to escape for some time when Tony Adams appeared in the gateway. These efforts became almost frantic when he discovered that he could not outwit the tender thanking intimacy of Mildred's blue eyes.

She had accepted the whole incident as his personal attention to herself. As Tony sauntered leisurely across the lawn, his eye fixed with amused astonishment upon Bone cavorting so noisily in the midst of so many women, he stopped, his face suddenly sobered. Then he started forward again with hasty strides, like a man who has received an inspiration order to hurry. The fact is that over the bobbing, beflowered garden hats of his captors Mr. Bone had sent his friend the "high sign" of distress.

"Tony," he whispered hoarsely as he met that worthy in front of the hedge behind Mildred's table, "corral these old heifers and hold 'em—if you have to lasso every one of 'em—till I get away!"

He disappeared instantly and completely from view. The hedge extended as far as the tent and completely concealed his flight.

(TO BE CONTINUED)

For every cutting edge

The Housewife's kitchen knives—the business man's razors—the mechanic's tools—everything with a cutting edge can be quickly sharpened with some one of the

PIKE SHARPENING STONES

The only line that includes every sharpening substance—natural or artificial—each the best for its sharpening purpose.

THE LAST STAND OF THE BUFFALO

(Continued from Page 18)

There is also in Yellowstone Park a band of wild buffaloes estimated at twenty-five head. They are seen only at intervals in the most inaccessible places. Now and then a calf is roped and added to the captive herd. An effort has been made to entice the wild animals into the corrals, but without success. The only other herd of wild buffaloes on the continent ranges the uninhabited region west of Smith's Landing, on the Athabasca River, in Canada. Any estimate of the herd is the purest conjecture, as it has been preyed upon by wolves and Indians. The American Bison Society places its number at four hundred and fifty. Many believe this estimate to be too large by half.

If the future of the buffalo in the United States is now secure it has been rendered doubly so on broader foundation lines across the Canadian border. Canada made history in the preservation of the buffalo when it purchased the Pablo herd in February, 1907. The price paid was two hundred thousand dollars. The number of buffaloes purchased was six hundred and fourteen. They ranged over fifty square miles in the Flathead reservation in Montana. It took three years to round them all up and deliver them, and the cost to Michel Pablo was forty thousand dollars. The Dominion Government established the great park at Wainwright for their reception. The park is of irregular shape, about twenty miles long by eighteen at its widest point, and contains about one hundred and seven thousand acres. The fence of woven wire surrounding it is nine feet high, seventy-two miles round and cost one thousand dollars a mile. It is paralleled inside and out by plowed fireguards twenty feet broad.

The Last Round-Up

At the time of its purchase the Pablo herd was by far the largest herd of buffaloes ever in captivity. Its rate of growth gives an idea of what may be expected in the great parks of the United States and Canada. Indian hunters on the Milk River captured four buffalo calves in 1873. They gave them to the priests of St. Ignatius Mission, in Montana, who kept them as pets. By 1884 they had increased to eighteen head. Ten were purchased that year by C. A. Allard and Michel Pablo, who were wise enough to realize that in a few years specimens of the almost extinct race would become of great value. In 1893 they purchased thirty more from "Buffalo" Jones, of Garden City, Kansas. When it was sold in 1907, thirty-four years after the capture of the four calves, the herd, which had passed into the sole possession of Pablo, numbered more than six hundred and fifty head. For ten years preceding the sale Pablo had disposed of fifteen or twenty head annually.

The round-up of the Pablo herd after its purchase by Canada was the last great buffalo hunt of history—a hunt without guns, but as thrilling as any buffalo hunt of early days. Two hundred cowboys and Indians led by Pablo himself and his Indian wife, a daredevil rider, scoured the range constantly. The buffaloes were accustomed to the daily sight of horsemen and at first it was possible to drive them, the cowboys nursing them along gently and being careful not to frighten or stampede them. They were driven a few at a time into a large corral on Pablo's ranch until a sufficient number for shipment had been collected. Then in bunches of seventy-five, hedged in by as many cowboys, they were driven twenty-eight miles to Ravalli, on the Northern Pacific Railroad, where they were crated and shipped to Canada.

Continual hunting, however, made the buffaloes so wild that it became impossible to drive them. Then the indomitable old half-breed decided to construct a big corral in the heart of the range, with fanlike fences spreading out from it. The site selected was a strip of land eight hundred acres in extent inclosed in a sweeping horseshoe curve by the Flathead River. Across the river a long open draw or coulée led away into the hills to one of the favorite feeding grounds of the herd. From the entrance to the corral booms were swung across the river, serving the purpose of waterfences. At the sides of the coulée fences were built, one eight miles long, the

MICHIGAN "40"—$1,500

What You Get

After you've listened to all the big talk of automobile manufacturers—after all is said and done—what interests you most when you select a car is *what you get.* We claim—and we can prove it—that in the **Michigan 40** "Michigan Forty" at $1,500 you get more real value than you can obtain in any other car on earth. Figure it out. Here are the specifications. Compare them with those of any car at *anywhere near* the price.

What You Get

Motor—40 horsepower. Four cylinders, 4¼ x 5¼ inches. Three-bearing crankshaft. Enclosed valves.

Self-starter—absolutely efficient. Light in weight. Non-injurious to motor.

Dual ignition. Briggs guaranteed magneto.

Three-speed selective transmission.

Three-quarter floating rear axle, possessing all the advantages of both full-floating and semi-floating types with none of the disadvantages of either.

Multiple disc dry plate clutch.

Frame—extra strong, 5-32-inch steel. Four inches deep, 3½-inch flange.

Shortsville wheels, 34 x 4-inch tires and demountable rims—just to make sure that MICHIGAN owners will not be bothered with that bugbear of motordom, tire trouble.

Fourteen-inch brake drums. One square inch of braking surface to every eight pounds.

White nickel mountings throughout.

116-inch wheel base, long 50-inch springs, and luxuriously comfortable cushions insure perfect riding qualities.

A life guarantee on every MICHIGAN car—backed up by an old-established concern.

Why We Undersell

In 1909 we started to build automobiles. Twenty-eight years of pleasure-vehicle experience had paved the way. And when we commenced to turn out motor cars, our 10,000 vehicle agents throughout the country were *ready* to absorb the new product.

Thus for distribution, which costs other manufacturers fortunes, we paid not one cent. And that is why we undersell.

SELF CLEANING

LITHOLIN

COLLARS & CUFFS

Your Laundry

When it comes back all chewed up you lose both ways—the linen is useless, and in addition, you have the wash bill to pay.

Settle this question right *now*. Buy a **LITHOLIN** COLLAR and begin to live—look the part, the rest will be easy.

A **LITHOLIN** COLLAR, 25 cents, (worn every day) lasts two months, and a daily rub with a damp cloth is your laundry bill. **LITHOLIN** COLLARS and CUFFS are made in the fashionable shapes—dust and water proof—have that popular *dull linen finish* so seldom found in water-proof collars—turndowns have a "slip-easy" space for the tie.

IMPORTANT TO THE TRADE

The new **Litholin** packing is two dozen collars to the box—each box containing assorted sizes, 14 to 17½, the popular sizes predominating. The great advantage of this to both jobber and retailer is fully explained in our Selling and Distributing plan—write for it to-day. The old style packing will also be continued.

We also make a *two for a quarter* collar—particulars to the trade on request.

Buy a LITHOLIN Collar to-day and be convinced

COLLARS 25 CTS. CUFFS 50 CTS.

If not at your dealer's, send, giving style, size and number of collars wanted, with remittance, and we will mail postpaid. Booklet of styles free on request.

Otto Gasoline Engines and Pumps

are made for constant use, everywhere, for all sorts of work. This cut shows type widely used for home water supply, water works systems, and elevated tank service. The engine can also be used to drive your machinery and run dynamo for electric lighting. We mount all styles pumps, hoists and air compressors on portable steel trucks. Otto engines furnish dependable, instant power for high pressure fire service, and for irrigation water supply. There's a saving in fuel of 75% over steam power. We will give you some convincing figures if you tell us your needs. All sizes up to 120 H. P. Run on city or natural gas, producer gas and distillate.

Send for Bulletin No. 30 to-day.

The Otto Gas Engine Works, 8301 Walnut Street Philadelphia, Pa.

other six. From the point at which the ravine opened out into the buffalo pasture these fences were continued, flaring out into the hills like a gigantic fan. The fences were of the most substantial kind, to withstand a possible stampede of the buffaloes. They were of strong meshwire twelve feet high, and the posts, twelve inches in diameter, were sunk four feet in the earth. Wire and posts had to be hauled thirty miles across the mountains. Work on the corrals and wing fences was begun in August and was not finished until late in October.

Pablo had shown himself a master strategist. The corral on one side of the river and the great wings spreading out from it on the other formed a cunning trap. Pablo knew that when the lines of cowboys began to close in on the buffaloes the animals first would rush pellmell for the mountains, but, finding escape cut off in that direction, would charge for the river in the hope that across its swift current they might find safety.

When all finally was ready for the drive the army of cowboys rode out into the mountains. They beat up every lonely valley, every thicket and timbered gulch, frightening the stragglers toward the main pasture. They came at last to a wide plain. On the other side the fenced coulée opened its wire jaws. Between, a herd of five hundred buffaloes pastured.

One night the cowboys bivouacked, each man sleeping in his blanket just outside the sweep of his pony's picket rope, while sentinels kept watch. With dawn reddening the east they were in the saddle and closing in upon the buffaloes in a far-flung semicircle. The buffaloes scented danger in the wind. Then they caught sight of the long, thin lines of stalkers slowly hemming them in. Panic seized them. They rushed into a compact mass and stood facing the hunters, the bulls lifting their great lionlike heads high in air, while their hollow bellowings, like the deep brool of lions, boomed across the sagebrush. An old cow suddenly turned tail and shouldered her way to the rear. Old cows are the herd leaders among the buffaloes, and the herd, following her as sheep follow a bellwether, dashed away toward the river—toward the yawning mouth of that long avenue between wire fences that led to the trap across the stream; and digging their rowels into their horses' flanks the cowboys on flank and rear charged after the herd.

The Flight of a Big Herd

For miles across the plains the buffaloes fled. The end post of one of the fences rose directly in their path. They swerved in their course to avoid it—swerved toward the outside. The flanking cowboys were ready for such a move. They spurred their horses across the front of the buffaloes to turn them back. They shouted at the top of leather lungs, they waved their sombreros, they fired their six-shooters in the air; but now the buffaloes were crazed with terror and were not to be moved or swerved by such tomfoolery. On the mad brutes plunged, the hind ranks crowding the leaders forward, turning not a hair's breadth for anything, ready to crush horse and rider beneath their sharp hoofs; but the end post and the fence behind it did not give, and that black wave of furious life split upon it like a sea wave on a rock. Two-thirds of the beasts bore to the outside and, rushing through the ranks of the cowboys, escaped to the mountains. The remainder turned glancingly along the inside of the barrier; and the horsemen, hanging hard upon their traces, chased them through the long coulée clear to the Flathead.

Never pausing in their flight the buffaloes plunged into the swift current, swam across and dashed into the corral. Instantly the gates closed upon them and they were prisoners. One hundred and seventeen had been trapped.

Tired cowboys, trooping in from the chase, laughed and slapped each other on the back as they saw their shaggy captives safe behind the tall wire fences. "It was a good day's work," they said. "We'll get the rest tomorrow."

So the night came down and the cowboys rolled themselves in their blankets and went to sleep; but the buffaloes did not sleep. It was far into the night and the moon was up when a cowboy sat up in bed and saw them stirring restlessly about the corral. He blinked at them casually, thought nothing of their actions, snuggled down in his covers and went to sleep again.

Pilot "INSTANTO" LIGHTING SYSTEMS

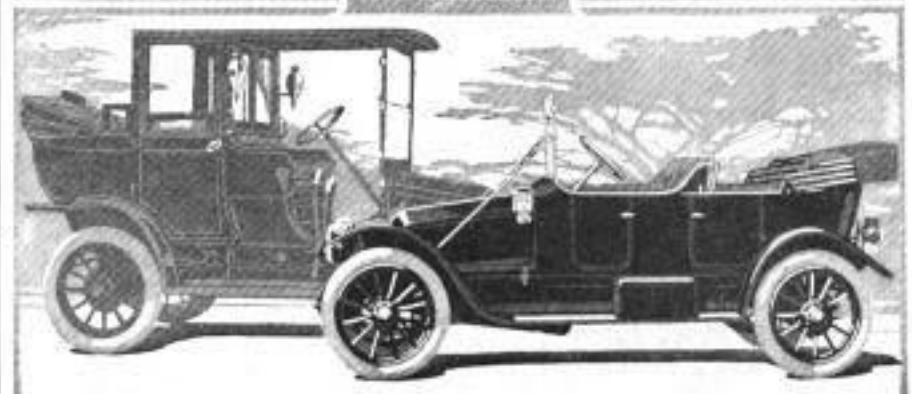
Along one side of the corral a cut clay-bank rose almost perpendicularly to a height of one hundred and seventy-five feet. No fence had been built along it because it was thought impossible for man or beast to scale the precipice; but it was the single defect in an otherwise perfectly good corral—the one loose stone in the prison wall; the one chink in old Pablo's armor—and the buffaloes found it that first night of their captivity.

In that steep bank the animals sensed their one desperate chance. They began to rush up it tentatively, climbing a little way, only to slip or fall back. That many fell was evident next morning in the scores of little trails that ended only a few feet above the corral with the marks of slipping hoofs or small landslides; but the buffaloes persevered. They kept pounding away at the bank through the night watches until they had worn a narrow track that angled steeply up across the face of the cliff. Up this precarious and dizzy trail they single-filed at last, passed over the top and galloped off to freedom.

When morning came the cowboys rose and looked into the corral for the buffaloes and rubbed their eyes and looked again. They were dumfounded to find it empty except for a solitary bull that had broken its leg. Then they swarmed into the inclosure to investigate and found the path by which the buffaloes had achieved their wonderful jail delivery. Only by going on their hands and knees were the men able to climb the trail by which the animals had gained their liberty.

After the escape of the buffaloes another effort was made to corral them; but again they broke through the line of beaters. Then a heavy storm left plains and mountains deep with snow, and the hunt was abandoned until the next spring.

So the discouraging but tireless hunt went on. Danger there was in plenty for the hunters. Once a maddened bull, plunging his horns into a horse's side, lifted horse and rider upon his giant front and bore them a hundred yards before the horse slipped off to the earth dead, pinning the man beneath him. The bull backed off to charge; but, before he could kill the man, other cowboys spurred to the rescue and brought him down with a fusillade from their six-shooters.



Montana Spoils the Game

By repeated failures Pablo found that his fanlike fences were not long enough. At great expense he extended them twelve and fourteen miles into the hills. At last most of the buffaloes were corralled. No attempt was made now to drive them to Ravalli. Crated at the corral, they were hauled thirty-five miles on wagons to the railroad. Eighty four-horse teams were employed. The first shipment to Canada was made in June, 1908; the last in May, 1911.

Forty or fifty buffaloes, led by determined old bulls, having defied all efforts to capture them, are still left upon the Flathead range. Last spring's calves brought their number up to about eighty. Pablo proposed to organize a big hunt to kill the animals. His plan was to assess each hunter two hundred and fifty dollars, less than Canada had paid him for each buffalo. He was inundated with applications to take part in the hunt from big-game hunters all over the world. When all arrangements were complete the state of Montana stepped in and spoiled the game. If Pablo could not capture them, declared the authorities, the state was warranted in assuming that they were wild buffaloes, and as such entitled to protection under the game laws. So the matter rests. Meantime the buffaloes are enjoying life and liberty on their old range.

Upon their arrival in Canada the Pablo buffaloes were kept temporarily in Elk Island Park until the park at Wainwright was completed. They were transferred to the Wainwright range in June, 1909. Seventy-seven buffaloes from the overstocked park at Banff and thirty purchased from the Conrad herd in Montana also were shipped to Wainwright. This gave Wainwright Park a herd of seven hundred and twenty-one to begin with. In the spring of 1910 there were one hundred and ten calves and in the spring of 1911 there were two hundred. So the herd now totals ten hundred and thirty-one. There are now three hundred breeding cows in the herd. These figures were obtained in October, 1911, from Mr. Edward Ellis, superintendent of Wainwright Park.

A DOLLAR DOWN AND A DOLLAR A MINUTE

(Concluded from Page 22)

rge and growing list of regular custom- and hasn't time to fool with anybody ready to do business with reasonable patch. He is quick-spoken, a happy ker, expert in books and literature and ll informed on general topics. He spe- lizes usually in the publications of one possibly two subscription publishers ose kind of books fit his particular trade; t he is ready to supply his customers h everything they may want from any blishing house in creation.

He is, in short, the traveling bookstore. is a modern institution growing out of extremely modern need. His customers chiefly men too immersed in business— d women too occupied in family or social charitable or club affairs—to take the ne necessary for finding the books, which nevertheless necessary to them. Their ok agent studies them and their needs d is able to get at once to the point with m. Each subscription set, as it comes t, he mentally apportions to Mr. Ex and s. Zee, according to their known tastes; d he does not waste their time or his en they meet. He is also up on current oks and is able to inform his customer of ny bookish things of which the customer s heard something and wants to know re. Whether the meeting is of his own king or his customer's, he rarely—if is skillful—leaves the office or the use without a sale; and sometimes he ries with him a bunch of miscellaneous nmissions besides.

As I have said, this most useful book nt, this—*mirabile dictu!*—welcome book ent, is the product of a need. This need in turn, the product of a complex and althy age. And, in turn, the phenom- al growth of our complexity and wealth bearing a steadily increasing harvest for e fast-growing ranks of the agents. A lly good agent, by the way, can make ir or five thousand dollars a year. The jority probably net from two to four ousand, and here and there an excep- nal man nears six thousand. Women e not successful in this field so far, proba- y for the reason that success depends on creating a reputation as an expert, d women, though they may be experts, ll find the reputation difficult to attain. These agents are found, of course, mostly the centers of wealth. New York has any of them, but not many more than icago. Today they are found in every y of the first or second and sometimes en of the third magnitude. From these nters they extend their operations roughout the suburbs and to neighboring wns. Some have developed business in -separated centers and spend much of eir time on trains. Others favor all untry routes. Many do a good deal of siness by mail, only visiting their dis- ntly separated customers once or twice ear to keep in touch with them.

Money in Standard Authors

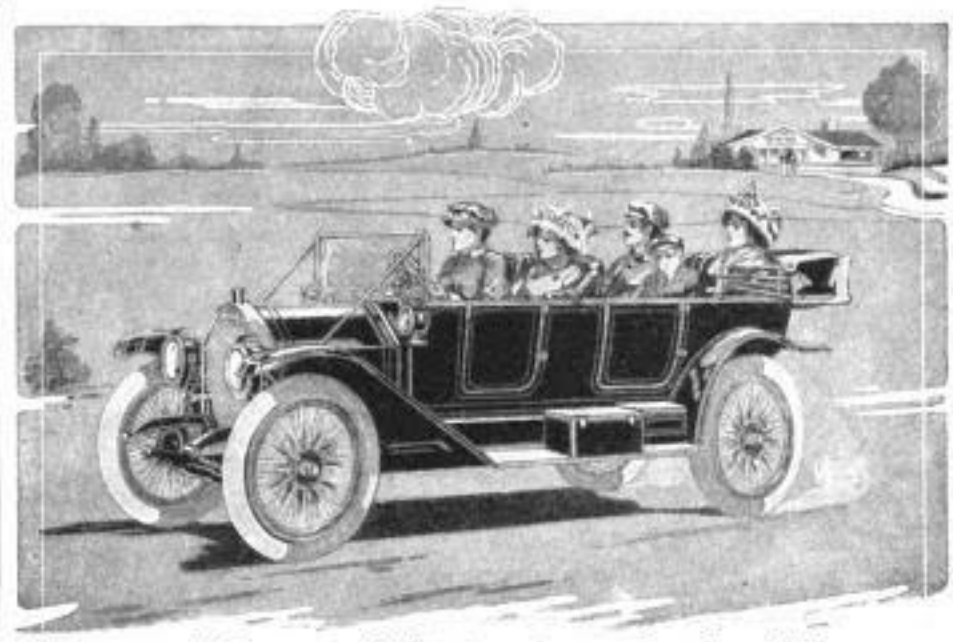
Thus, in one way or another, the country pretty well taken care of by the inde- ndent book merchants, and it remains th the publisher to establish and main- in relations—not with the public, but th the book agents. This he does by nstant correspondence. It is also to the terest of every book agent who deals with good class of personal customers to keep good standing with the publishers who sue their kind of high-standard sets.

Eventually, by a process of natural selec- on, each agent settles down chiefly to one blisher; but there is no contract or bind- g relation either way. The publisher sumes little risk, dealing in this way rough long-tried agents. And he is under necessity to advertise—though he often es advertise with the hope of provoking e customers of other publishers' agents to k to see his sets. Sales are made from a mple copy or dummy; and the pur- aser's standing, if credit is required, is oked up through the usual commercial gencies before any considerable risk is sumed. Yes; it is a safe and comfortable siness.

And then there is the occasional limited lition. This often helps out well. On tting out a new set to be sold at two dol- rs a volume, for instance, the publisher sometimes will first print from the same plates a special edition of a hundred and fifty or two hundred sets on fine, hand-made paper, and have each volume specially bound and a little more freely illustrated. Perhaps he will insert in the first volume an introduction by some celebrity, or get the author to give up a few days to writing his autograph in all the volumes. This edition, which really will cost less than a dollar more a volume than the regular subscription edition, he will sell for five or six or seven dollars to a discriminating body of collectors; and will make enough, perhaps, to pay for the plates of the whole edition.

This pretty business in copyrighted sets, however, is as an apple in its barrel to the great bulk of what many call the regular subscription business, the adjective in this case indicating merely size. The "main stream" of the business would be more nearly descriptive. One of the publishers in this regular business built up a selling machine of wonderful size and complexity. He divided the United States into departments under able salaried heads, and subdivided these again under commission agents, until there was no village where his sets were not offered. He published sets of all standard authors which no longer required royalty payments; and so effective was his machine that it was said that editions of a hundred thousand sets were not uncommon on his presses.

Where Competition is Still Keen



Of course, under the old conditions, operating through general agents, whether commissioned or salaried—and with all the expensive machinery of a great, continent-wide business mechanism—lower costs and higher returns must be the rule. And yet, at that, with the help of long press runs, no royalties and the saving of the printer's profit, good, serviceable library sets can be marketed at fair subscription prices.

There are hundreds of businesses of this kind in the country now, and many of them are highly prosperous. There has developed, out of the vast size of the country, a system of interchanging selling facilities among houses far separated, which has proved exceedingly effective. It is known as the general agency system, and does away with the need of each house covering the same territory with its own expensive business machinery.

There are very many of these businesses which, for all their working together, are nevertheless keenly competitive; and this competition, added to the swift growth of public discrimination, has served to clarify and very considerably purify a vast business which, in earlier years, sadly needed the process that the last decade and a half has applied. In this connection, one publisher of long experience said to me the other day:

"The whole fact of the matter is that, up to ten years ago, they'd buy anything. I'm not exaggerating—anything at all! It was too easy. Now, however, if you want to make money you've got to give bigger value than anybody else—and at skin-tight prices at that. Yes, sir; it's getting to be a harder game every year. At the same time the market is getting bigger."

This class of business necessarily constitutes the bulk of the so-called subscription-book trade. There are hosts of these publishers, big and little. Some of them are in the business for many years; others enter spectacularly, overrun themselves in a few ill-advised seasons and disappear. It is an easy business to get into, for you can hire plates if you want to at no great cost. Many printers own plates of the standard sets, having either taken them over from some meteoric publisher who left them on their hands when his light went out, or made them for themselves in slack times. There really is no business easier to get into—which is one reason why so many rush into it and drop out again. In short, it is the same old story. There is as sound, profitable business in subscription publishing as in trade publishing—for publishers, but not for amateurs, bunglers, experimenters and speculators. The same is true of every other business, from restauranting to bond-selling.

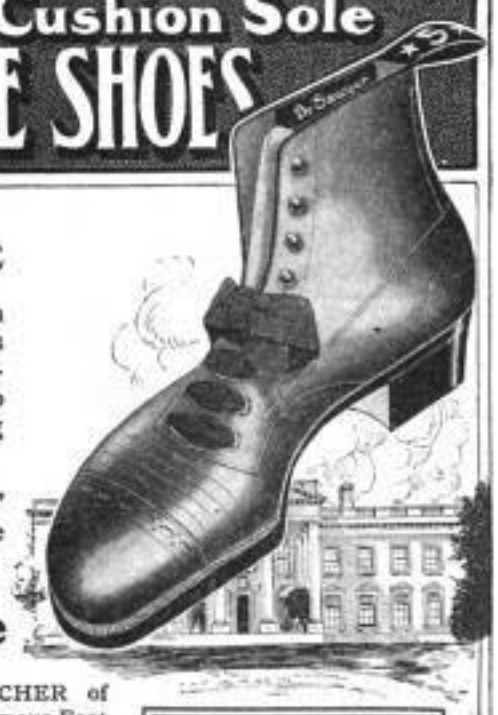
We could cut $500 out of the Haynes and no one but an expert would know it

THAT doesn't mean it couldn't be found out *later on*. For it would be, and "later on" is not a good time to find out things about the car you buy. Find out *before* you buy.

It's a *fact*, we could cut the heart right out of the Haynes and few men could tell it by *looking* at the car. It might still be just as big and handsome. But it wouldn't have the *stuff* in it—the materials and the workmanship. It would not represent what we consider *necessary efficiency* in an automobile.

There is nothing simpler than to *cheapen* a car. Take fifty dollars off here, twenty-five there, forty somewhere else, and so on in a dozen ways and places. Easy enough to buy inferior materials, rush the workmanship, cut out the days and days of testing, and let the body go through with six or seven coats of finishing instead of *eighteen*.

But to build a car that way wouldn't be the Haynes way, and such a car wouldn't be a Haynes car. The Haynes 5-passenger touring car Model 21, fully equipped, sells for $2100, and it's worth every dollar of the price.



The Haynes 1912 Line is worth seeing, worth studying. A wide choice of bodies on our two standard 1912 chasses, Model 21, 40 horse power, 4½ x 5½ inch motor, 120 inch wheel base, 36 x 4 inch tires, and Model Y, 50-60 horse power, 5 x 5½ inch motor, 127½ inch wheel base, 37 x 5 inch tires.

If you do not know the Haynes dealer nearest you, write us today for 1912 catalogue.

They Won't Slip

CAT'S PAW

CUSHION

RUBBER HEELS

50¢ Attached All Dealers

After All Is Said and Done,
The Question Is—TO SLIP OR NOT TO SLIP.

Over 65% of Rubber Heels sold in 18 of the largest cities of the United States are Cat's Paw Cushion Rubber Heels.

You will prefer them, too, because of the Friction Plug—a patented feature—which positively prevents slipping, and makes them wear longer. Hence, the most economical heel to buy.

Then again, the extra quality rubber affords greater resiliency—and there are no holes in the heels to track mud into the house.

To the Retail Trade

It pays to give the public what they want.

The majority want Cat's Paw Cushion Rubber Heels.

Order from your jobber today.

Insist upon Cat's Paw Cushion Rubber Heels of your dealer. **The name is easy to remember,** and they cost no more than the ordinary kind.

If you will send us the name of your shoe dealer we will mail you a Cat's Paw Bangle Pin free.

RETAILING THE WOODEN NUTMEG

(Concluded from Page 15)

ninety-eight cents. The concern offering this attractive bait asserted that it was closing out goods that had been caught in the collapse of a condemned building in New York. Local business men found that no firm of the name given had ever done business in New York. A representative was sent to purchase one of the ninety-eight-cent all-wool suits and got one that was all cotton.

The case was taken into court, but the outcome gave an excellent illustration of the difficulties met in stopping such frauds; for, though the evidence proved there had been cheating, the defendants got clear on a technicality, it being held that, as the charge had been made by a business man who merely sent a representative to purchase, he could not have been cheated by proxy. Publicity drove that dishonest concern out of town, however, and the business men interested in dealing with such cases got some useful experience.

Damaged and rejected merchandise from the clothing, furnishing and cloak trades is sold to these bankrupt-sale stores by auction. Shoddy goods are also manufactured especially for that class of demand. A clothing man went through a sweatshop, where men's suits of the flimsiest cloth were being put together so fast that stitches were half an inch long. He suggested that they would not wear. The proprietor, who has made a fortune out of such junk, was astonished.

"Wear!" he exclaimed. "Heavens! We don't make 'em to wear—we make 'em to sell!"

Little Business is highly adaptable. On one hand there will be the chain of fake fur stores doing business in a dozen cities, all owned and managed by some gentleman who has grown rich and skillful in the traffic. At the other end of the scale comes the imitation farmer, selling potatoes at short measure from a green farm wagon, with mud on his boots and hayseed in his hair, as an after consequence of newspaper discussion of the cost of living. He is merely a huckster dressed in farm garb, and he buys his potatoes from a commission house.

Remedies for Crooked Ways

Little Business follows the demand, invades any trade that will yield dupes and profits, and probably nine times in ten gets away with it. There is always the same highly colored appeal to the imagination—the same story of goods obtained through obscure channels and the same old elimination of mysterious middlemen's profits. If necessary the faker will take his victim aside and tell him that the goods have been smuggled or stolen. Add the cupidity of customers who know little about real values and nothing about trade channels, and the trick is done.

As a parasitic activity, Little Business, taken as a whole, must impose losses on the public second only to those of swindling stock enterprises. The stealings are chiefly from hard-working people buying necessities.

The handiest remedy seems to lie in trade organizations. Laws against fraud and untruthful advertising are already on the statute-books in many states, but little effort has been made to enforce them. It has been nobody's business. In some mercantile lines, indeed, certain frauds have existed so long that the regular trade has almost come to regard them as legitimate—or, at least, as something not to be interfered with so long as people are silly enough to be taken in by such schemes. In other trades, misbranding and misrepresentation have become part of the regular trade itself, so far as giving fair value under a high-sounding tradename is concerned; and the trade hesitates to begin housecleaning, because it knows the work would necessarily start right at home. The extent of crooked Little Business is now so great, however, and the harm done to honest houses is becoming so clear, that the business world is taking a new view of the evil; and its suppression and exposure are coming to be looked upon as part of the general organization of merchants and manufacturers in every line of business for the bringing about of better business conditions.

Williams'

Holder Top Shaving Stick

THE newest form of the famous Williams' Shaving Stick. The stick is fastened firmly in the nickeled cap, which, when not in use, forms the top of the nickeled box in which the stick is carried.

When in use, this "Holder Top" makes it possible to grasp the stick firmly until the last fraction is used. And the fingers need never come in contact with the soap.

The "Holder Top" Stick furnishes the same delightfully soothing and refreshing lather that has given Williams' Shaving Stick, in the familiar Hinged-Cover, Nickeled Box, its world-wide reputation.

The familiar hinged-cover nickeled box

Williams' Shaving Powder

For those who prefer their shaving soap in powdered form it answers every requirement of the most exacting shaver. A little powder shaken on a wet brush produces, with a minimum of time and effort, a rich, thick, creamy lather. In a twinkling your face is ready for the razor. The non-leaking, hinged-cover box, opening with a snap of the thumb, closing with the pressure of a finger, is the acme of convenience.

Note the convenient sanitary hinged-cover nickeled box

No-Rim-Cut Tires—10% Oversize Touch the Million Mark

This month we celebrate. A million Goodyear Auto Tires have now gone into use.

Over half that million have been sold within the past 12 months. Yet this is our 13th year.

Think what that means. More sold in this last year alone than in 12 years put together.

Just because No-Rim-Cut tires—our patented type—suddenly became the sensation.

A few men proved them out. Then thousands proved them—then tens of thousands more.

Now a million tires. Now a trebled demand over last year. Now a larger sale than any other tire commands.

All this occurs after these tires have been tested on some 200,000 cars.

The Reign of the New-Type Tire

Now comes the reign of a new-type tire—a tire that cuts tire bills in two.

A tire that can't rim-cut—an oversize tire, to save the blowouts due to overloading.

A bookless tire—one that needs no tire bolts, nor hooking to the rim.

And a tire which embodies the final results of our 13 years spent in perfecting tires.

All these features combined in a tire which costs no more than other standard tires.

That will explain this overwhelming demand for Goodyear No-Rim-Cut tires.

Old-Type Tires Must Go

Old-type tires—clincher tires—rim-cut when partly deflated. When they run flat, because of a puncture, a minute's time may wreck them.

Statistics show that 23% of all ruined clincher tires have been rim-cut.

Now comes a type which makes rim-cutting impossible. And all of you motorists are sometime bound to adopt them.

These same tires—No-Rim-Cut tires—are made 10% oversize. The hookless base permits that.

That means 10% more air—10% greater carrying capacity—without any extra cost.

It means support for your extras, and for passengers who overweigh. It reduces the danger of blow-outs.

That 10% oversize, under average conditions, adds 25% to the tire mileage.

All those advantages at the price of tires which lack them. How long will any man cling, in your estimation, to old-type, skimpy tires?

The Secret

The secret of this new-type tire lies in three flat bands of 126 braided wires.

These braided wires are vulcanized into the tire base. Thus the tire base is made unstretchable.

This tire needs no beads to hook into the rim flange, because nothing can force the tire over the flange.

But, unlock the flange and the tire slips off like any quick-detachable tire. It slips off much easier, because no beads can get "frozen" into the rim flange.

With this hookless tire, your removable rim flanges are slipped to the opposite sides. Then they curve outward instead of inward.

Instead of a curved flange digging into the tire there is a rounded edge on which the tire rests if deflated.

There is no changing of rims if your rims are standard. Nearly all rims are now made to fit these tires.

We Control It

This braided wire feature forms the only way to make a practical tire of this type. The reasons are explained in our Tire Book.

Competition, of course, has forced other makers to attempt this hookless tire. But the essential feature is controlled by our patents. And substitute features have proved unsatisfactory. Many have been abandoned.

This new-type tire, if you want it right means the Goodyear No-Rim-Cut tire. That is why the demand, in a flood-like way, has centered on this tire.

Get the proved-out tire when you get this type. Get the tire which outsells all the rest after a million have gone into use.

Our 1912 Tire Book—based on 13 years spent in tire-making—is filled with facts you should know. Ask us to mail it to you.

TRUST FALLACIES DISPELLED

Senator Clapp Discusses Efficiency and Dynamic Power

By Henry Beach Needham

ILLUSTRATED BY HERBERT JOHNSON

A STANDPATTER, so 'tis said, is a man who has stopped and can't get started; an Insurgent, a man who has got started and can't stop! Applying this test to Senator Clapp we move that line two be amended to read: A man who has got started and can't be stopped! Moses E. Clapp is six feet two inches tall and weighs two hundred and fifteen pounds, which are mostly muscle, bone and hard common-sense. It would take a mighty able man to stop the senator from Minnesota. He is the least emotional of the Republican Progressives. He isn't a word-painter; and when he speaks in the Senate, which he does not do too often, he talks to the point—and concludes when he reaches it.

In seeking an estimate of a public man at the Capitol, one turns first to the Congressional Directory, for in the statesman's autobiography there is usually an index to his vanities. We learn from the piece contributed by the Speaker of the House of Representatives, for example, that he loves to dwell on the historical fact that "for twenty-two years [he] held the record for being the youngest college president in the United States." For almost a quarter century, therefore, Champ Clark could lay claim to the novice record in pedagogy.

Nothing so deftly contrived to stir the imagination is to be found in Senator Clapp's autobiography. A common-school education in Indiana and Wisconsin, a graduate of the Wisconsin Law School, attorney-general of Minnesota for six years and three elections to the United States Senate—that's about all. If one tries to fill in the sketch the Senator proves to be the most unsatisfactory subject of inquiry in or near Congress.

No Rest for the Weary When Clapp Goes Ajunketing

HE BECAME the state's official lawyer when Minnesota's first rate law went into effect, and he fought in the courts to uphold that statute. After he retired he was retained by the railroad and warehouse commission as chief counsel. So, for ten years before he came to Washington, he was the people's lawyer. Upon his election to the United States Senate he was named a member of the Interstate Commerce Committee; and in 1906, when the Hepburn Bill was received from the House, with Senator Dolliver he voted to report it, though Aldrich, Elkins and the other Republicans of the committee urged adverse action. The fight for railroad rate legislation on the floor of the Senate was led by Clapp and Dolliver, and to their credit was the victory. Ever since that time Senator Clapp has been a militant Progressive. He voted against the tariff bill of 1909 as a matter of course, and in a public address expressed regret that he could not "fitly characterize" the Payne-Aldrich law—"because there are ladies and gentlemen present." In his private conversation full justice is done.

His attitude toward the public business was shown in an investigation of the Indians of Wisconsin, conducted in the fall of 1909 by the Committee on Indian Affairs, of which he was then chairman—being known to the wards of the nation as Chief White Vest. Such investigations are popularly termed "junkets"; but this particular junket was far from being a lazy, carefree vacation jaunt, with all the comforts of home and many of the luxuries of the idle rich. If there is doubt on this point ask Norris Brown, senator from Nebraska, who escaped being labeled an Insurgent by so narrow a margin that it makes his regular teeth chatter to think of it now. On the trip Senator Brown was continually begging Senator Clapp for a spell of rest. He had a family dependent on him—to say nothing of a dwindling constituency—and he owed it to others, he insisted, to conserve his natural resources. Senator Clapp, however, knew no pity.

The Pros of the Promoter and the Cons of the Consumer

ONE chill autumn night, when the private car was cozily sidetracked in a dead little town, Senator Brown was rudely awakened by the suffocating odor of smoke. For once in his official life he sprang from his berth and discovered that the roller caravansary was afire! In deference to the chairman of the committee he awakened Senator Clapp—and let "Mose" put out the fire. The danger averted, Senator Clapp said to Senator Brown: "Get everybody up! There's no sense going back to bed—it's too near breakfast-time." It was three-thirty A. M.

Two nights later some witnesses, who had been summoned by telegraph from a town twenty miles distant, and who had been detained by bad roads, pounded on the door of the car. The hour was long past midnight. Senator Clapp put on his trousers, an overcoat and a black "campaign" hat, routed a majority of the senators out of bed—there being no fire under his berth, Norris Brown refused to stir—reconvened the committee, and swore the witnesses to "tell the truth, the whole truth, and nothing but the truth!"—which they must have done under circumstances as funereal as a drumhead court-martial.

In the same way Senator Clapp now conducts the business of the Interstate Commerce Committee, of which he became chairman in the present Congress by virtue of seniority. He is not content when members of his important committee have been duly notified of the hour of the trust hearings. He takes a truant member gently but firmly by the arm, leads him out of the Senate chamber, and personally conducts the senator to the room where cures for the trust evils are daily advertised. The only member who is nimble enough to elude the chairman is the junior senator from Massachusetts.

"Put into your report," said Senator Clapp to the official stenographer, "that Senator Crane flitted in and out today." Next morning Murray Crane was in his seat at the hour the committee began its hearings.

Senator Clapp has given ear to about one million words of testimony on the trust question. He has interrogated witness after witness in a desire to get at the truth. He knows by heart the pros of the promoter and the cons of the consumer. And out of the fullness of his knowledge he gave me the following interview:

"Lack of correct information is of two kinds," said Senator Clapp—"negative, or the absence of knowledge; affirmative, or the presence of an erroneous belief. The latter,

Digitized by Google

of course, is the more dangerous, because every effort to correct a situation from the standpoint of erroneous belief becomes more deeply involved in error. These reflections are suggested by what has come out before the Interstate Commerce Committee of the Senate in the pending hearings upon the trust problem. With the notable exception of Mr. Louis D. Brandeis, and perhaps one or two others, almost every discussion of the question has, it seems to me, involved certain fallacies, which fallacies ought to be dispelled before attempting to solve the problem.

"These fallacies are: first, that vast combinations are essential to the development of efficiency; second, that vast combinations are necessary as a medium for the dynamic power, as it is termed, of American activities; and third, that today we face the alternative of a continuation of vast combination or a return to so-called 'ruinous' competition.

"The claim that vast combination is essential to efficiency is based upon the assertion that a great combination can avail itself of economies; that it develops an *esprit de corps* and is able to spend money upon experimental work.

"It would be easy to refute this general claim with the history of the failure of those trusts which were unable to secure a monopoly, and of the partially successful competition of independent concerns against the efforts of other trusts which, though the latter did not have a monopoly as to all lines of their production, were able practically to monopolize as to some important lines of their production, because they were powerful enough to dictate to the consumers of such production as to whom they should purchase from. However, in this interview, for obvious reasons, I shall not deal with individual illustrations, as I prefer to rest the argument upon certain principles that I believe will be universally recognized as discussed.

"Human nature is governed by general laws. It is true there is always an element prone to reverence power; so it may be conceded that a certain element associated with a great combination may feel a certain pride in the bigness of the employer. Yet it is doubtful whether this is real loyalty of interest so much as it is a pride of importance; in fact, it applies to those who place importance first.

"Let us analyze the counterforce. The public does not love the great combination. There must be a cause for this. The cause is found in the fact of a knowledge on the part of the public of the vast power of the combination and a belief, based upon human experience and a knowledge of human nature, that such power is always liable to be used in an unfair way, even though the individual units which compose the public may not be able to trace an application of such misuse of power to themselves.

"How much more certain it is, then, that those associated with a great combination, recognizing this power and this tendency of human nature to misuse power, believe that in some way it is being misused to the detriment of those to whom such misuse can be directly applied and by whom it can be personally recognized.

"The fact that those who are associated with great combinations share in the general public feeling toward such combinations is based upon the same principle in both cases—namely, a knowledge of the existence of a great power and the proneness of those having power to use it for their own gain; and, though some of those thus associated may feel a certain pride akin to a sense of importance in the fact that they are attached to something big, that there should be any real loyalty is foreign to human nature.

"Genuine loyalty depends more upon the personal equation, which, as a universal rule, is lessened in proportion as the size of the corporation is increased. That the efficiency resulting from an *esprit de corps* is increased in proportion to the increased size of the employing corporation runs counter to human nature; that it is lessened in such case is natural, and serves to account in part for the failure of those trusts which were unable to meet the competition of the independents, and could not monopolize all or a part of their products, as has already been stated. Where an employee considers at all the relation between himself and his employer it is not true that he is inspired with a sense of coördinate interest in proportion to the power of the employer; but, recognizing the power and believing it is used against him and in favor of those possessing it, the very reverse is the effect. Those who do not recognize this fact are blind to the operations of a natural law.

"Aside from the counterbalancing of forces, it is said that a great combination can more freely spend money for experimental work. That it can spend more money than a smaller concern is true; but does it do so as a matter of fact? Necessity is said to be the 'mother of invention.' Competition is the motive power of development. Combination lessens competition; and as it lessens competition it lessens the incentive born of competition.

"The testimony of the inventor is that his invention encounters the objection of cost—not only the cost of installation, but the still greater cost incident to a recasting of utilities adjusted to the new invention. Now a cost will never be incurred except with the thought of gain, and the cost of installation and adjustment will not be undertaken except from the same gainful motive; and in proportion as competition has been eliminated the motive of gain in such case is lessened.

"The claim that great combination leads to development runs counter to human nature to the extent that such development is rendered unnecessary by the elimination of competition.

"It is said that the dynamic force, as it has become the fashion to call the energy of America, must have a medium for its outlet. If possible there is involved in this suggestion a fallacy even greater than that involved in the suggestion that vast combination tends to efficiency. It may be a blunt way of putting it, but there is not a suggestion in the Sherman Anti-Trust Law which conflicts with the expansion or outlet of the dynamic force, so far as such force is applied strictly to production to meet the demand of home and foreign markets, independent of the methods and practices employed. If there were a demand for the triplication of the output of any product there is nothing in the law which prohibits such triplication. If capital today desired to construct a new productive agency there is nothing in the law which prohibits the establishment and operation of such agency. If a demand for some new adjunct of civilization should rise there is nothing in the law to interfere with the supplying of such demand to the fullest extent. Independent agencies have been established and developed, and can be established and developed, to meet any requirement of demand without challenge from the Sherman Anti-Trust Law. That law deals with the methods and practices employed in restraint of trade and the creation of monopolies, but leaves the establishment and development of independent agencies to any extent unchallenged. Nor has the Government at any step challenged production. It has only challenged practices and methods calculated to restrain trade or create monopoly. This cannot be overemphasized in view of the claim constantly made that the law and its enforcement tend to place a check upon American industrial activity.

"The Sherman Anti-Trust Law does not seek to limit the productive capacity of America's dynamic force, but it seeks the very reverse—to prevent the placing of a limitation upon its activity." *(Continued on Page 61)*

The Pearls of the Princess Patricia

By EDWIN LEFÈVRE

ILLUSTRATED BY HENRY RALEIGH

ON THE day before Christmas a man of middle age, middle height and middle weight, smooth-shaven, dressed in black and wearing black gloves, walked into the business office of the New York Herald. He approached the first "Advertisements" window, looked at the clerk a moment, opened his mouth and said several words—at least, so the clerk judged from the motion of the man's lips.

"I didn't hear that, Cap," said the clerk, Ralph Carroll.

The stranger thereupon made another effort.

"You'll have to come again," Carroll told him kindly, at the same time leaning over the counter and presenting his left ear to the voiceless talker. He heard.

"How much to print this ad under Male Help Wanted, in big type, so it will make about two inches?"

He handed a slip to the clerk, which the clerk read, counting the words from sheer force of habit:

> WANTED—A Man With St. Vitus' Dance and an Introspective Turn of Mind. High Wages to Right Party. Apply Saturday Morning, Room 888, St. Iago Building.

"Four sixty-four," said the clerk.

The man raised his eyebrows inquiringly.

"Four dollars and sixty-four cents," repeated Carroll.

The man took out a wallet and tried to pull out a banknote, but could not because of his gloved hands. He took off the right glove, fished out one five-dollar bill and gave it to the clerk, who handed him back thirty-six cents. As the man took the change the clerk distinctly noticed that he had a big ivory-colored scar which ran from the knuckles to the wrist and disappeared under the cuff. He remembered it by reason of the freak ad and the man's voice.

The advertisement appeared in the Herald the next day. Being Christmas, the one day of non-reading in America, few people saw it. Nevertheless, at nine on Saturday morning, ten men with spasmodically twitching necks or limbs waited for the advertiser to open the door of Room 888, on which they saw in gilt letters:

ACME VIBRATOR COMPANY
W. W. LOVELL, Manager

The elevator man was heard to tell an inquirer: "Here's Lovell!" And presently the voiceless man, dressed as usual in black, with black gloves, stepped from the elevator, nodded to the waiting men in the hall and opened the door of 888. At first they thought he was a mute, but realized later that he was merely saving his bronchial tubes, just as asking men to come Saturday forenoon—payday and payhours—would save effort by bringing only men without employment.

"It is Eleven-Eleven, Today the Eleventh. Give Me the Eleven Letters for W. W. Lowry"

Lovell and the afflicted entered. The outer office had half a dozen chairs and a table on which were some medical magazines. Lovell scrutinized the ten applicants keenly and finally beckoned to a tall, well-built chap with a blond mustache, whose unfortunate ailment was not so extreme as the others, to follow him into the inner office. The man did so. There were a desk, three chairs, a table and a dozen polished oak boxes that looked as though they might contain vibrators. Lovell closed the door, sat down at the desk, motioned to the blond man to approach and whispered:

"What's your name?"

"Lewis J. Wright."

"Age?"

"Thirty-six."

"Working?"

"Not steadily."

"Profession?"

"Cabinetmaker."

"Family?"

"No."

"Do you object to traveling?"

"No; like it."

"We pay sixty dollars a week, all traveling and living expenses. Will you go to London, England?"

"To do what?"

"Nothing!"

"What?"

"Nothing!" again whispered the manager very earnestly. He seemed anxious to convince Mr. Wright of his good intentions. "Nothing at all! Sixty a week and expenses!"

"I don't understand," said Mr. Lewis J. Wright with an uneasy smile. His excitement aggravated the malady and his neck jerked and twitched almost constantly.

"I want a man with St. Vitus' Dance."

"That's me," said L. J. Wright, and proved it.

Digitized by Google

"And with an introspective turn of mind. Understand?"

"Not quite," confessed the cabinetmaker.

"A man who likes to think about himself."

"I guess I can fill the bill all right," asserted L. J. Wright confidently. Sixty a week, all expenses and a trip to London began to look very attractive.

"Then you're engaged." The manager nodded.

"I don't know yet what I'm to do," ventured Wright.

"Nothing, I tell you."

"Well, I'll do it, then!" And L. J. Wright smiled tentatively; but the manager of the Acme Vibrator Company looked at him seriously—almost reprovingly—and whispered so hoarsely that Wright felt like going after cough lozenges for him:

"Listen, Wright. You will go to London with a letter to Dr. Cephas W. Atterbury, 23, Abbey Road, St. John's Wood, N. W. Every day you will sit down in a comfortable chair in the doctor's anteroom, where the patients wait, from nine to eleven A. M. and five to seven P. M. You will think of your St. Vitus' Dance.

"You will get sixty dollars a week from us and your hotel bill will be paid by the doctor. You may not have to sail for a month, but your salary begins on Monday. Come here every Saturday and get twenty-five dollars on account. When you sail you will get all that's owing to you besides four weeks' salary in advance and a round-trip ticket, first class."

"But if I get stranded in London ——"

"How can you, with three or four hundred dollars in your pocket, a return-trip ticket and no need to spend except for clothes, which are very cheap there? Come next Saturday, but leave your name and address in case we need you. Can we depend on you?" He looked searchingly into the grayish-blue eyes of Lewis J. Wright, and seemed comforted when Lewis J. Wright answered:

"Yes. I'll go on a minute's notice." He wrote his name and address on a slip, gave it to the manager and went out. Lovell followed him to the outer office and, beckoning to the afflicted nine to draw near, whispered:

"I've hired a man, but I shall need more soon. Write your names and addresses and leave them here. Don't come unless I send for you," and he distributed printed blanks on which each applicant wrote out his name, address and answers to the questions:

1—Do you object to traveling alone?
2—Do you object to sitting in comfortable chairs?
3—Do you object to people making remarks about you?
4—Do you object to minding your own business or earning your wages?

One of the applicants spoke:

"Mr. Lovell, I'd like to know ——" Lovell, however, cut him short with a hoarse but peremptory "Don't talk! Can't answer!" pointed to his throat and disappeared in the inner office, the door of which he closed.

Whereupon the disappointed applicants, expressing their feelings in a series of heartrending jerks, twitches, tremors and grimaces, trooped out into the hall. There they cross-examined the lucky Wright and arrived at the conclusion that they were to be used as living advertisements for the Acme Vibrator. Doctors were employed to boom it and the company supplied dummies or "property" patients.

II

TO THE same clerk in the Herald office, a fortnight later, came the same man in black and whispered something. The clerk recognized him, leaned over and asked pleasantly:

"What is it this time?" He had a good memory. He afterward remembered thinking that the hoarseness was chronic.

"How much for one inch in Help Wanted, Male?"

"Pica caps?"

The man nodded eagerly half a dozen times.

"Two dollars and thirty-two cents."

The stranger, in trying to take the exact amount from his pocket, dropped a dime on the floor and had much difficulty in picking it up by reason of his black gloves. This naturally made the clerk remember about the scar, which the man evidently desired to conceal. Carroll, the clerk, alert-minded and imaginative—as are all American Celts—caught a glimpse of the scar between the end of the glove and the beginning of the cuff.

On the next day the unemployed males of New York read this in the Herald:

> WANTED—A Brave Man. Wages One Hundred Dollars a Day. No Questions Answered. Apply Room 888, St. Iago Building.

There are many brave men in New York. When W. W. Lovell stepped from the elevator at the eighth floor he had almost to force his way through a crowd of men of all kinds—brutes and dreamers; sturdy animals and boys with romance in their eyes; fierce-visaged, roughly dressed men and fashionably attired chaps with high-bred, impassive faces; young men seeking adventure and old men seeking bread. Lovell was darting keen glances at the men. He let his gaze linger on a man neither short nor tall, of about forty, who suggested determination rather than reckless courage. He was shabby with the shabbiness of a man who not only has worn the clothes a long time, but has slept in them. Lovell approached him and whispered:

Lovell Scrutinized the Ten Applicants Keenly

"Come about Herald ad?"

"Yes." Others drew near and listened.

"Are you really brave?" He looked anxiously into the man's face. The man, at the question and at the grins of his fellow applicants, turned a brick-red.

"Try me!" he answered defiantly.

"Before all these men?" There was a challenge in the hoarse whisper.

"If you want to," answered the man with quick anger. He clenched his fists and braced his body as for a shock.

"Come in!" and W. W. Lovell opened the door of 888.

"I'm braver than that guy!" interjected a youth, extremely broad-shouldered and thick-necked.

Mr. Lovell looked at him coldly, steadily, inquisitively, as though he would read the man's soul. He stared fully a minute and a half before the thick-set youngster dropped his gaze, whereupon Mr. Lovell pushed in the man he had picked out, followed him and slammed the door in the faces of the others. They tried the doorknob in vain. It was a spring lock.

Mr. Lovell sat down at his desk, motioned to the man to draw near and said sternly:

"No questions answered!"

"I'll ask none."

Lovell gazed at him intently. He nodded to himself with satisfaction and proceeded in a painful whisper:

"Your name is W. W. Lowry."

The man hesitated. Lovell frowned and, leaning forward, said:

"One hundred dollars a day!"

"My name," said the man determinedly, "is now W. W. Lowry."

"Do you know anything about travelers' checks used by the American Express Company?"

"Yes."

"Ever used any yourself?"

"No."

"Ever in Paris?"

"Yes."

"When?"

"When I was—er—years ago."

"How many years?"

"Ten; no—eleven!" The man's face twitched. Remembrance was evidently not pleasant.

"I'll pay you one thousand dollars for eight days' work in Paris."

"I'll take it."

"Listen carefully."

"Go ahead." The man looked alert.

"You will get a first-class ticket from New York to Paris and return, and hotel coupons for ten days in the Hotel Beraud, in Paris. You will leave in all probability on February first, arrive on the eighth. On the ninth you will go to the American Express office and cash some of your checks. They will serve to identify you. Do it again on February tenth. At exactly eleven minutes past eleven on the eleventh you will whisper to the mail clerk: 'It is eleven-eleven, today the eleventh. Give me the eleven letters for W. W. Lowry.' If you do not receive eleven letters don't take any, but return the next day at precisely the same hour and say exactly the same words. What was it I said you should say to the correspondence clerk?"

"It is eleven-eleven, today the eleventh. Give me the eleven letters for W. W. Lowry," repeated the man.

"Right! When you get the eleven letters you will bring them unopened to me—here. Now go to Mrs. Brady's boarding-house, 299 East Seventy-third Street; tell her you are Mr. Lowry. Your room and board are paid for. Make it a point to be at the house every day at eleven in the morning until after luncheon and at six P. M. You must not go out evenings under any circumstances. I'll allow you eleven dollars a week for tobacco and will bring you some clothes. Come back Wednesday at eleven-thirty. Here's this week's eleven dollars. That will be all."

"That's all right, my friend; but ——" began the man.

Lovell frowned and interrupted sharply:

"No questions answered!"

"I wasn't going to ask; I was going to remark that you would have to show me that one thousand dollars for the week's work."

"Next Wednesday I'll take you to the American Express Company. I'll give you one thousand dollars and you will buy the checks yourself and sign them. I'll keep them until sailing day and I'll give them to you on the steamer. Forging," he went on with a sneer, "is signing another man's name with intent to defraud. You will sign your own name—your own signature!—on travelers' checks that you yourself have paid for. See? A thousand dollars for asking for eleven letters and bringing them to me, unopened, is good graft, friend. If you make good I'll keep you busy!"

"You are on!" said W. W. Lowry.

"No drinking. Above all things, no talking! I may be crazy, my friend; but what would you be if you gave up a job worth a thousand dollars a week and all expenses paid? Remember our motto: No questions answered!"

"Damned good rule!" agreed W. W. Lowry with conviction.

"Look out for reporters and for men who say they are reporters!" warned W. W. Lovell. "When you go out close the door quickly behind you and hang this sign on the doorknob. I don't want to see anybody."

W. W. Lowry obeyed. The sign said:

POSITION FILLED

III

A PARTICULARLY beautiful limousine stopped before the door of Welch, Boon & Shaw, the renowned jewelers, on Fifth Avenue. There alighted from it on this cold but bright January day a tall, well-built man, erect, square-shouldered, head held high. He wore a fur-lined overcoat with a beautiful mink collar, and a mink cap. He was one of those blond-mustached, ruddy-complexioned, daily-cold-plunge British officers you sometimes see in Ottawa. He walked quickly into the shop and spoke to the first clerk he saw.

"Where's the proprietor?"

"Who?"

"The proprietor of the shop!" He spoke with a pronounced English accent. His eyes were gray and cold. They looked a trifle close together, but that may have been

Digitized by Google

from the frown—said frown impressing even a casual observer as a chronic affair. His appearance, even without the frown, was aristocratic.

"Do you wish," said the clerk politely, "to see Mr. Boon or Mr. Shaw?"

"I wish to see the man who owns this shop; the—ah!—boss, I think you call it here."

"Well, Mr. Boon ——" began the clerk, about to explain.

"I don't care if it's Mr. Loon or Mr. Coon. Be quick, please!" he said peremptorily.

The clerk, now resenting the stranger's words, tone, manner, attitude, nationality and ancestry, turned to a floorwalker person and called:

"Mr. Smith, this—ahem!—gentleman wishes to see one of the firm."

Mr. Smith came forward, smiling suavely.

"You wish to see one of the firm, sir?" He bowed in advance.

"Yes. That's the third time I've said what I wish. I have no time to lose and not much patience either!" He twitched his neck and twisted his head as though his collar were too tight. It was a habit, and it became more pronounced with his annoyance. All the clerks noticed it.

Mr. Smith bit his lip and said very politely:

"Yes, sir. It happens that none of them is in at present. If you will tell me what you wish to see them about I may suggest ——"

The fur-coated man turned on his heel, his face dark red with annoyance, and started to leave the shop.

"Goodby, old Jerk-Neck!" muttered the offended clerk.

Mr. Boon entered at that very moment.

"Here's Mr. Boon, our senior partner," said Mr. Smith with an irritation in his voice that he could not conceal and which gave Mr. Boon his cue.

"You wish to see me?" Mr. Boon asked it very coldly, ready to say no.

"You have an annoying set of clerks here," said the fur-coated stranger. "I wished to see one of the firm and ——"

"You see him now," interrupted Mr. Boon, letting the words drop out with an effect of broken icicles. "I am Mr. Boon."

"My good man, I came after some pearl necklaces and a few rings and trinkets. Do make haste! I am Colonel Lowther."

"Indeed! Well, what if you are Colonel Lowther?"

In Mr. Boon's eyes was a look that made all the clerks in the store busy themselves with their own affairs. Explosions scatter dangerous fragments that may injure lookers-on. The fur-coated Englishman stared at the sizzling jeweler in amazement.

"Damme!" he sputtered. "Do you mean to say —— Oh!—I see! Yes! I am the secretary of the Duke of Connaught. The jewels are for His Royal Highness."

The change was instantaneous and magical. They all understood now and forgave. There wasn't a clerk in the store who did not stare with unchecked interest at the fur-coated member of the royal party, concerning which the newspapers were printing columns and columns.

"May This Gentleman Telephone for Me? My Throat is in Pretty Bad Shape"

The man opened his coat, took a card from a Russia-leather case, which he gave to Mr. Boon:

"Colonel the Honorable H. C. Lowther, K. C. B." it read, "Private Secretary to H. R. H. the Duke of Connaught."

"Colonel Lowther," said Mr. Boon in a voice from which all the icicles had melted and turned into warm honey, "I regret exceedingly that you have had to wait. Had I known you were here, or if you had only mentioned who you were ——"

"Exactly so. Yes! And now I'll have a few words with you in private, Boon."

The colonel could not know that Mr. Boon was not a misterless Bond Street tradesman, but a millionaire expert in gems and human vanity. So Boon forgave the omission of "Mr." and magnanimously said: "This way, Colonel Lowther, please!"

In the office Mr. Boon opened a box of his good cigars—and they were very good indeed—and held it toward the colonel, who took one with his gloved hands, lit it at the flame of the match which Mr. Boon himself held for him, and puffed away, with never a "Thank you."

Again Mr. Boon was magnanimous.

Colonel Lowther wiggled his neck as if his collar were uncomfortably tight, and then shot his head forward with a motion that made the chin go up six inches—a nervous affliction that Mr. Boon politely ignored by looking exaggeratedly attentive.

"His Royal Highness wishes to leave some remembrances to gentlemen he has met, you know—chairmen of committees and presidents of clubs, and others who have been very nice to him. At home he would have given them snuffboxes or cigarette cases, with his arms on them; but there won't be time to engrave them, so he will give scarf-pins." He paused, puffed at his cigar, and cleared his neck of the constricting collar.

"I understand," Mr. Boon assured him deferentially.

"And the duchess will give rings and—ah!—lorgnette chains—trinkets—ah!—you know. Everybody in New York has been so kind to the party. 'Pon my honor, Boon, I really think Americans are keener for royalty than the British. I do! What?"

"Blood," observed Mr. Boon with the impressive sententiousness of a man inventing a proverb, "is thicker than water!"

"Eh? What? Oh! I see! Yes! Quite so!"

"Our people," pursued the encouraged Mr. Boon, "have always thought a great deal of the English—er—British royal family."

"Oh, indeed! Now, Boon, I didn't think you showed great affection for George III! What?"

Mr. Boon blushed to think of Bunker Hill. His daughter was a D. A. R. too! He hastened to change the subject.

"You mentioned," he said as though he were reading aloud from one of the Sacred Books, "some pearl necklaces. At least I think you did." He put on the tradesman's listening look in advance. It is the look that courtiers assume when they listen to His Majesty excitedly telling how once on a hunting trip he almost dressed himself.

"Oh, yes! The pearls are for the Princess Patricia. A necklace to cost not over ten thousand. You see, the duke is not one of your Pittsburgh millionaires. He's not what you'd call rich, in America!" He smiled democratically, as a man always does when he is pleased with his own wit. Mr. Boon smiled uncertainly.

"You can't, of course," he said regretfully, "do much with ten thousand dollars."

"Not dollars—pounds! Perhaps we may go up to fifteen thousand; but His Highness would prefer to keep at about ten thousand pounds. That's fifty thousand dollars."

"I am sure we can please His Highness," said Mr. Boon with impressive confidence. There fleeted across his mind the vision of the tremendous value of the advertisement which the royal patronage would give him. The papers were full of the doings of the distinguished visitors. He himself on his way to the office had been guilty of the pardonable curiosity which the lower classes call rubber-necking; and he had even discussed—in common with 89,999,999 fellow Americans—the personal pulchritude of the royal ladies. Usually democracy is enabled to apologize to itself for its undemocratic

"Now, Boon, Think Carefully—the Very Lowest Price," He Said Sternly

interest in feminine royalty by saying: "She isn't at all good-looking." That excuse, however, did not serve in this instance. The Princess Patricia was the most popular girl in New York—with the classes because she was the princess, and with the masses because she was so pretty! And to think of selling pearls to her!

He closed his eyes and ecstatically read what the papers would print about the sale! He heard himself saying to Mrs. Carmpick, of Pittsburgh: "This necklace is handsomer than the one we sold to Princess Patricia!" He heard the rattle in the throats of Johnson & Pierce, of J. Storrs' Sons, of the sixteen partners of Goffony's, dying from apoplexy superinduced by envy, or from starvation following the loss of all the swell customers!

"Ah, you realize, of course, Boon, that His Royal Highness' patronage is worth many thousands to your firm. What?"

The colonel's eyes, Mr. Boon thought, were cold and greedy, as befitted a common grafter. Mr. Boon resented this, having himself been caught red-handed getting something for nothing. If he had to pay a commission ——

"We appreciate the honor, of course, Colonel Lowther," he said deferentially—and non-committally.

"Quite so! You ought to, considering how the newspapers will mention your shop."

"I may suggest, Colonel Lowther, that our firm's reputation ——"

"I know its reputation. That's why I am here"—the colonel's voice seemed colder than a Canadian cold spell—"but it is no better than your competitors'—Goffony, Johnson & Pierce, or J. Storrs' Sons. I figured that the duke's patronage should be worth thousands to Welch, Boon & Shaw; so you must make me a special price."

"We have but one ——"

"I've heard all that, Boon," the colonel interrupted angrily. "If you are going to talk like a bally ass I'll waste no more time here. Bring in the pearls. I can't take over a half-hour to this."

Mr. Boon's hard sense and knowledge of advertising values triumphed over his injured dignity. He excused himself and presently returned with a tray full of pearl necklaces.

"I say, Boon, on second thought, you must not reduce your prices. It's a bad principle."

"Yes, it is," agreed Boon cordially.

"Therefore, my good fellow, name me one price—the lowest possible after considering how much the duke's patronage is worth to your house. The very lowest! Put it in plain figures on new price tags. The duke is accustomed to the prices across the pond, you know; so don't frighten him. Now that one?"

He picked up at once the most beautiful necklace—and also the most valuable, though by no means the most showy. Mr. Boon's respect jumped. He looked at the colonel, whose neck and head were twitching and twisting violently.

"This one ——" he began. The colonel interrupted him:

"Now, Boon, think carefully—the very lowest price," he said sternly. "If you name a really reasonable figure I'll pledge you my word to recommend its purchase and not visit the other shops. Take your time!"

Thus placed on the rack, Mr. Boon figured and cut and restored and reduced again until he was angry at the torturer and at the opportunity for a glorious advertisement. Finally he said vindictively:

"This I'll sell for sixty-five thousand dollars!" Immediately he regretted it. Perhaps he was overestimating the advertising value of the Princess Patricia's beautiful neck to exhibit his pearls on. The price was exactly thirty-five thousand dollars less than he had expected to get for it during the next steel boom.

"Oh, come now, I say," remonstrated Colonel Lowther impatiently. "That's thirteen thousand pounds. It's too much, you know."

"Colonel Lowther," said Boon, pale but determined, "I am losing considerable money on this, which I am charging to advertising account and may never get back.

Digitized by Google

If the price is not satisfactory I am sorry; and I can only suggest that you'd better go to the other firms you've mentioned. They are all," he finished quietly, "very good firms!"

Colonel Lowther, who had not taken his keen eyes off the jeweler's face during the speech, appeared impressed by Mr. Boon's earnestness. His neck jerked spasmodically half a dozen times before he said:

"I believe you. I'll take it. But first mark it—in pounds; thirteen thousand pounds." And he looked on, eagle-eyed, while Mr. Boon himself wrote out a new price tag. Evidently he would take no chances with sleight-of-hand substitutions. "Put it here," he said, "beside me."

It made Mr. Boon say, half angry, half amused:

"We won't change it for an imitation string. We are really a reputable firm, Colonel Lowther."

"Oh! Ah! Really, I—ah!" stammered the colonel, "I wasn't thinking of such a thing!" He looked so absurdly guilty, however, that Mr. Boon forgave him. "I think you'd better show me others—ah!—cheaper, you know, in case the duke should not wish to go above ten thousand pounds. Say, that one—and this!—and this!"

He had selected the three next best; but Boon figured very closely and in all instances named a price below cost: fifty-seven thousand five hundred dollars, fifty thousand dollars and forty-five thousand dollars.

"Put them here also with the first one," said Colonel Lowther.

"Don't you wish us to put them in boxes?" asked Mr. Boon.

"Ah!—ah!—I say, bring the boxes in and I'll put them in. We'll do it more quickly," he finished lamely.

There flashed across Mr. Boon's mind the possibility of crookedness. Colonel Lowther did not trust them—perhaps because he hoped to avert suspicions by that same attitude of distrust! Mr. Boon determined to watch closely. He asked a clerk to bring some cases for the necklaces.

"You fix them, Boon," said Colonel Lowther, who was watching the jeweler's hands as children watch the hands of a prestidigitator. It actually eased Boon's mind to be taken for a crook. He arranged the necklaces, each in its own Russia-leather case, and then gratefully helped Colonel Lowther to select two dozen scarfpins, amounting in value to eighteen thousand dollars; a score of rings worth in all a little over twenty-five thousand dollars, and a few lorgnette chains and other trinkets. Once all these were duly price-tagged, packed and placed beside the necklaces, Colonel Lowther, after a series of mild cervical convulsions, said calmly:

"Now, Boon, you and I must settle a personal matter. You know, of course, the royal party never pays cash."

"Then," said the impetuous Mr. Boon, "the deal is off!"

"Silly ass! The royal family of England always pays. You know very well that the jewels bought by King George for gifts for his coronation guests have not been paid for yet. It's all a matter of red tape. The money is as safe as the Bank of England! Any banker here would be glad to guarantee the account—only that would never do, of course. Now you know I can't take any commission. I've made you give me the lowest prices for the duke, haven't I? What?"

"Yes, you have; and therefore I can't ——"

"If I were a bally Russian I'd have made you name a price twice the usual figure and I'd have taken the difference as a commission. It's what you Americans call graft, I believe. What?"

"Of course," said Boon coldly, disgusted with the venal aristocracy, "we'd never have done such a ——"

"Tut, tut! It's done everywhere; but not to me!" Colonel Lowther said so sternly that Mr. Boon considered himself accused of unnamed crimes. He resented this, but, being unable to fix the exact accusation, contented himself with remarking diplomatically:

"Of course not! But at the same time ——"

"Yes, yes," rudely broke in the colonel with a silencing wave of his gloved hand. "Now I can myself pay you in cash for whatever the duke buys—say, up to twenty thousand or twenty-five thousand pounds. For advancing this money, which will not be paid to me for months, I ask you to allow me a half-year's interest. That," finished Colonel Lowther impressively, "is banking. What?"

"At what rate?"

"Oh, eight or ten per cent."

"Impossible!"

"Then, Mr. Welch, Boon, or whatever your name is, I wish you a very good morning!"

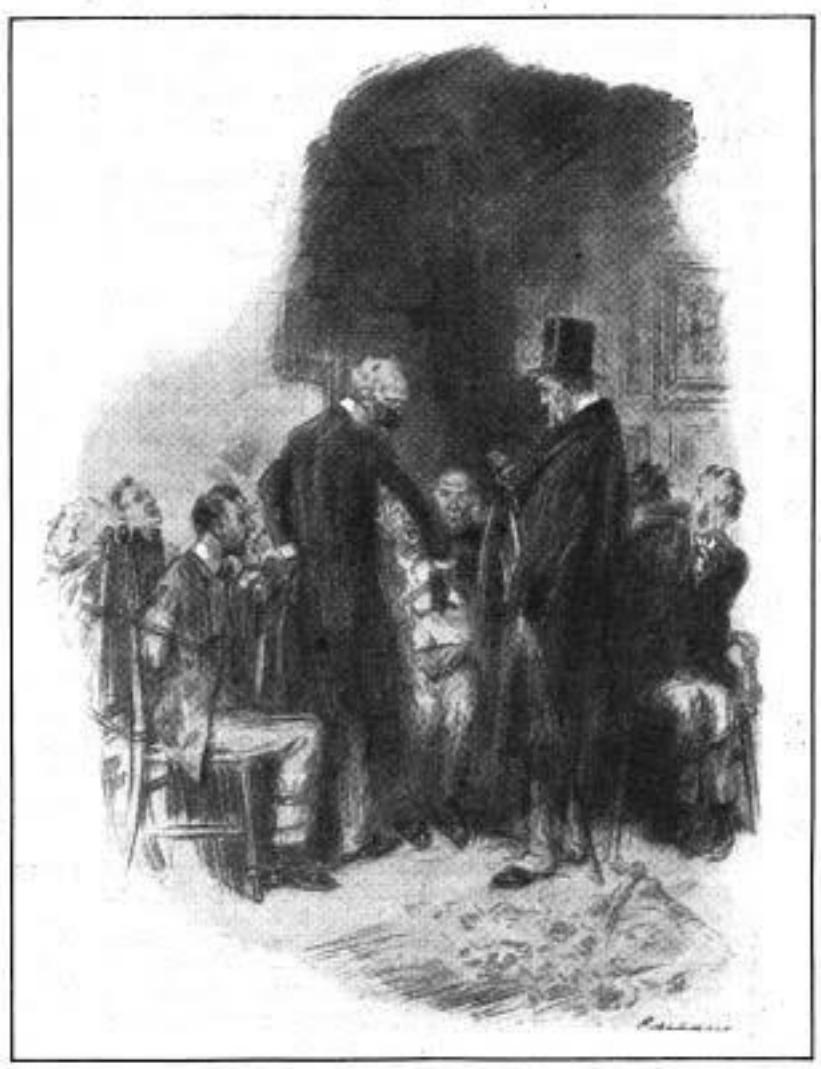
"But we'll allow you interest at the rate of six per cent a year."

"But I myself have to pay five for the use—ah!—that is—er ——" floundered the Englishman. Mr. Boon perceived instantly that the colonel borrowed the money from Canadian bankers at five per cent and got ten per cent. It was not a bad scheme for high-class aristocratic graft! Even a jeweler could philosophize about willful self-delusion, the point of view, custom, and so on. "Make it seven per cent. What?"

Mr. Boon could not help admiring the persistency of the Englishman in coating his graft-pills with the sugar of legitimacy. Doubtless the colonel had really convinced himself this was not graft!

"Very well," said Mr. Boon with a smile. "I'll take three and a half per cent off for cash."

"But we agreed on seven!" remonstrated the Englishman.



"Well, three and a half per cent of the whole is the same as six months at seven per cent."

"Oh!" The colonel began to figure in his mind. His cervical contortions, twitchings and jerkings were painful to behold. Mr. Boon thought it was a mild form of St. Vitus' Dance. It would enable him to recognize the colonel in a crowd of ten thousand.

"Quite so! Yes—three and a half per cent of the total bill. It will be at least twenty thousand pounds—that's one hundred thousand dollars. Not half bad! What?"

"Do you mean your commission will be one hundred thousand dollars? I'm delighted to hear it!" Mr. Boon was so pleased that he jested. He would play up the royal patronage to the limit.

"Oh, no! I meant the total amount, you know," corrected the colonel earnestly. He saw that Boon was smiling, and gradually it dawned on him that the jeweler was an American humorist. "Oh! Ah! Yes! Very funny! Quite so! I wish it were! How many millions would the bill have to be for the cash discount to be twenty thousand pounds? What? Right-O! Well, now bring the pearls and the other things to the motor. I shall show them to His Royal Highness at once. I can let you know in a half hour which he will keep." And he rose.

"I Can't Let You Kill the Beggars in Cold Blood"

"Ah!—er—colonel, you know we don't like to—ah!—there's over two hundred thousand dollars' worth of jewels, worth four hundred thousand dollars in any other place in New York; and if anything happened ——"

"Nothing will happen," said the colonel, with assurance.

"And then, it will take a long time to prepare the memorandum of ——"

"Why do you need a memorandum?" inquired the colonel coldly. He looked as if he began to suspect that Mr. Boon distrusted a member of the suite of His Royal Highness, Prince Arthur William Patrick Albert, K. G., K. T., K. P., P. C., G. M. B., G. C. S. I., G. C. M. G., G. C. I. E., G. C. V. O., Duke of Connaught and Strathearn, Earl of Sussex, Prince of Coburg and Gotha, Governor-General of Canada and potential customer of the world-renowned firm of Welch, Boon & Shaw.

Reading the emotions on the colonel's face and not desiring to offend, but at the same time determined not to deliver two hundred thousand dollars' worth of goods to a stranger, who might be the duke's secretary but might not be a reliable man financially for all that, Mr. Boon groped for an excuse.

"Why should you need a memorandum if you yourself will bring the jewels? Did you think I was a bally clerk to sell your jewels for you? You do the talking—and don't change the prices!"

So profoundly relieved as not to resent the last insult, Mr. Boon smiled pleasantly and said:

"I must take a man to carry them."

"Take a regiment if you wish; but there's room for only three in the motor," said the Englishman, his neck twitching and twisting and jerking quite violently. Anger seemed to aggravate his nervous malady. Wherefore Mr. Boon hastily gathered up the packages, put them into a jeweler's strong valise and followed the colonel, accompanied by Terry Donnelly, the store's private policeman, who carried the precious satchel in one hand, and in the other—in his overcoat pocket—an automatic pistol of the 1912 model.

One of the clerks must have told of the affair, for there was an eager crowd on the sidewalk. They had heard that the Duke of Connaught's secretary was in the store, buying diamonds. By the time it had passed seven mouths it was the duke himself. Mr. Boon heard: "There he comes!" and "Is the princess with him?" and "Which is the duke?" And he had pleasant visions of free reading-notices and renewed popularity among the ultra-fashionable.

One of the traffic squad was trying to make the crowd move on—in vain.

The colonel good-naturedly forced his way through the mob to the motor, followed by the jeweler and the store policeman, who saw on the door of the limousine the letters:

W. R.

And both of them concluded that this stood for the well-known initials of the duke's host.

A short woman, with red hair and a self-assertive bust, stared boldly at the colonel and said: "He don't look like his pictures."

"Say, are you the duke?" asked a messenger boy. However, the colonel merely said "Home!" and entered the motor, followed by Mr. Boon and T. Donnelly. The store footman closed the door as if it were made of priceless cut glass. The traffic policeman touched his cap and the motor went up the avenue.

The colonel picked up a newspaper from the seat and turned to Mr. Boon.

"See!" he said, "our pictures. Your reporters are—ah!—very enterprising and clever. But the photographers are worse!" He laughed and went on: "The pictures don't look like me, d'ye think?"

"I recognize the coat and the fur cap," laughed Mr. Boon.

"Oh, do you?" said the colonel seriously. He looked at it and said: "But it might be my other fur cap, you know. What?" He looked challengingly at the jeweler.

"It might be," admitted Mr. Boon, diplomatically confessing his error.

"Quite so!" said the owner of the fur cap triumphantly.

Mr. Boon, finding himself nearer the house of the duke's host, began to feel more confident of putting through the epoch-making deal. It is not often that a New York jeweler sells pearls to an uncle of the King of England, to be used by the king's most beautiful cousin! He would have the princess' photograph in his window. It should show the famous necklace!

The motor took its place last in the long string of automobiles and carriages that were creeping toward the door of the house which His Royal Highness was honoring.

"Democracy meekly leaving its card at the house of royalty," laughed the colonel, pointing to the twoscore vehicles ahead of theirs.

"Americans paying their respects to an Englishman who is honored even in his own country," said Mr. Boon.

"Oh, now, I say, Boon, that's uncommonly neat, you know. What? But perhaps we'd better get out and walk; otherwise it may be a half-hour before ——"

A footman in livery came up to their motor, touched his hat with a respect that entitled him to a bank president's wages, and said to the colonel:

"I beg pardon, sir, but 'is Royal 'ighness 'as gone to Mr. Walton's, sir, at Number 899 Fifth Avenue. I was hinstructed to tell you to go there, sir."

How to Start a Coöperative Store

The Woman Who Has Received a Quarterly Dividend Should Urge Her Friends to Do Likewise

By WALTER E. WEYL

ILLUSTRATED BY IRMA DÉRÈMEAUX

IN GREAT BRITAIN and Ireland there are some fifteen hundred coöperative stores in which two and one-third million consumers buy from themselves and sell to themselves. The consumer is on both sides of the counter. When an English coöperator buys a shilling's worth of tea the profit is his. The man who gets the tea gets also the profit on the tea. The two and one-third million coöperators, representing eight millions of people, buy annually three hundred and fifty million dollars' worth of goods from themselves. Out of this transaction they save for themselves fifty-five million dollars. This is a considerable saving for poor people.

When we recross the Atlantic we find the coöperative store practically undeveloped. We have a few hundred such stores doing a business of ten or twenty millions; but if you were told by your wife to bring home a bag of salt from the nearest "coöp" you might find the task puzzling. The coöperative store is not an American institution. It may, however, become one; and the purpose of this article is to show how.

For a coöperative store to succeed two things are necessary—enthusiasm and knowledge. Without proper enthusiasm you cannot get the coöperative store going; without knowledge you cannot keep it going.

The reason why enthusiasm is so necessary is because a coöperative store is based on the common good rather than on private advantage. You cannot make your fortune in a coöperative store, for the profits go to all the consumers. There are stores called coöperative which are not coöperative in fact. To be truly coöperative a store must be owned, managed and controlled by the consumers alone, and all profits, or as much as the consumers want, must go to the consumers. A coöperative store is a consumers' store, owned and operated by and for the consumers.

The enthusiasm which is necessary is not a sudden flame, but a steady, quiet, long-continued loyalty. It is an enthusiasm that must survive mistakes, losses and the disaffection of other members. It is an enthusiasm that must attach itself not only to a particular coöperative store but to the coöperative principle in general.

We have had many coöperatives in America that were born of enthusiasm and died of disillusionment. From 1847 to 1859 hundreds of little "coöps" were started, but few of them lived through the Civil War. Again and again, during the seventies, eighties and nineties, coöperatives sprang up and disappeared. There was no lack of enthusiasm. All these ventures needed was a fuller knowledge of the difficult conditions requisite to success.

Shop and Savings Bank Combined

WHAT American coöperators for the most part have not realized is that our conditions in America are different from the conditions that existed in England when the great coöperative movement took its rise. Coöperation is a pennywise, poundwise policy. It is a combination of store and savings bank. For better or worse, however, we are not so pennywise as the English. We have always had a contempt for small coin and small savings. Again we have not been a stationary people. We have not stayed put. When in 1844 an English coöperative store was started by weavers in the town of Rochdale the members were fairly sure that they and most of their neighbors would remain in Rochdale for ten or twenty years; but where today are the people who lived a generation ago in Fall River or Shenandoah? The English are also more homogeneous. They speak the same language, believe approximately in the same religion, are bound by the same traditions. The very qualities that have made Americans what they are—initiative, elasticity, readiness to move and change—are facts which must be known and weighed if we are to transplant the coöperative store from England to America.

We must know other facts. We must study the causes of coöperative successes and failures in other countries. We must learn the lines of least resistance. For example, coöperation has not succeeded in the giant cities—London, Paris or Berlin—though successful in other places in England, France and Germany. There is a better chance in smaller places. There is a better chance where people know each other, where they are of the same race, in the same economic position and with the same traditions. The coöperative is built on neighborliness and mutual understanding.

Many of our coöperators did not know the rules of the game. They had enthusiasm but no special knowledge. They were as helpless as a lamb in Wall Street. They saw the goal, but not the road that led to it.

If you lived in England and wished to start a coöperative store all you would need to do would be to send a postal card to the Coöperative Union. The officers of that organization would tell you what to do and what to avoid. They would send you more Don'ts than you could find in a book on etiquette.

They would do more. They would give your new coöperative store a model constitution and bylaws. They would send you an experienced coöperator, who would start the ball rolling. They would advise you what business to engage in, what capital to collect, what stocks to buy. They would give you sixty years of coöperative experience in sixty hours.

We are not in England and we must stumble along as best we can. Certain information and advice can be obtained from such American coöperative societies as have succeeded, and more general information may perhaps be obtained from the Coöperative Union in England.

Before you ask advice, however, be absolutely sure you want to start a coöperative store. Be sure your neighbors want to. Remember that to be successful the store needs allegiance, attention, patience. You will not like all the people in your coöperative. You will not always have everything your own way. A coöperative store is not a thing which, once started, runs by itself. Coöperation is an ideal, but it is also steady, patient, humdrum work. Be sure you are in earnest before you seek to start a coöperative store and before you seek to interest your neighbors.

Begin with your neighbors. However vast the movement may eventually become remember that you are starting only one store. Your wife is not willing to walk ten blocks to buy soap or sugar and your neighbors' wives are no less unwilling. Your coöperators must live fairly near together and the store you establish should be "just round the corner."

After you have made up your own mind, test your neighbors. Get them together. A dozen will do. Have more than one meeting. The people who are not interested will drop out. You will be stronger without them. Then let each man and each woman who is interested draw up a list of people willing to subscribe a few dollars to the capital and willing to purchase at the coöperative store. See these people. Get their assurances in as positive a form as practicable. Then call a meeting, form a tentative organization and elect temporary officers.

At about this time it will be advisable to see a lawyer. In England it is easy to form a new coöperative society because the law is uniform for the whole country and is exceedingly wise and practical. In the United States each state has a different legal system, and on the whole the law is not nearly so favorable to the coöperative. It is discouraging to have to pay a lawyer twenty-five or fifty dollars before beginning operations. It is better, however, to do this than to organize on an insecure basis and become entangled in lawsuits.

When should the coöperative store actually begin business? How many members are necessary—and how much capital? It depends. It is impossible to make any general rule that will cover the whole country. If you are starting in the Kensington district of Philadelphia you will meet problems entirely different from those of a small village in Indiana or Tennessee. In the larger cities rents and wages are higher. The amount of your capital depends also on how small a store you intend to start and whether the store is to be open all day long or only in the evenings. If the store is to be open all day it would not be wise in large places to begin with less than about one hundred members or with less capital than about one thousand dollars. There should be in sight a probable business of about four hundred dollars a week. However, all these things depend upon location and the character of the enterprise. In some places and for some stores half or even a third of this capital and membership will suffice.

How to Accumulate Capital

THE capital should be raised by the members. It should not be borrowed. The coöperators must remember that stability is absolutely necessary, and if the members have a stake in the business they are more likely to be loyal to the store. Shares of stock should be five dollars each. Every member should be obliged to acquire one share. No member should be allowed to acquire more than two hundred shares. These shares should be transferable from member to member, but at the beginning it is perhaps wiser not to give the member the right to draw out his capital except by the special consent of the society. The shares should pay six per cent a year—or thirty cents a share—and this sum should be added to the dividend which the consumer receives on his purchases. Thus, if during the year you have purchased a hundred dollars' worth of goods and the profits are eight per cent, then your dividend on purchases is eight dollars. If you own two shares of stock—worth ten dollars—then your dividend on capital is sixty cents, making a total dividend of eight dollars and sixty cents.

It is not necessary to raise all the capital at once. It is not necessary to begin business at once. If the members cannot pay five dollars immediately let them pay fifty cents a month for ten months, and postpone beginning operations until the required capital is fully paid up. After you have begun business encourage the members to reinvest their dividends in the store. In the case mentioned the member may draw out his whole eight dollars and sixty cents, or he may draw out three dollars and sixty cents and take out a new share of stock. If he is very loyal he may add one dollar and forty cents to his eight dollars and sixty cents and take out two new shares. It is in this way that the capital of the British retail stores, aggregating about one hundred and fifty million dollars, has been accumulated. The British stores accumulate so much capital they hardly know what to do with it.

Your coöperative store must be open at the bottom. It must be free to all. It is not a social club in which men may be blackballed because some one does not like some one's religion or complexion. A man should not be admitted to the coöperative if he is known to be dishonorable or if he cannot get along with people; but apart from

Digitized by Google

this, membership should be as free as in a church. Foreigners who do not speak the language used in the coöperative should be advised to form coöperatives of their own. Especially must the coöperative be open to women. It is the women who do the marketing and the saving, and in England, Germany and elsewhere women have been the backbone of the coöperative movement. They should have all the rights, privileges and immunities of the men and should be eligible to all offices—even the highest.

Not only must the coöperative store welcome new members but it must welcome them on exactly the same terms as the old. If you buy your coöperative stock in 1912 and your neighbor buys his in 1920, he must get his at exactly the same price as you got yours—in other words at par. Whensoever the member joins—soon or late—he must get exactly the same rate of dividend as any other member. Equality of treatment is the first principle of the coöperative. It is because of this equality that the British coöperative movement has grown so rapidly and has been so transcendently successful.

When you have accumulated your thousand dollars—or whatever sum may be necessary to start—you may begin actual business. Here is the crux of the difficulty: Are you to sell pianos and Irish laces and jewelry and Paris models? Are you to try to compete with the great department stores? If you do—or if you do anything like this—you are inevitably foredoomed to failure. You must begin on the smallest possible scale.

The Men Behind the Counter

THE men who founded the gigantic coöperative structure of Great Britain began modestly. On a rainy night in November, 1843, a dozen poor weavers met in a back room of a mean little English inn and constituted themselves the Rochdale Society of Equitable Pioneers. They agreed to collect four cents a week per member, though several of the men present had not a farthing in their pockets. They bought a little tea and sugar at wholesale and sold it again to themselves, putting the profits into a joint fund. Their progress was at a snail's pace, but within a year they had grown to twenty-eight members and their capital had increased to one hundred and forty dollars. They were in no hurry. They made no splurge. They did not advertise. Out of this mustardseed beginning, however, sprang a stupendous coöperative movement that has powerfully influenced the conditions and thought of many nations.

The easiest beginning for an American coöperative store is like that of the Rochdale pioneers—the business of selling groceries and provisions. Even here it is wiser to start with staple articles—those for which there is a steady and predictable demand. Afterward you can increase the variety of your stock by adding hardware, tinware, crockery, and so on; but do not try too much at once. Seek to meet the normal demands of your present coöperators rather than to begin by attracting new trade. Above all do not embark upon businesses that require special knowledge, that are affected by the fluctuations of fashion or are in any way hazardous. In the beginning there are fewer difficulties with a small grocery than with a bakery, a butcher shop, a drygoods store, a shoe store, a millinery shop or a tailoring establishment. The other departments—some at least—may follow. At first, however—though conditions differ in different places—a small grocery located near the center of population of your coöperators and dealing conservatively in really staple goods is usually the best investment.

Select your grocery. Buy or rent it. If you rent it try to secure an option on a long-term lease. Remember always that you are dependent on locality. You must be near your coöperators. If you are able to buy out an existing grocery it may perhaps be better to do so, since there is small wisdom in duplicating plants. You cannot afford, however, to pay much for good-will, since you will primarily depend for your trade not on his patrons but on your own members.

At the beginning the store should be used as the place for the quarterly meetings of the members. At these meetings every member—man or woman—should have but one vote, whether he holds one share of stock or one hundred. In an ordinary corporation voting is by stock, in the coöperative it is by stockholders. One man may hold more shares than do fifty of his fellow-members, but he has only one vote.

The coöperators should select an executive committee of from seven to twelve members. Some of the members of this committee—perhaps one-fourth—should retire every quarter or year, and new elections should be held to reëlect them or to elect others in their stead. The executive committee should control the purchase of stock, should overlook the finances and other affairs of the society, and should select a storekeeper and his assistants. The storekeeper should be experienced and of unquestioned integrity, and should be a firm believer in the coöperative principle. He, like other employees, should be a member, buying at the store and thus receiving dividends on purchases and on capital as well as drawing weekly wages. The storekeeper should be responsible to the executive committee and the executive committee should be responsible to the coöperators.

It is the Women Who Do the Marketing and the Saving

With a store purchased or rented and a storekeeper appointed the coöperative is ready for active business. Care should be exercised in the selection of store fittings. The store should begin modestly. The fittings should not be more elaborate or expensive than those of competing shops. The successful coöperative store has the advantage of a membership attracted more by loyalty than by competitive display. The stock should be simple and easily vendible. The store should not be overstocked. The turnover should be rapid. Here, too, a well-organized coöperative has the advantage, since with a permanent patronage it should be able to forecast closely the probable sales of each week or month.

The question of the prices to be charged is all-important. In the history of the coöperative store two alternative price policies have presented themselves. A store may either sell at cost plus a reasonable charge for expenses or it may sell at current prices and divide the profits among consumers in proportion to their respective purchases.

At first glance the policy of cost prices seems the more logical. If the consumer is to get the profit why not give it to him at once—at the time of making his purchase? This plan, however, involves difficulties and has worked badly. It is almost impossible to fix prices on this basis. How much of the rent and of the salary of the storekeeper should be charged to a lemon or a ball of twine? If there are occasional losses from unwise purchases, and so on—and there will always be such losses—how are they to be met if all sales are at cost? Moreover, though the saving of a cent on a package of oatmeal or on half a pound of butter may not always appeal to the housewife, a dividend of eight or ten dollars a quarter is a factor of greater moment. The saving bulks larger when it is accumulated. The money is also more likely to be wisely invested or wisely expended if it comes to the consumer in a quarterly lump sum than if it comes three or four cents every day. The British coöperative stores, by adopting the policy of current prices and quarterly dividends, have enormously stimulated saving and investment.

Though its prices should, on the whole, be those current in the neighborhood, the coöperative should not try to meet every little cut made by competitors. A neighboring grocer may make a "drive" on sugar or butter, selling these articles at cost in order to attract customers. The coöperative store cannot afford to follow. It should not lose money on some articles to make on others. It should cultivate the loyalty of its members and should rely upon that loyalty. If the loyalty does not exist—if the coöperators do not patronize the store both from self-interest and from a feeling of pride in the store—the society will dwindle and soon disappear. The coöperative store is based not upon a willingness to meet every cut in price but upon the mutual confidence of the coöperators.

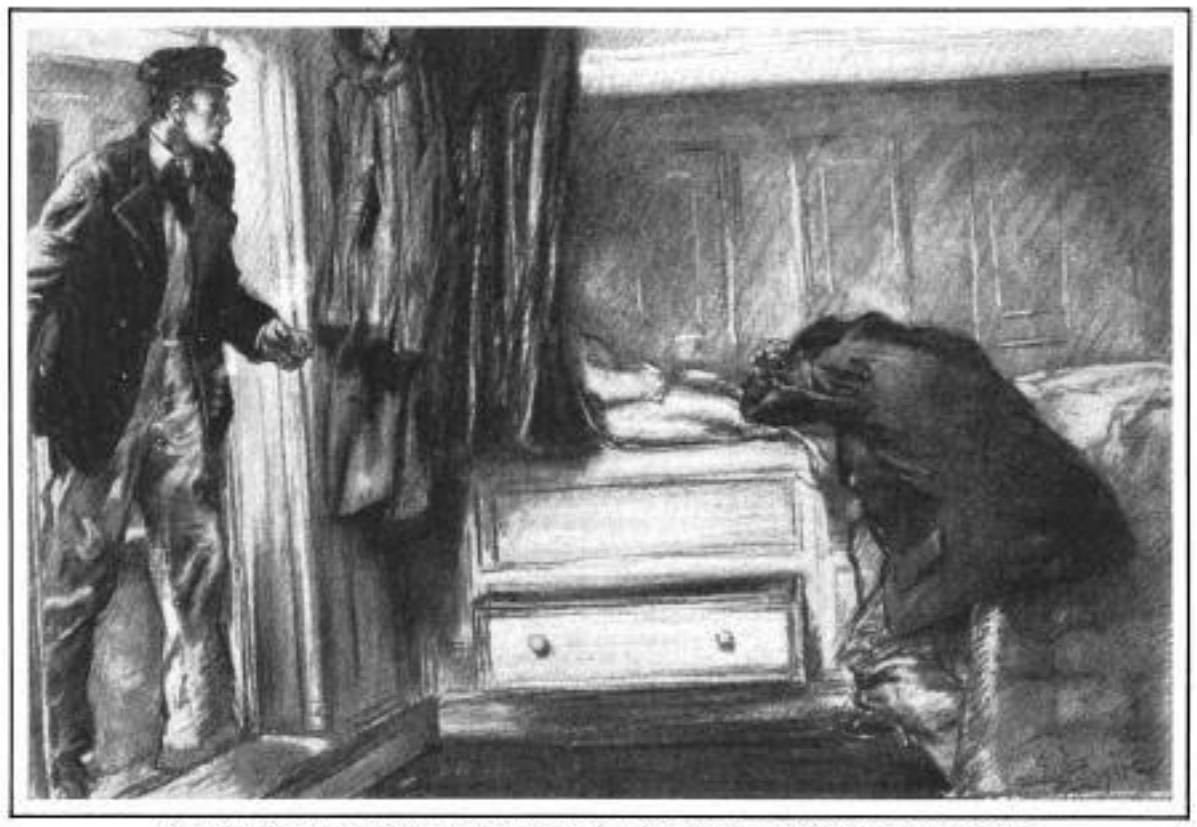
Out of This Mustardseed Beginning Sprang a Stupendous Coöperative Movement

The Policy of Paying in Cash

THAT mutual confidence need not take the form of buying or selling on credit. The British coöperatives began on the basis of purely cash sales. They lost nothing through bad debts. They escaped the ill will and friction resulting from the necessity of dunning slow-paying members. They allowed a member to buy at a rival store rather than extend credit to him. Latterly the stores, being well established, have relaxed this rule, and today many extend credit more or less regularly to a number of their members. Such a policy, however, would probably be fatal in the beginning of the movement. If a coöperative cannot be built up on a purely cash basis it is not likely to be built up at all.

The mutual confidence that must be the basis of the coöperative shows itself in many ways. The storekeeper, acting as the agent of the coöperators, must sell good articles, must abjure adulteration and false measures and must refrain from all manner of misrepresentation. In the coöperative it is the consumer who is selling to himself, and for the consumer to defraud himself is as senseless as to cheat at solitaire. On the other hand the coöperators have their duties. They should buy their provisions, whenever possible, at their own store. They should attend meetings. They should, if elected, serve on the executive committee. They should make a propaganda among neighbors. The woman who has received a quarterly dividend should urge her friends to do likewise. The more members there are to divide the earnings the larger is the share of each, for the cost of doing business diminishes, at least to a certain point, with every increase in the total sales.

How are the dividends to be determined? How is a man to know on New Year's Day what he and his wife and children have bought since October the first?



There is a very simple way. Each coöperator should be given a certain number. Let us suppose that yours is 161. You go to the store today and buy forty-seven cents' worth of goods. You pay your money and the storekeeper hands you as a receipt a little pink slip with 161 written in one corner and forty-seven cents in another. Your wife and children, when they buy, also receive a slip with 161 on it and the amount of their purchases. At the end of the quarter you can add these slips together and find out

BLUE BLOOD AND PIRATES

Three-Fingered Jack Spins a Yarn of the China Sea

"Oh, Tom! Tom, My Boy! Why Couldn't That Job Have Been Left to Somebody Else!"

By PETER B. KYNE

ILLUSTRATED BY GEORGE WRIGHT

THERE had been a deal of discussion that night in Three-Fingered Jack's place in Steuart Street, and the talk was of buried treasure. It appeared that the Schooner Carrier Dove had towed out with the tide that morning, bound for Cocos Island, with a party of adventurers who purposed unearthing the treasure which the Peruvian government had intrusted to an American shipmaster whose crew murdered him and ran away with the treasure to Cocos Island, where tradition says they buried it. Hence the talk in Three-Fingered Jack's. Finally, from buried treasure, the conversation drifted to pirates; and Three-Fingered Jack unbosomed himself of the following tale.

. . . . .

You'll read a lot in books about old Captain Kidd, and I suppose that some of it's true. And you'll hear a lot of talk from old mossbacks about the doings of Bully Hayes, who flourished in the South Seas thirty-five or forty years ago; but when I tell you that Tom Devine was the peer of the pirates I'm stating gospel—and I ought to know. I sailed mate with the man that hanged Tom Devine to his own stuns'l boom and I was present at the hanging.

I was master of my own ship at twenty-one and stayed master until I was rising twenty-five; then I had a little trouble with my crew, the beggars mutinied on me, and—well, I lost my ticket and went mate with a fine State-of-Maine man by the name of Tod Beasley, in the Brig Star of Chile. Our first voyage was from San Francisco over to Singapore; thence to Callao. In Callao we got a charter to Amoy and for upward of three years we ran regular between the West Coast and China.

I'd sailed under a good many skippers in my day, but Tod Beasley was the fairest and squarest and the easiest to get along with that I ever met. He was a nice man—a long, big-boned, black-haired, black-eyed Puritan—and as proud as Lucifer of the blood in the tribe of Beasley. He was old Mayflower stock, or something just as far back; and really he was too kindly a man to be master of a ship. Yet he wasn't a bit narrow-minded. He'd take his grog like any sailor and he'd fight with a drop of the hat; but for all that he was a good, honest man, with a strict sense of justice. If a man did his work and did it fairly well he could get along with Tod Beasley; but let him shirk and grumble, and them kindly black eyes of Tod Beasley would light up and you could see the devil in the man coming to the surface. He had a lot of old pictures of his ancestors in his cabin, with the coat-of-arms of the Beasley family engraved on an old set of silver, which he was very fond of getting out when he invited other shipmasters to dinner aboard the Star of Chile. He was a bit religious, too, and always said grace before meals; that was the only grudge I had against Tod Beasley. A seafaring man can get along without that. But he was a good man and stood for a square deal; and when I tell you he kept the same crew by him three and four voyages handrunning—and the China coast in them days wasn't no German beer garden—you can see he was a good man and a sailor, every inch of him.

Them were the lively days on the China coast! There was pirates there aplenty. Around the southern end of Formosa and off the mouth of the Canton River they were as thick as fleas on a chow-dog, and every sailing vessel went armed. The Star of Chile was no exception to the rule. We carried a long six forward, two six-pound howitzers amidships, and two quarter Gatlings. We had a mixed crew, but strapping fine lads, all of them; and we had a Yankee gunner and bo's'n that we'd picked up on the beach at Wang-Foo-Chow on our second voyage out. He was a deserter from the United States navy, and when he told Tod Beasley that he was a first-class gunner the old man signed him on. We tried him out first on the long six and he was a ripping good shot. Tod made him bo's'n and chief gunner.

I could tell you stories of pirate fights and pursuits from now until closing-up time; but I started out to tell you about Tom Devine and I'll keep right on my course. Homeward-bound from China, we used to cruise around the southern end of Formosa and right straight across the Pacific before the sou'west monsoon; and, by the time we were halfway across and out of the track of the monsoon, we'd most generally strike fair winds the rest of the voyage. When the monsoon wasn't blowing Tod Beasley was fond of running down through the Malay Archipelago and then swinging for the West Coast, with a piping west wind on our tail all the way across. Nine times out of ten you can make the run quicker that way; and, in spite of the Malay pirates, Tod Beasley did it more than once in the three years I sailed with him. Fact of the matter was, we'd just as soon run into a Malay proa filled with heathen murderers as wash down decks. It kept our chief gunner in practice and afforded us all a little gentle relaxation and something to talk about besides the weather. When I say "us" I mean me and the second mate and the gunner, for the old man wouldn't no more mention the word pirate than he'd steal a watch. He had a hatred for the breed that amounted to a religion, and though he never ran from a pirate he thought he could sink—and, in fact, would go out of his way to tackle one—his puritanical conscience wouldn't let him talk about it afterward.

Yes, Tod Beasley was a peculiar man. I think it hurt him to kill a man, even when that man was a howling, bloodthirsty Malay or Chinaman; but it was just nuts to the rest of us, because we were all young and liked the excitement. Tom Devine had come up out of the South Seas about this time, also, and was cruising in Chinese and Malay waters, and we were forever hoping to bump into him.

Who was Tom Devine? Well, nobody appeared to know anything very definite about him. He'd run away to sea, I guess, when he was about fifteen, and that was the last heard of him until he turned up in the Fijis about five years later. He was mate of the Schooner Barbara Mack and Jock Wilson was the skipper. Wilson was a blackbirder, running from the Fijis and the Gilberts to Queensland. He was a hard red devil of a man; and what Tom Devine didn't know about villainy Jock Wilson taught him. They traded and blackbirded around together for several years, and [illegible] Devine developed [illegible] the brawniest, [illegible] big brute of [illegible] be found anywhere. Finally Jock Wilson [illegible] a white man and [illegible] Devine blackmailed [illegible] into a half interest [illegible] Barbara Mack [illegible] of it. Laber [illegible] the way from [illegible] to five hundred [illegible] sterling each [illegible] nies in them days [illegible] young Tom was [illegible] fixed.

Of course [illegible] expect two men [illegible] along for a [illegible] under such [illegible] each suspicious [illegible] other. Finally they [illegible] to close quarters [illegible] and Tom Devine [illegible] Jock Wilson and [illegible] Maori wife [illegible] told it was Jock. [illegible] was in Auckland; [illegible] course, Tom Devine [illegible] to skip out, which [illegible] did—and the next [illegible] of him was six months [illegible]

That was in the early seventies. A former trader named [illegible] Schooner Hebe; and on a night when she was [illegible] at anchor in a cove off one of the Gilberts [illegible] Devine and half a dozen renegades like himself [illegible] off to her in a canoe, climbed aboard, killed all hands up with the hook and sailed away.

That was the real beginning of Tom Devine's piratical career. For upward of ten years he cruised around in the South Seas, raiding trading stations, stealing schooners and transferring their cargoes to the Hebe—he'd changed her name and rigging a dozen times—poaching on pearl fisheries and all the time killing a few people—just to keep his hand in. There wasn't much law in them days and British gunboats was scarcer than they are now. It'd make the gooseflesh come out on you just to hear a quarter of all the outrageous things Tom Devine did. He was a monster of a man—and yet I've heard it said that it would have been hard to find a pleasanter or more affable man out of business hours. He was a tall scoundrel, with black hair and black eyes, and a very winning way about him when he chose to appear respectable. He was the last man you'd take for a bloody-handed pirate that he was.

Finally things got too hot for Tom Devine in the Islands so he sold the Hebe and cleared out for Valparaiso. What with the money he'd made and stolen he was worth upward of a hundred thousand dollars, and could have retired and lived a gentleman's life, but he was still on the sunny side of the forties and he liked the game; so he outfitted a fine brig, armed her like a frigate, gathered a crew of thugs and blackguards and sailed away for the Malay Archipelago and the China Sea, where he did a nice business among the vessels running contraband to the West Coast.

That brings us up to June of '87; but before that Tod Beasley had tired of making all his money by selling the Star of Chile. One bright day he put his pursuing conscience in his pocket, and when he took it out again it looked like two thousand dollars gold. I had an eye open for the main chance in them days and I had a thousand saved up myself; so the upshot of it was that Tod Beasley and me invested our savings in opium and silks and smuggled it through the customs on the West Coast. I knew how sensitive the old man was on the subject of other men's souls, so I fixed the customs officers without consulting him—and he was grateful and paid his half. It was all it was business and the hounds expected us to run across. They wasn't getting any salary to speak of, and such as it was, they got it in Chile dollars—and we greased their palms with the real thing.

We loaded cargo in Amoy five trips in succession, and the old man did all our business with a slant-eyed son of sin by the name of Wong Chu. Wong Chu talked better English than me and you, and was a mighty pleasant man to do business with—for cash. He kept a big store on An-Cho-Hoy Street and many a profitable [illegible]

Digitized by Google

Beasley and I had with him. He always set out a bottle of good wine when we paid over the cash; and, for a Chinaman, he was better than fair in all his dealings with us.

Well, this time in Amoy we'd laid in about twelve thousand dollars' worth of opium and silks. Wong Chu felt so good over the business we'd done with him that he had a coolie lug in half a dozen of champagne, and we were all three gathered around a teakwood table in Wong Chu's back room when there was a knock at the door; and a second later a fine, pleasant, big man, with a black beard and mustache, was looking in at us.

Wong Chu was mighty glad to see the big man and introduced him as his particular friend, Captain Foster. It appeared that Captain Foster had just lost the Barkantine Aurora in a typhoon off the Island of Mindoro and was on his way back to the West Coast to bring out a new vessel that was waiting for him at Callao. He sat down to the wine with us at Wong Chu's invitation; and in the course of the conversation he asked the old man if it would be possible for him to secure passage on the Star of Chile.

Every vessel running to the Islands or the Orient in them days had accommodations for four or five passengers, and the Star of Chile was no exception to the general rule; but it's a mighty mean skipper that won't offer the courtesy of a free passage to another skipper that's down on his luck and lost his ship—and there wasn't a mean bone in Tod Beasley's body. He promptly invited Captain Foster to be his guest on the trip home; and Captain Foster accepted, very much pleased, on condition that our old man would permit him to send a few cases of wine aboard to drink to our mutual health on the voyage to Callao.

It was just growing dusk when Captain Foster came out to the ship in a sampan. Our old man met him at the companion-ladder and received him very heartily. Tod Beasley had quite a grand way with him when he was playing the host—sort of made a man feel that the ship was his and that he was honoring Tod Beasley by just coming aboard. The steward had the old family silver on the cabin table and a fancy dinner all ready to serve; and I never saw a man more disappointed than Tod Beasley when Captain Foster excused himself from appearing at dinner—said he had a violent headache and he guessed he'd retire to his berth.

As we had our clearance papers aboard and the tide serving, we pulled out of Amoy that night; and, with a nice wind two points aft the beam, we romped down Formosa Channel at a good twelve knots.

We had a nice run that night and everything went well until about four bells in the morning watch next day, when the lookout reported two junks five miles ahead. They were about a quarter of a mile apart; and, as the old man saw that we could pass between them very handily, he told me to keep the vessel right on her course.

"They look innocent enough," says the old man, sizing up the junks through his long glass, "and it may be they're only fishermen, though you don't often see two eighty-ton fishermen in the same day. Tell the gunner to load the long six and the howitzers, and if they're looking for trouble we'll bid them the time of day as we breeze by."

We bore down on the junks in smashing style and in five minutes more we would have ramped by. Suddenly the gunner came running aft, holding a twelve-penny nail up under my nose.

"Somebody spiked the long gun, sir," says he very quietly. "That nail was drove down through the touchhole, but I discovered it first thing when I went to load the gun and managed to pull it out with a pair of pincers. The Gatlings are all right, but the two howitzers are spiked hard and fast."

"Don't mention a word of this to any man aboard," says I, "but keep your eyes open and if you see anything suspicious report to me at once. Meantime clear for action and pass out the cutlasses and small arms. Some of those junks can show a pretty turn of speed and if they're pirates we'll soon know it."

We did. We were just abreast the junk on the port bow when suddenly the Star of Chile slackened speed, drove her nose under rather deep and luffed up into the wind, swinging broadside on, with her long gun pointed straight at the starboard junk. A wild screech went up from both junks and the cat was out of the bag. They were pirates; so that Yankee gunner of ours just cut loose with the long gun and chucked a solid shot through the mast of the starboard junk. The mast broke off four feet above the bulwarks and went by the board.

The Star of Chile hung in the wind shivering, and I felt sick at the stomach when I saw the reason. A three-inch manila line lay across our bows and slanting up out of the water, each end fast to one of the junks. They had simply stretched that hawser across our right of way and rounded us up the prettiest in the world. The line was well submerged and gripping the brig under her forefoot, and I saw that it would be necessary to lower a boat and cut it.

However, we didn't have a chance in the world to lower a boat, cut the hawser, get the boat back aboard again and straightened out on our course before one or both of those junks would be alongside or across our bows. The old man saw how things shaped up and knew it was a case of fight; and if ever I felt down it was when I had to go up on the monkey-poop and tell him the howitzers were crippled.

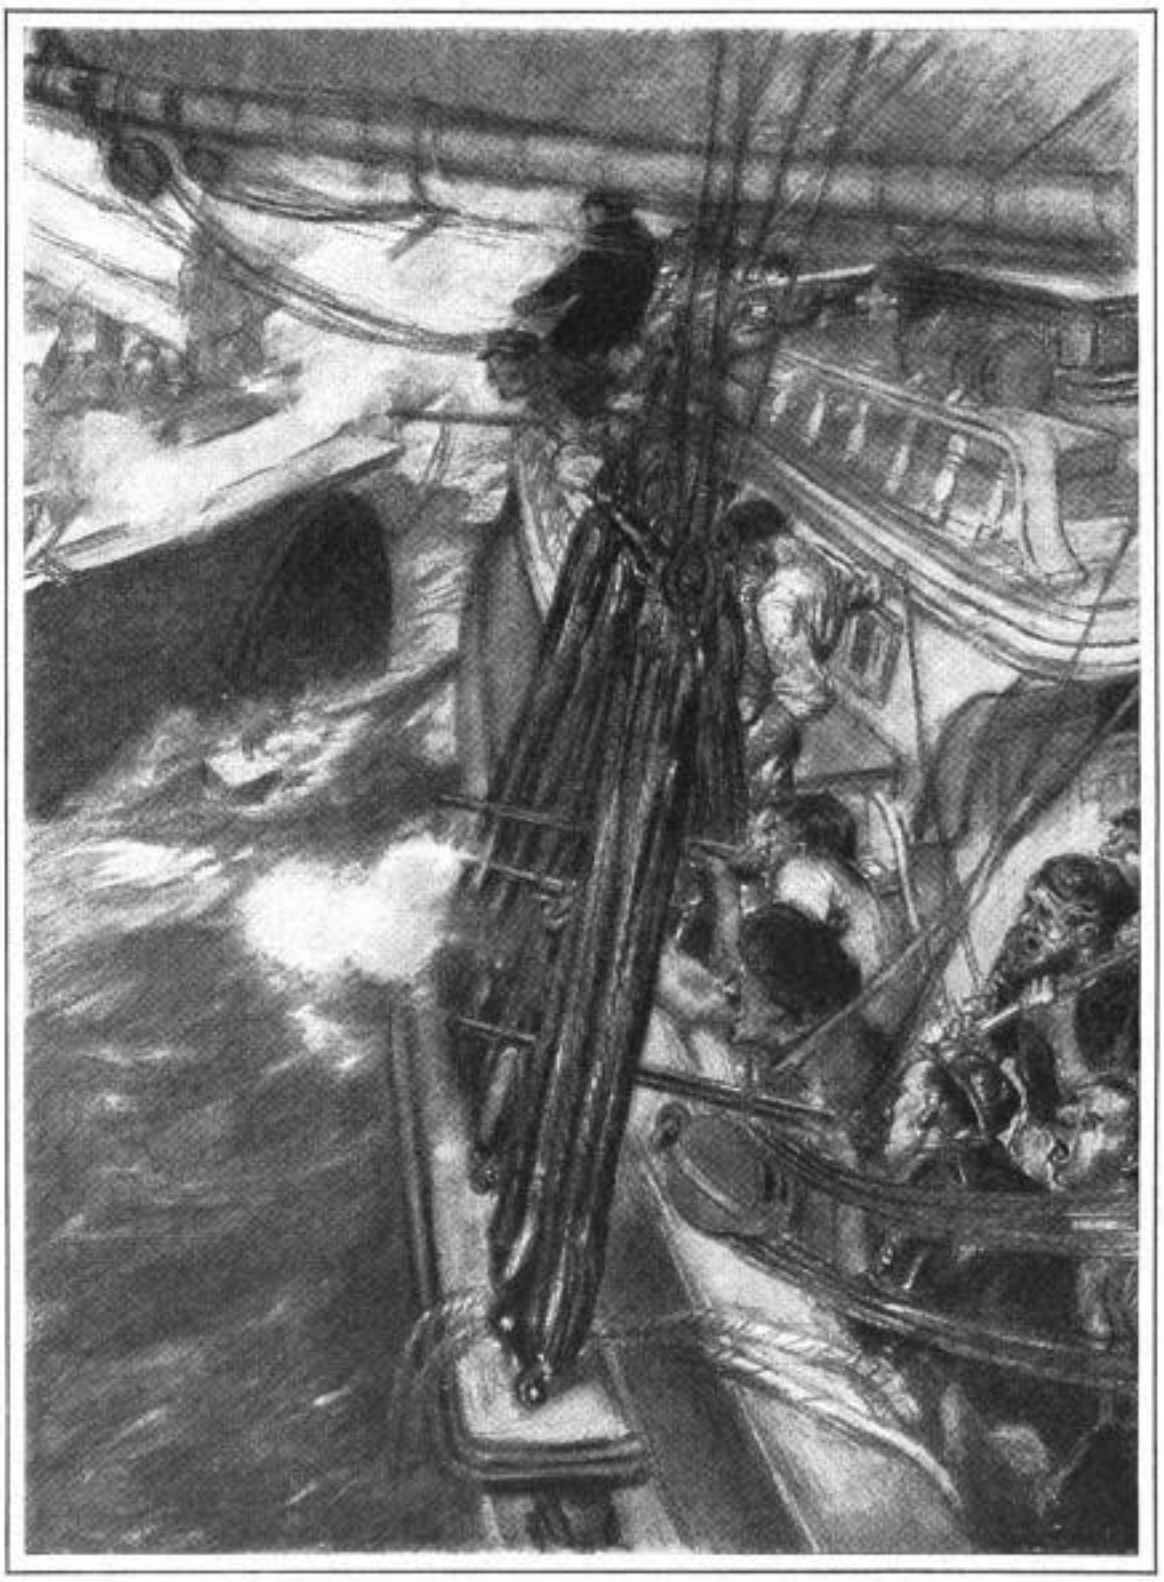
The look of hell came into his face for just as long as you might be saying Jack Robinson, but not a word did he say. When I told him what the gunner had told me he just smiled—a nice, cold, blue-blooded smile—and went below for his pistols.

Meantime the gunner had reloaded the long gun, but the junks had drifted astern and he was unable to train the gun on them again. So he dropped the match he was holding and ran aft to the Gatlings.

It would have done your heart good to see the way those two peaceful junks came to life! The minute they knew they had us snagged hard and fast a hundred coolies swarmed up from below, yelling and chattering like so many monkeys. They were fairly bristling with old horse-pistols, blunderbusses, knives and long, two-handed swords; and the way they shook them at us gave me a cramp in the stomach. I was never in quite such an ugly fix before or since. Anyhow, I was young and I hated to die. Half a dozen of the pirates jumped for their windlasses and began hauling in the slack on that blasted hawser that had snubbed us; and both junks commenced crawling up on us.

Luckily the strain on the hawser swung the brig round long enough for the bo's'n to run back to the long gun and put a shot through the port junk below the waterline. They belayed hauling for a few minutes, but the starboard junk pulled away and the Star of Chile swung round again, the wind helping her, and lay as she was pointed when they snagged her.

The instant after the gunner fired the second shot I heard a curse at my elbow—and there stood Captain Foster with the most surprised look on his face. He paid no attention to me, but faced the starboard junk, removed his hat and wiped his bald head three times with his red-silk handkerchief. Then he turned very carelessly to port and wiped his head three times more—and when he got through I wiped him over the head with the butt of my pistol. He lurched against the rail, hung there a minute and rolled over into the scuppers unconscious.



I wasn't thinking of anything particularly when I hit Captain Foster. I don't think I had any real suspicion against him at the time. I just hit him—a rattling good rap it was—and then stood over him wondering why I'd done it. It was almost a minute before I understood why. It was that surprised look on his face when the long gun went off. Perhaps he thought the pirates fired the first shot; and when he saw the gun go off, when by all the rules of common-sense it shouldn't, he was surprised—and disgusted.

It didn't take me long to find out that I hadn't made a mistake, for a devilish yell went up from both junks and a shower of pistol bullets plunked into the deck all around me. Tod Beasley was standing up on top of the house, and he smiled down at me very kindly.

"That's the good lad, Jack," says he. "Well done! Very well done; but don't stand there looking at him. Scatter aft and turn the Gatlings on the hounds."

That was a fight! It warms me now to think of it. The old man was very cool and walked his monkey-poop as stiff as a ramrod. He always said it was vulgar to get excited when fighting with an inferior race. He was just that way. He loathed Chinamen and pirates, and he wouldn't let on that he was bothering about the outcome. That's what it is to have ancestors! As for me and the second mate and the crew, if we'd ever had any ancestors we'd forgotten about them when we went to sea; so we

"'TATERS"

By Marion Hamilton Carter

ILLUSTRATED BY H. T. DU

So Toddy Carried Off the Schoolhouse for Her and Dumped it on the Plains

GERALDINE GILBERT has got the place to teach Toddy McQueed's school!"

This news ran about the country like blazes. It came to the ranch on horseback—it came in a buckboard—it came in a carriage—it came in a lumber wagon—and it came afoot—which is a rare way for news to reach you in Wyoming. But then it was rare news, and every time it was presented to us we repaid it with the exclamation, "She has!" and got back "She has!" from which you perceive that the appointment was considered extraordinary; any appointment is that can be expatiated upon in two words like that.

It was more than extraordinary—it was momentous. It marked the ending of a community strife that had lasted for two long years. It said that the school committee had come out on top and likewise that Toddy McQueed was downed—"down and out," a few of the less discerning and more optimistic declared. However, those of us who knew old Toddy, sire of Roddy the Irresponsible, doubted the down-and-out part very much and pitied Miss Geraldine Gilbert in advance, prognosticating a hard time for her. The district had been ripped asunder over this appointment and the community at large had been torn up in consequence. People who had been friends for years and years—since before the state became a state—and were at one in everything, from pumpkin pie to politics, found themselves suddenly parted and at enmity over who should teach school that winter at Toddy McQueed's. It wasn't his school or his schoolhouse either; but that was the way Toddy ran things in his part of the county, so that people not in his part of the county found themselves taking sides just for the fun of the thing.

To be sure, the families immediately concerned in the appointment numbered only six; but, in Wyoming, six families can do more next-to-Nature, nose-to-the-wind living than all of Harlem put together. Numbers don't count out there—it's what you are! And Toddy was our bad man—hence the peculiar tang of the news. The important thing was what old Toddy was against the rest of us, and what poor little Miss Gilbert would be against him and his, the wild-eyed Roddy heading the procession—we called her "poor little" Miss Gilbert in those days; and, above all, what Miss Gilbert would be as a successor to Miss Etta Sodergreens, the previous incumbent, who had been ousted in spite of Toddy—also, to spite Toddy.

The former teacher was Toddy's wife's cousin; and naturally she boarded at the McQueeds'. Thus she added the ten dollars a month allowed for the purpose by the district to the McQueed exchequer, thereby keeping any one of the other five families from getting it; and she "worked out" in the house the other ten required. So, when, out of revenge, the other families said she couldn't spell, Toddy got back at them by saying she "could spell as good as anybody wanted who wasn't a darn fool er an effete Easterner tenderfoot." And when they said you couldn't read her writing Toddy retorted that she could sew. And when they said she didn't know arithmetic Toddy declared she could "cook to beat arithmetic all to smash!" The neighbors pointed out with acrimony, however, that she did those things for him—not for them; and by the same token, since he had her domestic virtues—which were all she had—they wouldn't have her at all. The very efficiency through which she became maid-of-all-work and child-nurse in Toddy's family made her an insufferable schoolmistress to the other five. It doesn't always pay to be too feminine. Miss Sodergreens lost a good place as a teacher and Toddy's wife a good servant in the house. But the main thing to all of us was that Toddy had been downed at last! Toddy had never been downed by man or angels, and the event illustrated the triumph of the righteous over the wicked, as you may judge from the name Toddy—changed from Roddy Senior—which was baptismal in that it referred to the contents of the bottle.

And now the district, having triumphed over Toddy in removing his Miss Sodergreens—they spoke of it as "getting rid of her"—was not content to let it go at that and allow him the selection of his wife's second cousin, who was looking for a job—and he was willing to accept her as a peace offering. No—it salted his wounds by a teacher of its own selection, Miss Geraldine Gilbert, who was small, who was thin—Miss Sodergreens had been opulent of flesh—who was from Cambridge, Massachusetts, and had fed on lecture courses and symphony concerts; and who was "too much of a lady" to do housework for her board, and therefore paid full board and lived at Newells', where Mrs. Newell actually made seventeen dollars a month out of her—enough to keep the rest of the family. What a revenge!

Toddy swallowed it with outward meekness—after Miss Sodergreens had ceased prodding him to do his duty by her and had gone away—that gave glee to [illegible] looked merely at surfaces; others of us prepared [illegible] poor little Miss Geraldine with our guns if necessary. [illegible] knew her to be a thoughtless young person, because [illegible] such would have undertaken that job at all.

"Potatoes. Spell it, Jim"

The hall of learning was a log cabin with a dirt roof, had four windows and a front door; and a stovepipe [illegible] to stand attention on the roof, but failed because of a forty-miles-an-hour wind that prevented anything [illegible] rooted in the rocks from keeping the perpendicular in the vicinity. Fortunately the logs were chinked with [illegible] instead of mud. No less a person than Toddy himself [illegible] vetoed mud and voted for plaster—regardless of expense—when the schoolhouse was built, because mud chinking is apt to return precipitately to the earth whence it came, and a peek-a-boo construction calls for more chinking [illegible] the inhabitants. With seven children mud chinking makes quite a difference in the number of red sweaters needed to go through the winter.

Inside, the school showed a desk for the teacher [illegible] plank seats and desks for the pupils, a blackboard, a [illegible] map and some books; but outside—the real thing, after all, lay outside—millions of miles of it—the glory of the teaching job was the situation of the schoolhouse!

As an imminent background, lofty pines splotched [illegible] behind it, trying to see which should first tap the heavens rocks and prick the sky. The schoolyard was precisely where you chose to set your bounds—there was no fence in sight—and the glorious plains rose away and away in a foreground that grew bluer and mistier until it turned to purple velvet in soldiers' mountains forty miles off. You could end your schoolyard there if you had a mind to, for there wasn't a [illegible] raised barrier in sight to say you nay. Thousands of wild horses cavorted on the plains; tens of thousands of cattle grazed there and came to the school in bunches of hundreds to moo at the teacher if they didn't [illegible] her; the white chrysanthemum rumps of antelope could be seen from the school door distantly gleaming in the cool sun of the ranges; wildcats prowled in the [illegible] yard woods—there were no rear windows, so you could see them prowling while you taught; and at night the coyotes barked and the wolves howled. I could help thinking how picturesque Miss Geraldine would find it—after Cambridge, Massachusetts.

If Miss Geraldine, on first beholding her schoolhouse, had any queer feelings she did not tell them: she said the place was "simply lovely and too sweet for anything!" and that all her dear pupils were "simply lovely and too sweet for anything!" Miss Geraldine [illegible] made her start that way because Mrs. Newell had to the moment she got off the buckboard that brought her across the plains, regaled her with the Sodergreens [illegible] and how she—Geraldine—was the last bitter drop in Toddy McQueed's overflowing cup. And, as the [illegible] fided to me later, "mere wisdom prompted" her to smooth things over and "make them simply lovely and too sweet for anything, no matter what they [illegible]

Digitized by Google

So, with the exercise of "mere wisdom," Miss Geraldine entered upon her duties Monday morning, under a Wyoming-blue sky that seemed as much inside as outside; met the twelve offspring of the vanquishers as though they were "simply lovely and too sweet for anything"; met the six pertaining to Toddy as though they were "simply lovely and too sweet for anything"—in fact, met the whole world that way. And the only alarming thing that happened—in spite of our prognostications—was that all twelve thought her "simply lovely and too sweet for anything," though Toddy's six tried their very best and hardest not to think it for their father's sake; and none of them succeeded more than just tolerably so-so, except Jim—in which you glimpse the real tragedy for Toddy in Miss Geraldine's appointment.

Jim stood firm against the female wiles of a person who was young and pretty; who thought everybody so very lovely, regardless, and who wore the best dress he'd ever seen in his life. As a dresser Miss Geraldine, at common every-day, had Miss Sodergreens beaten at her party best, and Jim was forced to acknowledge it; but then—dress isn't everything. And Jim was a man. He was as tall as she was—he was "as good as she was any day, and then some"; next to Roddy he could "bust a bronco better'n anybody in the whole county—she couldn't bust a ole cow, she couldn't—not her!" He could shoot a wolf on the fly—"she couldn't shoot a barn door from a dead rest, not ef y' loaded her gun fer her an' helped her fire it off—she couldn't!" And he "didn't care a flip of a twenty-two caliber cartridge fer all the wildcats in the woods back of the school—he'd as lief as not slap one in the jaw if he happened to feel like it an' saw that ole growly one a-hidin' in that there big crack between them there two big rocks"—she "wouldn't dare to slap a loose wildcat—ner one in a cage—slap it in the jaw, ner anywheres else. Catch her doin' it!"

Yes, Jim was a brave man and all of fourteen; and he was bound to remember that, next to Roddy, he was his father's hope and pride. Roddy had graduated from the Third Reader years and years ago—four at least—and he was now attending the School of the Ranges, where not printed words but letters count—and go about on the hoof.

Yet, in spite of Jim, and with the continued exercise of "mere wisdom" in the temple of learning for two sky-blue weeks, things grew more sweet and lovely until they bid fair to go straight to Heaven and take Miss Geraldine and all her school along—even Jim; and then they all came back to earth in a single word. The word was potatoes.

To be exact, the sky-blue weeks wanted fifteen minutes of completion by the clock. The Third Reader Spelling Class was reciting—beautifully, almost tumultuously, because the spelling class was happy—spelling simple bread-and-butter words, of course, but with such a wrestling-Jacob spirit that Miss Geraldine saw in the present blessing of double l's in "jelly" and single t in "water" a near-future blessing of words like peregrination, conscientious, mignonette, communicate, hypothecate and Kamchatka—the words that earnest little children really love to deal in. Responding to their enthusiasm she enunciated "po-ta-toes" very distinctly, so every child in the room could hear, and called on Jim McQueed to spell it.

Jim rose.

"T-a-t-e-r-s," he recited with distinct enunciation.

Miss Geraldine smiled indulgently and told him he hadn't got it quite right that time, and encouraged him:

"Now—po-tatoes. Try it again."

Jim, who had sat down, got up. "T-a, ta—t-e-r-s, ters—'taters," he recited with calm assurance, and sat down again.

Miss Geraldine was seen to close her eyes for two whole seconds. It felt like two whole hours and the room went still as death. When Miss Geraldine opened her eyes they were on Jim. He hadn't expected to have them that way—he thought they'd come out somewhere else—and the "funny feelings" ran down his spine. Still, he returned the eyes with his own and tiddled a tune with his fingers on his share of the plank that desked four joyful wretches with raised hands, anxious to prove to the world that the great Jim was wrong. And his fingers said to the world that he didn't care a tiddle-de-dee what anybody thought about his being right or wrong—that's all!

"Not quite right—yet," she said smoothly. "Now, dear, we'll try that word again and get it right." Think of calling a boy "dear," who's just as tall as you are and just as good as you are and saying "we" besides! "Please listen carefully!" And she emitted a series of little puffs from between her lips—"P-p-p-p-p"—only they weren't quite the letter P in its nakedness, but a sort of dimity-clad P, suggesting a real live letter underneath. Then, very distinctly, she said the whole word: "Po-ta-toes. Spell it now. I'm sure we'll get it right this time."

The immensely strained attention in the room went off with a crack, and then back to attention-hear-a-pin-drop again. All the little girls thought she was the very sweetest teacher in the whole world; all the boys thought "She ought to lick him!" What Jim thought may be inferred from the fact that she had to repeat her invitation to the treat of spelling potatoes after it had been puffed into his ears like a little automobile.

"T-a-t-e-r-s, 'taters!" Jim shot off, and sat down.

"Po—po-ta-toes, potatoes," corrected Miss Geraldine.

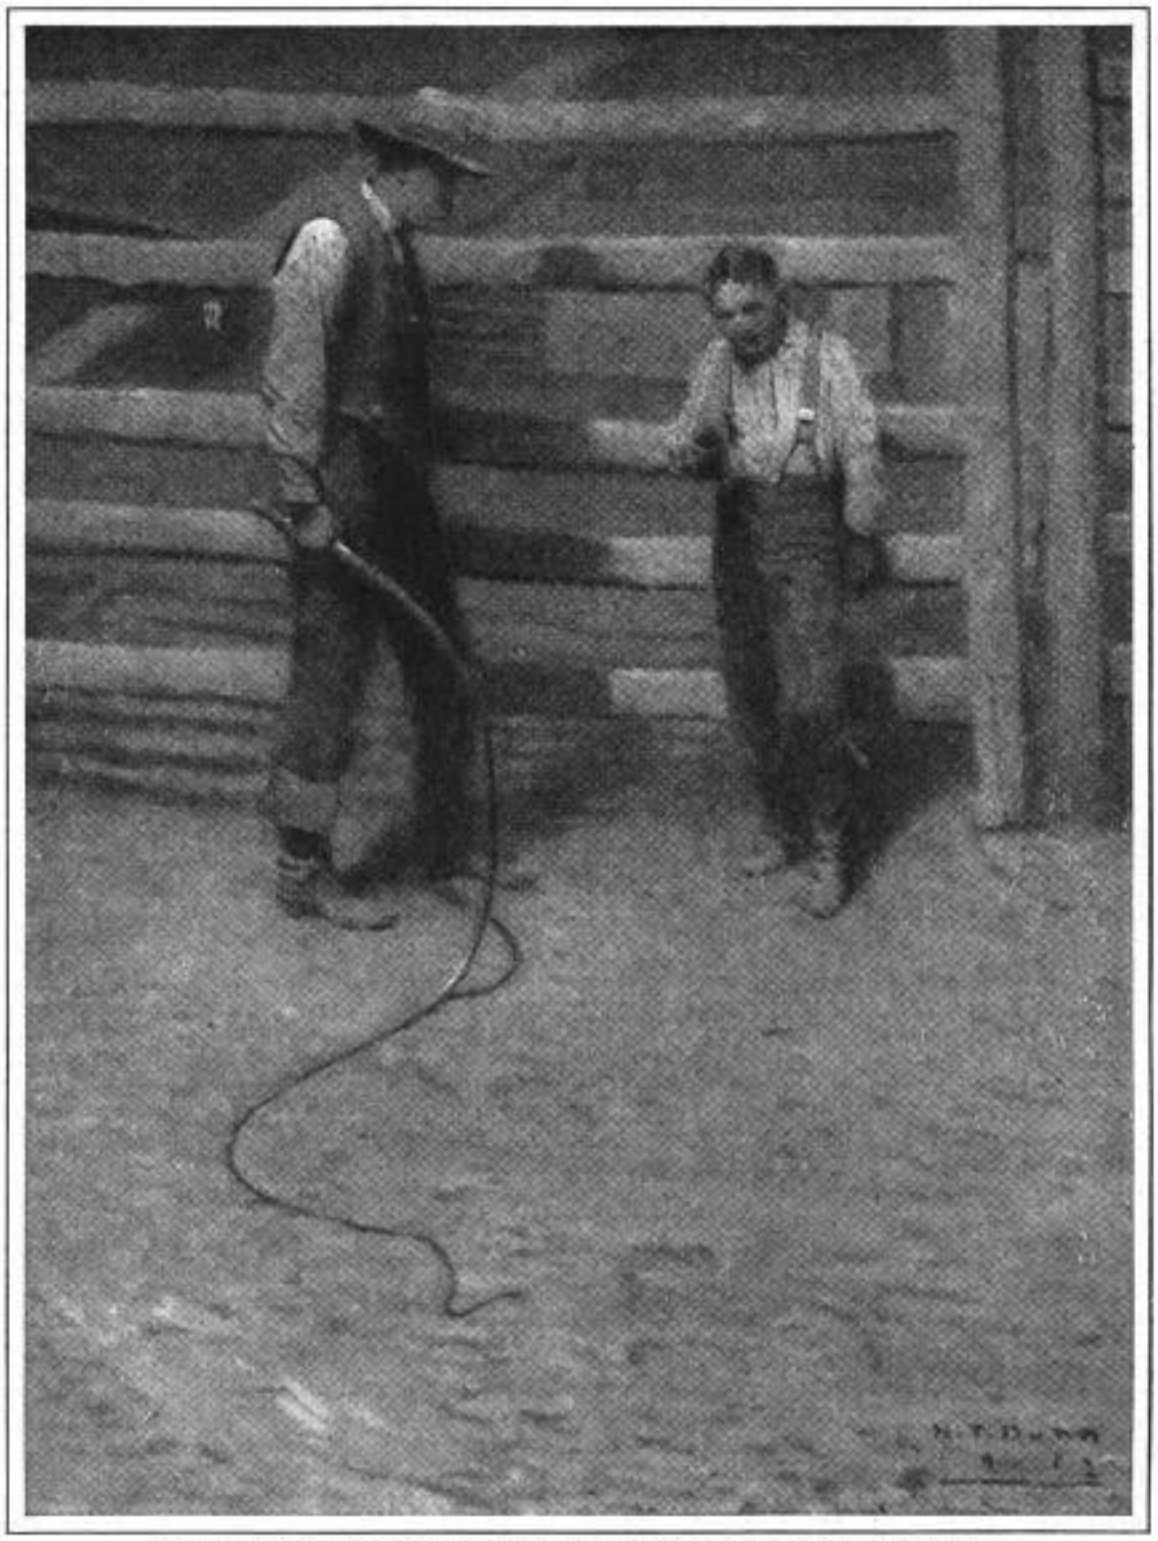
"T-a-t-e-r-s, 'taters!" retorted Jim. This time he didn't trouble himself to rise—just slung it at her head.

The room gasped aloud over the indignity thus put upon dear teacher. Most of the little girls, among them two of Jim's sisters, were ready to shed tears; all the boys were ready to "lick him for her" had she given them so much as the tail-of-an-eye encouragement; but she didn't—her eyes were all for Jim. She was about to pronounce her word again when suddenly "mere wisdom" prompted her to ask him:

"Why do you spell potatoes with a t instead of a p?"

Heavy silence, amid which Jim rose without being asked.

"Because—my father says—that t is right!" And Jim sat down, plop, with the holy look that comes on a boy's face when he has "done" the teacher whom he should revere, and knows his father backs him in the derision of her.



"Oh—very well!" said Miss Geraldine with an offhand grace that belittled the victory of t over p. "I see—now." And there was that in her words and her tone and her look that nobody there present could explain. What did she see now?

What she did see on the instant was that she'd better dismiss school immediately and go home and think things over before committing any follies in the management of Jim that should turn the sky-blue weeks to come into Wyoming cyclones. For it is a serious thing to tell a trusting child that his father is wrong, even in so small a matter as spelling potatoes with a t; and "mere wisdom"—or possibly it was mere feminine intuition and the challenge in Jim's eyes—told Miss Geraldine that she had a situation on her hands; in short, that the rivalry between t and p in the spelling of potatoes might not only disorganize her school, but disrupt the community, already stirred to the roots by her appointment. Men have come to blows on less important things than t's and p's.

On Monday, five minutes before closing, then, this colloquy took place: "Potatoes. Spell it, Jim." "T-a-t-e-r-s." "Why do you spell it with a t?" "Because my father says t is right." "Oh—very well!" Jim sits down and school is dismissed. And on Tuesday, Wednesday, Thursday and Friday, at just five minutes before closing, the same colloquy took place and school was dismissed. And each time precisely those same words and those same tones were used and no others—both sides seemed to feel it a point of honor that there should be no others.

However, in justice to the acumen of the contending parties—and to the whole school—it must be said that neither party viewed this brief and repeated colloquy as the sign of weakness and indecision in the other. All felt it as a challenge; it concealed dark meanings and a sudden surprise—for somebody. The inner atmosphere became electric—it seemed as if school only kept and waded through the hours to reach those few charged words passing between a beloved teacher and a boy as tall as she was and very, very wicked. And what actually happened was this—by Friday, Jim, the hardy, had begun to shake in his boots. For to command your son to flout the dictionary is something worse than telling him to fly in the face of Providence. Providence may be won over by faith and prayer; but with the dictionary you must take it as it is or have the world against you.

And this was the astonishing fact of things-as-they-are that Miss Geraldine had artfully forced Jim to discover for himself. She hadn't told him he couldn't stand out against society and its idols of the page—and stand alone; she

"Jim, I'm A-goin' fer t' L'arn Y', Oncet for All, That Y' Spell 'Taters With a T!"

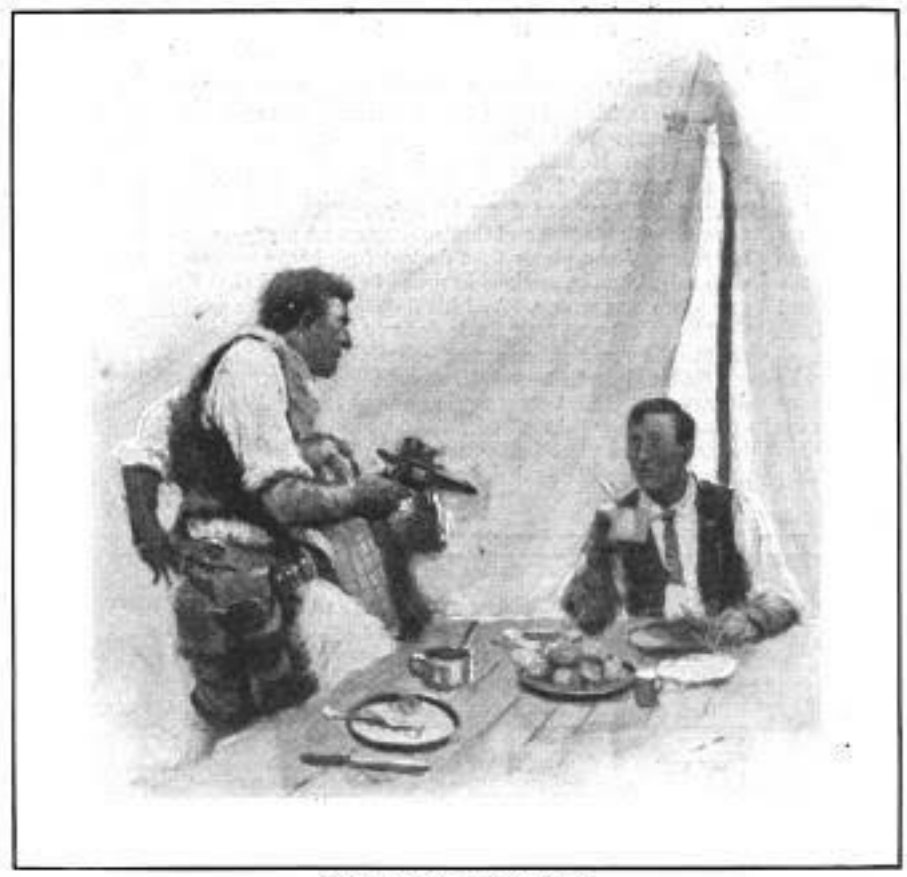
Digitized by Google

hadn't even hinted he was flouting the hallowed work of centuries—or flouting anything, for the matter of that; she'd just asked "Why?" gravely, and followed his answer with "Oh—very well!" in a tone that said nothing and let you suspect everything. And by Tuesday every one of the twelve and two of Toddy's children had told Jim he was wrong; by Wednesday they had severally and collectively showed him with dirty, accusing fingers that he was wrong and proved it by the book; by Thursday he stood abashed before his mates in the magnitude of his wrongness; and by Friday he discovered that Miss Geraldine was secretly deriding him, holding him up to ridicule and snapping her fingers in his father's face.

Which she was.

And by Saturday the news of this subtle warfare went about the country like blazes; and on Monday night, when the mail stage had distributed it at "the store," "'taters" was the joke of three hundred square miles of mostly sage-brush territory; but Miss Geraldine went right on—"po-ta-toes. Spell it, Jim"—as unconcernedly as though she were not making history in Wyoming.

Quite suddenly the joke assumed a social significance; instead of asking "How are you?" it was: "How do you spell potatoes?" And according as you said p or t you showed where you stood. If you said t you sided with Toddy and all the McQueeds, which meant, among other things, eleven cowpunchers and four grub-line-riders; besides all the rest of the friends of the McQueeds and the friends of their friends—and the number was large.



Don't imagine because Toddy was a bad man he didn't have friends in this community. Every man has friends but the truly good man, and he friends it with the angels and doesn't care. The only difference between the bad man's friends and the common wicked one's friends is that the bad man's friends don't always think it best to say so openly. But potatoes with a t changed all that in our part of the state—Toddy's friends could no longer stand before us, hidden under pretended ignorance of Toddy's doings, and smoothly parry: "Well, reelly now, I warn't down to Rock River when Toddy shipped them horses to Omaha; but I don't guess they was any of your horses in the bunch—I don't guess Toddy would make a mistake like that." No. Toddy's friends had to come out boldly in defense of the honor of the house of McQueed and say: "I spell 'taters with a t."

If you spelled potatoes with a p, however, then you went with "the conservative element"—you "stood in with the money power"—you were "in league with Standard Oil to crush the workingman!" It came to that almost before we knew it—crushing the workingman. The line between t and p on potatoes sorted the sheep from the goats in a plain, old-fashioned, with-or-against, hell-or-Heaven manner that made you show your colors and take things by hunks.

Miss Geraldine and her followers, armed with the dictionary, stood firm for p on potatoes, regardless of aspersions and dark hints that Standard Oil was using this means to downtread the noble workingman, who was "just as good as they were." Toddy, armed with his spite against Miss Geraldine, which was impressive in its magnitude, and his wife's desire for a good servant in the house, who paid ten dollars a month board to boot, stood firm also.

Not counting noses, but summing up by what you are, the relative strengths of the contending sides appeared precisely equal, and the deadlock might have continued to this day had not Jim begun to weaken. Was his father sure that 'taters was always spelled with a t? Yes—his father was absolutely sure; and just let him catch one of his children even thinking that it wasn't—that's all!

Yet, in spite of Toddy's being the Big Say-So for the end of the county, he saw things going against him—the joke was getting to be a little too much for even the big man to handle. Toddy was a person who expected the world to take him seriously. All bad men are that way in next-to-Nature communities—it's part of how they make a living; and now the 'taters joke was running away like a colt that is a little too much horse. It had been running away in his own family for some time with the girls, though girls don't count in the matter of moral support and Toddy was thus able to ignore them; but when Jim began to question the advisability of using t at all times with potatoes Toddy saw he must do something more than swear around the house at little Annie—he must end the controversy at a single blow, and once for all have potatoes with a t. So he bearded the lion in her den—that is, he went in person to Miss Geraldine's school. He thought himself a lion also.

"No—I Don't Eat 'Taters"

"Teacher!" he roared, stalking in unexpectedly upon her.

She jumped. She thought it was one of the longhorn bulls from the range—bulls are like that often in Wyoming if you leave the school door open.

"Teacher!" he roared again, gratified with his first success and not troubling himself about "Good morning" or polite greetings that might make her think he had some respect for her when he'd come to show her that he hadn't. Instead he shook his bony finger in her face. "I understand you air l'arnin' my children—my children—mine"—he stopped to let her take the pronoun in, as if the rest of the children were only fit to be swept out with a broom; and when he thought she had he resumed—"that you air l'arnin' my children to spell the good, old-fashioned word 'taters with a p!"

He brought the letter out with a tremendous snort and waited, glaring, to see what she had to say to that!

Well, she hadn't much. She could have said "Shoo!" to a bull—she'd done it often and often; but this bony, big, bad man had scared her out of her wits. Still, she managed to stammer at him somehow:

"It's th-that way in the d-dictionary."

"The dictionary be hanged!" is what he said.

For answer she took her dictionary from her desk. It opened naturally at the page by this time; below the word was the black residue of many accusing fingers. She mutely showed it to him.

He looked and snorted; looked again and snorted louder; cleared his throat and then fumed at her:

"It warn't thataway when I went to school—no, sirree, it warn't! That good, old-fashioned word—word that wuz good enough fer my father—an' fer my father's father afore him—'taters—hez been changed sence I wuz a boy an' went to school!"

She managed to suggest "Perhaps ——" in the hope of mollifying him; but he wasn't there to take any perhapses from her, and before she could get out what she had to say he thundered in her face:

"As you got it in that there book the word is wrong!"

His fist came down on her desk and he took another glare about the room for the benefit of his son and in order to repeat to him, in the presence of witnesses, "The word—in this here book—is wrong!" A bang on the desk to prove it. And with that he snatched up her pen and thrust it between her fingers.

"Change it!" he laconically commanded.

"Change what?" she gasped, turning pale.

"Change that there p into a t in that there book!" And he pointed to the pen and then to the inkwell.

Now it's a funny thing about your really timid girls—a violent situation either paralyzes all their functions or it frightens fright clear out of them. It was that way with Miss Geraldine—she was so frightened that all at once she stopped being frightened. Then the blood of three tame generations rose in her against the desecration of a cherished institution and the slaughter of a Perfectly Innocent Word that she was called on, by this brutal man, to make; and—she got mad! Then she became as cool as a cucumber—didn't care what anybody told her to do—tossed up her head and her nose along with it. The children said she "turned up her nose at old Toddy McQueed!" And they were perfectly delighted, for they'd been cowering in their places, not daring to call their souls their own; but their knowledge of anatomy and physiology was imperfect. And he was still pointing at the ink-well, thinking she was going to do as he told her to, when she flung this at him:

"You"—and, mind you, she emphasized the "You" with her tongue in her eyes as well as her nose in the air—"You—may be able—to change a t into a T—on the side of a steer; but you can't do it in the dictionary!"

She said it just like that; and every word went through his skin! She hadn't lived at the Newells' all that time for nothing; and in the defense of p against t's she metaphorically dug him in the teeth and stood ready for another whack if he so much as winked at her. And right before his sister, too! What a position for a parent, to say nothing of an autocrat of letters!

Toddy McQueed later admitted that if he hadn't been living in a civilized community he'd have "knocked her down before the whole school, just to show her her place"—she'd upset him so much as that. When he found his wind he asked, in a voice meant to be fierce, but that only succeeded in being husky:

"I wanta know—what you mean"

"You know—what I mean!" persisted the undaunted one, with the subtle significance of tone that made her "Oh—very well!" appalling to Jim. And, before Toddy could think of anything for his side she gave him the slap she'd been waiting her chance for—"Allow me to wish you good afternoon!"—turned her back on him and called out: "Third Reader Spelling Class—attention!"

Attention! Well, rather! The Third Reader was nothing but attention, bung-eyed and gaping, without her having them to it, as was likewise every other class. Such how stimulating to the acquisition of knowledge to be called to attention and recitations by a teacher who turn up her nose at Toddy McQueed and "tell him where to his face!" The children were out of their seats before the words were out of her mouth: "Rise! Forward into

Two seconds later Toddy saw Jim heading the procession of spelling enthusiasts bearing down on the region of the desk. Father and son exchanged a look and Jim's eye answered—by dropping. Toddy did not wait to witness the desertion of his offspring; and the school door slammed just as Miss Geraldine enunciated: "Po-tatoes. Spell it, Jim!" And Jim spelled it with a p.

A victory or not, as you may take it; for that night an irate parent informed a backslidden son:

"Jim, I'm a-goin' fer t' l'arn y', once fer all, that y' say 'taters with a t!"

"I—alwuz knowed that—ever sence the first time y' tole me," stammered Jim, watching the blacksnake lying at his father's bootleg.

"Jest so—y' alwuz knowed it—'cept fer a little while today when y' thought m' back wuz turned an' I couldn't hear what y' said when she ast y' t' spell 'taters!"

Jim mumbled:

"I didn't know—what else ter do—when she asked me—like that—after that ——"

"All the more reason y' should hev stood up for yer father when she ast y' like that—after that: showed y' had some backbone of y' didn't hev no other feelin's." Toddy couldn't have brought himself to say "love for your father," but that was what he meant. "Yes—y' orter stood up fer yer father agin a minx like her an' showed her y' could spell 'taters the way yer father an' wuz right, an' she could go to blazes!—that's what Wall ——" He saw Jim had no answer ready to the impeachment of his loyalty and daring—no excuse for a coward's loss of a unique opportunity.

The fact was, Jim hadn't seen the opportunity knocking at his manhood's doors until his father led him to the door and got the blacksnake. That was the bewildering thing about teacher—she said: "Po-tatoes. Spell it, Jim." And he had spelled "po-tatoes" before he even realized it himself. No real man could tell his father that and no father could possibly understand. So Jim furrowed a right angle with the toe of his boot in the dirt of the corral, marking the sides "her, him an' me," and making his side very long and very deep, to show how both the others depended on him anyway; for while he refused to spell potatoes with a p—or just supposing he should refuse to spell with a t ——! His father seemed to read his very thoughts.

"Wall, Jim, I calculate t' l'arn y' in one lick that y' say 'taters with a t; an' at the same time I calculate t' l'arn

Digitized by Google

what t' do next time she asts y'—er anybody asts y'. Y' spell 'taters—'t-a-t-e-r-s, 'taters. What's good enough fer me is good enough fer my son, I guess—I'll make it so anyhow. Now, Jim, lemme hear y' spell 'taters—an' spell her right!"

It is possible that Toddy's old-fashioned, simplified spelling lesson would have remained in the private archives of the McQueed family had he not, in the endeavor to impress Jim's mind, rather more forcibly impressed Jim's legs and the seat of his overalls; Jim was out of school next day—which hurt him worse than the licking—and when he went back he wasn't able to sit down in comfort. Miss Geraldine called him a "Poor dear!" and let him wash the blackboard for her and praised him for the splendid way he dried it, and then went home and cried over him; thus the story leaked out, with all its brutality, and everybody asked everybody: "What ought to be done to Toddy?" Nobody seemed to know, however; there was a complete lack of precedent in dealing with the situation. Some of the more tender-hearted thought he ought to be shot and settled once for all; yet none of them seemed to feel just like doing it, because—well, for one thing, the justice of the peace in that precinct is a woman and she didn't favor shooting Toddy. So they decided to wait and see what he did next.

. . . . . .

The news of Miss Geraldine's exploit with Toddy came to the ranch on horseback—racing in from the plains—three horses, all on a dead run to see which should get there first! Kinky Larkin and Hank Homans brought it; I forget who the other one was—he was only a boy, who said "Oh, my gosh!" every fifteen seconds while Hank and Kinky breathlessly related how little Gilbert had dared old Toddy to his face and told him, "You may be able to change a P into a T on the side of a steer!"—"she said that, she did; and right before the whole school too! An' old Toddy, he was so flabbergasted at her he fainted dead away—er pret' near fainted—would of fainted, only he got holt on her desk to keep hisself from fallin' on the floor. An' then he went home an' licked it outa Jim—worst one Jim ever did git off th' old man—bet he'll remember it long as he lives, an' then some. Yes, sir—that little bunch o' calico told old Toddy he was a brand-doctor to his face!"

Now the fact is every one of us knew old Toddy could do just that on the side of a steer—he and Roddy were the most notorious "hair artists" in the county—but none of us had cared to mention the accomplishment to Toddy. One doesn't, you know, out there. Many things are better left unsaid unless you perpetually carry a gun, and even then it depends. Yet here little Gilbert, with no gun at all and only the tongue in her head, had tossed this off at the villain of the piece! Of course she instantly became a heroine—she could have married half the range if she'd only tossed her handkerchief in the right direction; but, instead of taking advantage of her popularity to do it and get herself well settled in woman's only business, she kept right on at her desk and her "po-tatoes. Spell it, Jim!" without seeming to suspect she was a heroine at all!

. . . . . .

In its youthful period the joke had merely accentuated social barriers—dumped you in with grub-line-riders or made you club together with monopolists; but, after Miss Geraldine's famous mot about P and T and the side of a steer, the word 'taters began to accumulate dark meanings and sinister suggestions—to look a man in the eye and say 'taters to him was tantamount to calling him a rustler; and to mention potatoes in general company was as likely to lead to consequences as the subject of religion at a New York reception. And then, all in a swoop, you couldn't say 'taters at all!

The event that brought about this surprising *dénouement* occurred at the fall round-up on the plains, down at Seven-Mile Springs. One of the young cowpunchers merely remarked in an offhand way at feedtime: "No—I don't eat 'taters," and Roddy McQueed drew on him and told him he'd "l'arn him not to call names an' not set himself up!"

"An' ef it hadn't been fer me," Kinky Larkin boasted afterward, "I bet that young chap wouldn't have et anything else—I yanked Rod's gun 'fore he could shoot, an' I give the boy a chanceet t' explain."

The boy was from up Medicine Bow way and 'taters were still 'taters there. He explained—he declared he hadn't meant a blessed, "goldarned" thing but that he didn't—eat—'taters! "What in thunderation else could a man mean?"

Roddy snorted an acceptance of the apology; but, as he had interpreted that humble attempt at pleasing dinner-table conversation, the boy said, plain as anything: "I ain't got no use fer brand-doctors!" with a self-righteous accent on the I, maddening to a proud soul like Roddy's. And who the blankety-blank was this Medicine Bow kid anyway? A nobody. So Roddy showed him where he belonged in the scale of things in general by shouting instead of shooting at him:

"All right—if y' didn't mean anything; but don't you say 'taters again—that's all."

Even Roddy's friends among the boys were aghast. Not say 'taters? What was the world coming to anyway?

Kinky put it to him straight: "Gee-whiz, Rod—whatcher givin' us! We dassen't even say 'taters?"

"Ner per-taters?" chipped in Beany Johnson.

"Ner po-ta-toes?" minced Hank Homans, in imitation of a manner already famous, insultingly famous to Roddy. "Not p-p-p-po—t-t-t-ta—t-t-t-toes—po-ta-toes?"

Hank came from the McQueed district—his little brother was one of the "twelve"; and Hank had the story at his tongue's end, with embellishments of his own.

Roddy scowled—and if scowls could kill, Hank would have lain there dead; but, with Kinky in possession of Roddy's "arguer"—Roddy was in the habit of yelling at folks, "Here is my NO!" and firing it out of his gun—the bird of American freedom flew without fear. A dozen of the boys chorused at once: "My gosh!"—and some other words. "This here's a free country—ain't it? Well, I guess! A man can say what he pleases—can't he? Can't he? Can't he?"

Those barbed questions were shot at Roddy's face; and, to show you what real courage the fellow had under all his brag, though he sat there gunless among them he flung back in their teeth: "No—he can't—not while I'm round!"

THE APPLE OF DISCORD

By HENRY C. ROWLAND

ILLUSTRATED BY WILL FOSTER

V

AFTER Lanier had left her, Clare O'Sullivan slowly gathered together her painting things and dropped them listlessly into the box. Then, stepping back, she stood for a full two minutes staring at the sketch on the easel. It seemed to the girl as if the artist had painted a portrait of himself. In the sweet, strong harmony, the perfect values, the minor tones, and a certain hint of melancholy that was soothing rather than depressing, she seemed to see Lanier's calm, thoughtful expression, the clear, direct gaze of the elusively colored eyes between their sweeping black lashes, while the accent of the waves splashing against the curved beach of the little cove below suggested his vibrant, soothing voice. A band of sunlight struggling through the low, pigeon-gray clouds to strike the sea near the horizon suggested the smile that so lightened his face. But above all it was the atmosphere of absolute sureness which characterized the whole sketch that vaguely impressed Clare as most suggestive of the artist. She wondered if he were ever in doubt. Could she have seen his face when at the piano, working out some elusive scheme; seen the expressions of uncertainty, pleasure, impatience and disgust that were constantly sweeping over it, she would have realized that her sketch represented but one of many facets, and that Lanier would have been more truthfully depicted by what the painters call chiarescuro.

Clare, having finished her contemplation of the sketch, placed it carefully in a holder, and loading herself with her equipment started slowly for the house. The O'Sullivans' summer place consisted of an attractive-looking bungalow, modest in size, with a stable in the rear and a boathouse at the foot of the cliffs in one of the numerous little coves that eroded the seafront. In the loft of the stable Clare had fitted up a small but practical studio, where she was wont to work on rainy days or when at odds with a monotonous world. Lanier had been a little severe in his criticism of the girl's sketch. Her work was really full of promise, for she scorned all tricks of technic, had an excellent sense of color and composition, and drew far better than many of those who had already "arrived."

"I'm Sorry," He Said Evenly, "But We Really Have Nothing More to Say to Each Other. Besides, You Are Still Married"

On the way to the studio she came upon her brother, who was sitting bareheaded in the sun stitching a split sail.

"Let's see your sketch," said he, laying down palm and needle and scrambling to his feet. Ravenel painted rather better than Clare, but confined himself to figures and portraits—principally Mrs. Wilmerding's.

Clare threw him a malicious look. "Come on up," said she.

Ravenel followed her to the studio. Clare took out Lanier's sketch and placed it on the easel. Lanier's inscription was scarcely more than visible, but to hide it altogether Clare placed in front of the panel a frame a size too small.

"Oh, I say!" cried Ravenel. "That is good! Why, Sis, it's a corker! How did you do it? By George, if you can get that on a big canvas you'll make the Academy sit up!"

He took his pipe out of his mouth, stared at his sister, then stepped closer. Clare laughed.

"See how you like it without the frame," said she, and removed the frame, which she had been steadying with her hand.

"Even better. Hello, what's this—what—is—this?" He leaned over and read slowly—"Painted for Clare by Calvert Lanier."

Ravenel stepped back and stared at his sister with his mouth open. He was a lithe, handsome fellow, purely Celtic of type, and might have posed for a young blade in one of Charles Lever's romances.

"What's the meaning of this?" he asked curtly. "Do you know Lanier?"

"He came along the cliffs when I was making a mud pie and finished the sketch for me. I asked him to sign it."

"Along the cliffs? Our cliffs? Well, of all the cheek! What was he doing up there?"

"He was going to see Loretta Wilmerding."

"Going to see Loretta? Why, confound him, what business has he going to see Loretta?" Ravenel's handsome face darkened.

"Why shouldn't he?" demanded Clare impatiently. "This place isn't entirely a penal colony. A man doesn't have to get permission from the warden to call on an inmate."

"Humph!" Ravenel shoved his pipe back into his mouth and drew at it violently, regarding his sister with

Digitized by Google

suspicion. Clare's cheeks were red and her telltale eyes beginning to darken, as they always did when she was under excitement. "Well, then, supposing that he did have the nerve to call on Mrs. Wilmerding, what license had he to stop and give you a paint lesson?"

"I asked him to."

"Did you know who he was?"

"Of course not. If I had, I shouldn't have been so cheeky as to ask him to sign the sketch. I'm not in the habit of accepting handsome presents from strange young men. You know we saw in the paper the other day that some of his sketches went for five hundred apiece in a public sale."

Ravenel pulled at his pipe and scowled.

"You mustn't take it," said he.

"Indeed I will."

"No, you won't. I'm not going to have my sister under obligation to a nervy playwright—especially after the way he's made bums of our crowd here. You send it back."

"I'll do nothing of the sort," cried Clare defiantly.

"Then paint out his beastly name."

"That would be a nice, honorable thing to do after asking him to sign it!"

"Just the same, you paint it out," said Ravenel stubbornly. "I'm not going to have my sister—and look here, 'Painted for Clare!' Why, hang his impudence, what business has he got to call you Clare?"

"Oh, shut up, Ravenel," said Clare disgustedly. "A stray artist you meet on the cliffs doesn't have to observe Chesterfieldian etiquette. I told him my name was Clare."

"The deuce you did!" snapped Ravenel. "My word, but you seem to have been going some, Sis. I don't like it. I've got no use for it! I hate it!"

"Of course you do," said Clare coolly. "And if I hadn't told you that he was bound for Loretta's you'd never have said a word. You're the one that had better keep an eye out for squalls, Ravel, my boy ——"

"Nonsense!" Ravenel's dark face darkened even more. "Don't start on that."

"Then leave me and my picture alone. I'm sorry I showed it to you."

"Paint out the name and I'll say nothing more," said Ravenel doggedly.

"Ravel, don't be silly!" cried Clare, and added most injudiciously—"or if you must be silly, save your silliness for Loretta."

Ravenel's quick temper flamed up. He stepped forward, picked up a brush and turned to the easel. Clare, seeing his evident intention, flung herself between. Ravenel swept her aside with a backward motion of his long arm.

"Ravel, stop! Stop!" cried Clare furiously. "The picture is mine! Don't you dare touch that dedication. It's mine! I—I paid for it!"

Ravenel turned and stared.

"How did you pay for it?" he demanded sullenly.

Clare, suddenly realizing her mistake, bit her red lip.

"Never mind," she answered in a low voice. "I paid for it—and it's mine." And the crimson color surged into her angry face.

Ravenel's cold gray eyes grew hard as flint. With the brush in his right hand he turned and seized Clare's arm with his left.

"What do you mean?" he demanded so savagely that Clare shrank back. "How did you pay for it?"

Clare's eyes were all black now. But the high color had left her face, and all that remained of it were a pair of very red lips and a crimson spot in either cheek.

"Let go my arm," she said in a very low voice. "You hurt me. If you must know, you brute, I gave him a kiss."

Ravenel loosed his grip.

"Ho!" said he scornfully, "you gave him a kiss, did you? So that was what paid for the picture. You're a lot too free with your kisses, Clare. Now let this be a lesson to you. I was only going to paint out the name, but now ——"

Holding the struggling girl parried with one strong arm, he deliberately began to daub out, first the name, then the whole charming sketch. A single stroke made the damage irreparable, and after this Clare drew back and watched him, dark-eyed and silent. When the whole thing was a mass of pigeon gray she said quietly:

"You had no right to do that, Ravel. If I choose to give a kiss for a picture it's my own affair, and if Mr. Calvert Lanier sees fit to let his pictures go so cheap it's his affair and no harm done to anybody. I'm not a married woman. Now, please go out of my studio—and please go at once!" Clare's low-pitched voice began to come a little breathlessly. She had been holding her wild temper with a tremendous effort, and she could feel it squirming in her grip. Things were getting red, and as she looked at her ruined sketch the blood began to burn the backs of her eyes. Ravenel was watching her with a sort of sulky nervousness. It was a long time since he had seen his sister in one of her tempests, but he remembered the premonitory symptoms and moved toward the door. On the threshold, the knob in his hand, he turned.

"If you'd heard some of the things about this Lanier person — —" he began, when Clare whirled furiously about.

"Be still!" she cried. "Get out of my studio, you domineering brute!"

Her flaming eyes fell on her painting stool. She whipped it up by one leg and hurled it at her brother. Ravenel shut the door barely in time and ran down the stairs. At the foot he paused and listened, and could hear his sister's low, passionate sobbing. The coachman, an old family servant, heard it too. He looked at Ravenel and shook his grizzled head.

"There, Masther Ravel," said he, "yez are at it agen. Will ye nivir grow to be a man and lave poor Miss Clare alone?"

"Oh, dry up!" growled Ravenel, and lounged off.

His conscience troubled him as he strolled along, and the more he thought of it the less pleased he became with his performance. He had only succeeded in making his sister desperately angry and unhappy, and he had destroyed a very charming work of art. Even the consolation of throwing the blame of the whole business on Lanier was denied him. Ravenel reflected that he himself had kissed more than one pretty girl on a very brief acquaintance, and not given a five-hundred-dollar painting for the favor. From all that he had ever heard of Lanier the playwright was a gentleman, and not the person to kiss and tell. Of course it was very wrong of Clare, but——" and Ravenel began to wonder what he could do to make his peace. He loved his sister very dearly, and when they had occasionally quarreled he had usually spent all the money he had for some peace offering.

So it was in rather a humble and contrite mood that he arrived at the Wilmerdings', where with the familiarity of a privileged character he strode across the lawn and up on the veranda, meaning to rap on the window and ask Mrs. Wilmerding to go with him to the reading room for tea. It never occurred to him that Lanier might still be there. His rubber-soled shoes made no noise nor did he hear the murmur of voices from within the house, and the first knowledge that he had of his intrusion was when there presented to his astonished eyes the tableau of the colony's ivory-towered Minerva having her hands kissed by the very individual who had been making such a lot of trouble for everybody in general and himself in particular.

Amazed and furious, Ravenel might have forgotten himself and made a scene, had not Mrs. Wilmerding sent him about his business as though he had been a meddlesome child. As it was, he strode off muttering strong words under his breath, presently to halt on the path, where he waited, hot of heart but mystified. There had been a certain expression to the pose of Mrs. Wilmerding's head as she had stood facing Lanier that disquieted Ravenel, who fancied himself in love with her. To be sure, he had never received any more encouragement than a sort of maternal indulgence admixed with playful banter; but he was a sanguine young man, and his success with the ladies had been considerable.

Ravenel had not long to wait, for presently Mrs. Wilmerding turned a bend in the path and came upon him sitting sulkily on a large stone. Her blue eyes were very bright and there was a red spot in either cheek. Ravenel got up with a frown on his dark, handsome face. His greeting was neither agreeable nor elegant.

"Why was that pup lickin' your hand?" he growled. "Thought you disliked the breed."

"Don't be coarse, Ravel," said she sharply, "or you can go on alone."

"Lanier, wasn't it?"

"Yes."

"Cheeky brute. I've just had an awful row with Clare over him."

Mrs. Wilmerding raised her eyebrows. "About what?"

"This is in confidence." And Ravenel told of his scene with his sister. Mrs. Wilmerding listened with a frown.

"You acted very badly," said she. "So Clare thinks that you are seeing too much of me? I agree with her."

"Oh, come, Loretta!"

"Mrs. Wilmerding," she corrected austerely.

"Loretta," said Ravenel stubbornly, and added with a savage cut to his voice—"See here, why do you persist in treating me as if I were ten years old? I'm a man and you're a woman."

"A married woman. And you are a gentleman, Ravel; although I must say that there are times when one would not think it. Now stop this nonsense immediately!"

Her voice was positive. Ravenel looked at her gloomily.

"Would you let me kiss your hands?" he began.

"No. I wouldn't. So you destroyed Clare's picture? A brotherly act! I suppose she was terribly broken up?"

"She broke up a painting stool against the door of the studio," said Ravenel sullenly.

"Oh, you children! And you complain that I treat you like a boy of ten! You ought to be ashamed of yourself, Ravel."

"I am. So ought you—letting this play person——"

"That will do!" Mrs. Wilmerding's color heightened. She stopped short. "See here, Ravel, you are in no mood to go to the reading room, nor do I feel much like it myself. Let's walk down to the end of the point, and on the way back I'll stop and speak to Clare."

Ravenel's face brightened. "Good!" said he. "I am rather fed up on the reading room."

They turned and began to retrace their steps. Presently Mrs. Wilmerding said:

"My interview with Calvert Lanier rather upset me."

"Should think it might!"

"Oh, hush! Lanier is a fine fellow and has been very badly treated. I want you to help me induce the committee to admit him to the colony."

"What?" Ravenel stared at her, and his lean jaw dropped.

"Precisely. We were really not justified in barring him out. He is not at all the sort of person that I had expected to find him."

"But, good heavens, Loretta, after he's made fools of us with his old barge, and got fresh with Clare, and even had the nerve to make goo-goo eyes at the Pallas Athene of this sterilized Olympus ——"

"Don't be a goose! He's harmless enough, if a little Continental in his manners."

"Decidedly Parisian, I should say," Ravenel answered with a grin. He was beginning to recover his usual good humor. "Did he kiss both paddies?"

"Oh, drop it, child! You are getting positively wearisome! After all, genius is entitled to certain mannerisms, and there is no denying Lanier's genius. It does seem rather dull to banish the brightest mind that we have ever had here, and now that he has apologized for making us a laughing-stock and has offered to go away ——"

"I hope you called his bluff."

"Don't be common, Ravel. I told him to stay on if he wished. My plan now is to offer him the privileges of the colony for this season and let him have his building site for next year. There will not be much opposition, I fancy."

"He will have an enthusiastic sponsor in Dad," said Ravenel. "Since the King's Peg episode, followed by the Champagne Chorus, the governor has been cocking his eye at the hulk and showing strong inclinations to swim out aboard. Then Papa Phelps goes about clucking like a hen with a brood of young ducks, and Professor Pringle asked me if, in sailing aimlessly about, I might not run alongside and exchange his copy of Hippolytus for the Kafusalum of Bezeenorious. This Lanier person has certainly got a strong draft in the Chimney Corner—tanks the first-row constituents and makes 'em sing; then comes weaving ashore and catches and kisses the pretty ones. Oh, what's the use! Let's make him an honorary member and get a few dead-head boxes for the colony!" He looked at his pretty companion and grinned.

"Sometimes, Ravel," said Mrs. Wilmerding pensively, "you make me think that the O'Sullivans came to America in the steerage. But I suppose that it is no more than the cream of Ireland curdled by a course at college. Your father is not like that."

"Father drinks," said Ravenel, "and that always makes an Irishman polite, even to the corpse. Clare, it appears, likes to kiss ——"

"Shame! What do you like to do?"

"I'm ashamed to tell you," said Ravenel, and gave her a laughing look from his bold eyes. Mrs. Wilmerding bit her lip, trying not to smile. Her feeling toward Ravenel was that which one might have to a naughty but rather lovable little boy. Perhaps it was the consciousness of his utter inability ever to move her that had led to an intimacy which would have provoked criticism in any colonist other than Mrs. Wilmerding. There were times when she wanted to spank Ravenel and shut him up in a dark closet.

"Then you'll help me to make Lanier a member?" she asked presently.

"Oh, yes," he answered indifferently. "I'd help you to make Lucifer a member if you really wanted it—and it wouldn't surprise me if you did."

"What do you mean, Impudence?"

"I mean," said Ravenel recklessly, "that nothing you might ever do would surprise me in the least. You understand other people pretty well, but you don't know any more about yourself than does a new aeroplane. You might soar to Heaven—or you might kill the aviator. You've never found yourself, and ——"

"Thank you, that will do. Was there ever any insanity in your family, Ravel?"

"Yes, monomania!" He turned and looked at her, but Mrs. Wilmerding did not catch the look. Her eyes were fastened on a strip of beach at the foot of the cliffs. Ravenel's eyes followed hers.

There, in the shelter of a heap of boulders, was an interesting tableau that might have been entitled Orpheus and Eurydice. The rôle of Orpheus was being admirably rendered by Calvert Lanier, his arms full to overflowing with Eurydice; the latter was charmingly posed by that beautiful young woman, Mrs. Ada Stackpole.

VI

ON LEAVING Mrs. Wilmerding's, Lanier had set out briskly to return to the cove where he had left his boat. He walked rapidly, and just before arriving at the path that led down the side of the cliff, caught sight of

Digitized by Google

several people approaching from the other direction. There was no sense of intrusion on Lanier's part, but he wanted to get back to his work with all due haste, and fearing that one of the party might be of the quartet that had visited him, he turned off to the cliffs and started to pick his way down. The descent was not difficult until he had almost reached the beach, when there was a six-foot jump down into the deep sand. Lanier was as light on his feet as a cat and sprang down without bothering himself so much as to lay his hand on the rim of the ledge, with the result that he barely missed landing in the lap of Mrs. Stackpole, who was tucked under the shelter of the rock with a magazine in her hand and a box of chocolates against her knee.

Mrs. Stackpole did not scream. Her nerves were not of the hair-trigger sort, and consequently she was considered phlegmatic by her women friends. Men saw her differently, not only on account of her splendid beauty, which was of the heroic, Northern type, but also because of a certain strong, sweet, reposeful quality she seemed to diffuse, which was very far from being apathy. Neither was there any hint of coldness, and one felt instinctively that her fires once lighted would not prove any brushwood blaze.

As Lanier dropped lightly into the sand, almost brushing her skirt, Mrs. Stackpole drew back instinctively, less startled than surprised, for she had chosen a secluded nook of the beach to avoid being disturbed, and it was annoying to have a man bounce down from above. But as Lanier, recovering his balance, turned quickly with an apology, she gave a gasp that was almost a scream.

"Calvert!" said she breathlessly.

Lanier had frozen into a light, well-balanced poise that lasted for a second, when he drew back, his eyes narrowed and his face rather pale.

"How do you do, Ada?" said he quietly. "I'm sorry to have disturbed you. I didn't know that you were within a thousand miles of this place."

"And didn't care," she answered as one stating an accepted fact.

"No," he answered gently, "I really didn't care. My disease has been quite cured by Father Time and Mr. Stackpole. I understand that my frantic prophecies of some years ago have at last come to be fulfilled."

He eyed her keenly. "Permit me to congratulate you. I knew that old rip, your husband—you did well to separate."

Mrs. Stackpole looked at him steadily. Her breath was coming in long, deep inspirations, her pretty mouth looked like that of a child who is just about to cry.

"Yes, Calvert, you were right," she answered. "I brought it all on myself."

"And on me," he answered dryly.

"And you were so bitter! Oh, Calvert, how could you have said such things to me in that letter?" Her voice choked and she stopped abruptly, while her blue eyes filled with tears.

"It was rough, I'll admit. But you see, Ada, I was rather young and full of ideals—or, let us say, illusions."

"You are bitter still." She looked at him with a sort of eagerness, and a sudden rush of color came into her face.

"No, I'm no longer bitter. Perhaps it is all for the best. A writer shouldn't marry. If you hadn't jilted me for that old brute I might have made us both more unhappy than we are now. My character is full of kinks."

"We should have been happy, I think," she answered, and looked dreamily out at the sea. "But—oh, well, I was pretty young too, and you were too long away and I got unhappy and resentful, and thought that you must have stopped caring or you wouldn't have stayed on in Paris."

"I was learning my trade."

"I didn't appreciate that. Then Howard Stackpole came along and dazzled me, and—and I married him. That's about all."

"Yes," Lanier agreed, and gave her a keen look—"I fancy that was about all."

Mrs. Stackpole's color deepened. "He made me very unhappy," said she. "I wanted to divorce him, but the family wouldn't hear of it, so we merely separated."

"And now," said Lanier, "your life is over and you have died and gone to Heaven in this colony."

"Yes. You've given us a lot of trouble, Calvert. Perhaps it might interest you to know that I was the one most responsible for having you barred out. It was I who induced Mrs. Wilmerding to repudiate her husband's agreement, and she induced the others."

"Indeed. And why did you do that?"

Mrs. Stackpole had risen to her feet and was facing him. They were about of a height, and her blue eyes looked straight into his dark ones as she answered:

"I thought it wiser, Calvert. I couldn't realize that you might have ceased utterly to care for me."

Lanier looked at her thoughtfully; then a bleak, cheerless smile played round the corners of his fine mouth.

"I should have thought my letter might have made that point clear," he answered. Suddenly the smile, such as it was, faded and his face darkened. "You need not have been afraid, my dear Ada. Your jilting me as you did not only cured my love for you, but also inoculated me very effectively against love as a disease. If it has been a little rough on my heart it's been at least profitable to my head. There is no such thing as love to hamper a career, and I feel that I owe you a lot. I'm sorry for the trouble I made you here. Of course if I'd known that you were behind it all I'd never have come. As it is, I will clear out just as soon as I've finished my work, and in the meantime I'll fight shy of these exclusive precincts. Goodby, Ada."

He raised his hat, holding out one hand. Mrs. Stackpole's hand met the outstretched one and she stood for an instant, looking into his eyes with an intentness that gave her face a strained, almost suffering look. The color had all gone now except for a little spot in either cheek.

"Calvert," she said, "you mustn't leave me like this." The words came thinly, fading entirely away as her eyes searched his face for some sign of softening. Lanier's clear, cleanly cut features were as hard as though chiseled from onyx.

"I'm sorry," he said evenly, "but we really have nothing more to say to each other. Besides, you are still married." He smiled slightly. "Goodby, Ada."

The hint of gentleness in the last few words proved fatal. The tears gushed into the blue eyes and she stepped closer.

"You are right, Calvert. Goodby, goodby. Kiss me goodby, my dear, and tell me again that you forgive me. Then go—and go quickly, Calvert."

She held up her lovely tear-stained face. Touched and half contrite, Lanier drew her to him and kissed her on either cheek. He had but just completed this chivalrous act and was about to turn away when there came a rustle from the top of the cliff. Lanier, glancing up quickly, looked straight into the horrified eyes of Mrs. Wilmerding, while staring over her shoulder was the dark, handsome face of Ravenel O'Sullivan.

The tableau lasted only for a second, the two at the top of the low cliff withdrawing immediately from the brink. Lanier glanced at Mrs. Stackpole, who had stepped back and was staring somberly out across the water. She had not observed Lanier's upward glance and the expression that must have followed it.

"Goodby," he said again. "Goodby, Ada."

"Goodby, Calvert," she answered lifelessly.

Lanier raised his hat and turned away. The tide was out and he was able to pick his way along the beach to where he had left his boat. A few minutes later he was pulling off to the hulk, while Mrs. Wilmerding and Ravenel watched his progress from a little farther along the cliffs than where he had embarked. Mrs. Wilmerding's forehead was gathered in a frown and her combative chin was firmly set. Ravenel watched her with a faintly sardonic smile.

"Now if only he'd fallen in with Willa Davenporte," said he, "this Lothario would have kissed and comforted the four beauties of the colony in less than two hours. Not a bad record that, considering how popular he was."

"He only kissed my hands," snapped Mrs. Wilmerding.

"One hand is all right, but two are equal to one cheek. You got off the easiest; but then, you see, I butted in."

"Ravenel!" *(Continued on Page 48)*

"If You Must Know, You Brute, I Gave Him a Kiss"

THE BUSINESS SIDE OF OPERA

By Pierre V. R. Key

PHOTO. BY WISHIN, NEW YORK

John Brown, Business Controller of the Metropolitan Opera Company

CUTTING a good American dollar into twenty-one parts is no easy financial task. Though it may sound like a prefatory announcement to some feat of legerdemain, the management of the New York Metropolitan Opera House performs it after each of the two hundred and ten-odd performances in a twenty-four weeks' season, with a deftness born of practice.

The business executives of the Philadelphia-Chicago and the Boston Opera Companies, likewise, are dividing the elusive greenback. Less extensive schedules prepared by these organizations minimize the frequency of the monetary division, but every such effort entails the approximate labor that prevails in the office of the New York institution.

Every one of the six dollars paid by the opera habitué for an orchestra seat in the Metropolitan Opera House undergoes a splitting-up process. This is also true of the sixty one-dollar bills that have secured Madam Socially Ambitious her box, and the lone simoleon parted with by the long-huired individual for a square foot of room.

The music-mad enthusiast who imagines he has paid the price of a ticket solely to listen to Caruso's matchless tones is mistaken. Only a mite finds its way into the pay envelope of the great Italian tenor. The rest trickles in a score of other directions; for there are numerous items of expense in opera-giving besides the salaries of famous singers. The holes in the sieve at the bottom of the Metropolitan's cash drawer lead to some seven hundred and fifty persons, native and foreign-born, whose names appear on the payrolls in rigidly classified departments, to say nothing of the corporations and business firms who serve this distinguished opera company. If one were to follow in the wake of money exchanged for a choice seat after it had reached the box-office treasurer its stopping-points and the respective sums lopped off by Business Controller John Brown would tabulate about as follows:

Disbursed		Received	
Artists	$3.10	For one seat	$6.00
Conductors	.22		
Orchestra	.59		
Chorus	.27		
Ballet	.07		
Technical and Scenic	.12		
Wardrobe	.08		
Property	.02		
Carpenters	.08

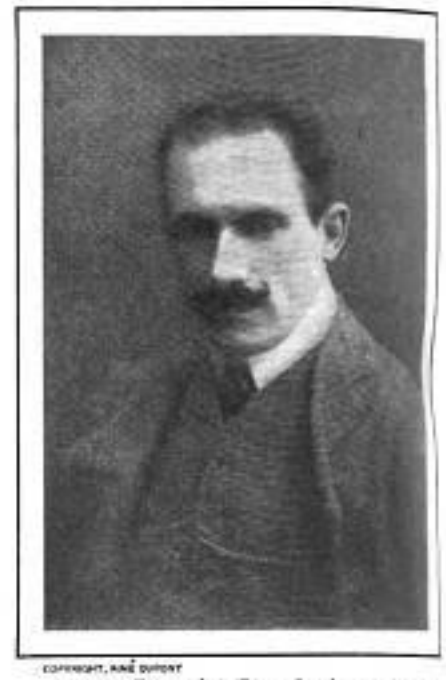
Storehouse Labor	.04		
Productions	.17		
Performing Rights	.09		
Advertising	.09		
Transportation	.20		
Miscellaneous	.19		
	$6.00		$6.00



The total outlay which the Metropolitan will have made when the [season] ends—the middle of next April—will [be] times the price of an orchestra chair, as the gross figures $1,700,000 show. However, this expenditure includes the expenses of the trip during the last two weeks in that month when other cities are to be visited, besides Brooklyn and Philadelphia, where occasional performances are given during the season. The Metropolitan, though seemingly in a position to yield large annual profits from its vast undertaking, really has little beyond glory to compensate for the effort. Last season the surplus was in the neighborhood of $100,000, and this year will show still better earnings; but two seasons back the loss reached nearly half a million, due to a policy of expansion found to be impracticable. It is therefore apparent that the business hazard is sufficient to justify the belief that a one-or-two-hundred-thousand-dollar yearly profit is not unreasonable because the very next season double that amount may be lost.

When it is borne in mind that the stockholders of the Metropolitan, and not the general public, must meet any yearly deficit one appreciates that opera is something of a game—at least so far as stakes are concerned. This becomes still more apparent in view of the fact that many departments must be maintained fifty-two weeks every year in order properly to conduct a season only five months long. That is why the management must know how much it costs to raise the curtain on any given opera and what the average sum is for any one such operation. At present the Metropolitan estimates that the average cost of a presentation of opera is $8000. This estimate is figured on the one hundred and seventy-odd opera and concert performances given in New York and in all outside cities, including the sixteen provided for Brooklyn music lovers, nine for Philadelphia and fourteen for other cities. The following table of yearly disbursements for all purposes, including the two weeks' road-tour, reveals the directions taken by the $1,700,000 which is the annual outgo from the coffers of the opera-house treasury:

	Number of People	Total for Week	Number of Weeks	Total for Season
Principal Artists	61	$36,700	24	$880,800
1 First Conductor—$30,000 1 First Conductor—$12,000 1 First Conductor—$5,000 6 Assistant Conductors, at $75 a week each	9	2,500	24	60,000
Regular Orchestra	87			
Extra Orchestra	13	7,000	24	168,000
Stage Band	3 to 35			
Chorus	118	3,000	24	72,000
Ballet	36	900	24	21,600
Technical and Scenic	8	700	52	36,400
Wardrobe Department	50	750	30	22,500
Property Department	20	250	30	7,500
Carpenter Department	15	400	52	20,800
Stagehands	50	1,000	30	30,000
Electricians	27	600	40	24,000
Baggage Department	14	200	52	10,400
Office Staff	25	1,300	52	67,600
Treasurer's Department	4	100	52	5,200
Superintendent's and Engineer's Departments, including Watchmen, Ushers, Doorkeepers, Carriagemen and Cleaners	95	15 at 250 80 at 680	52 22	13,000 14,960
Storehouse Employees	12	200	52	10,400
Storehouses — 6 — Annual Rent				25,000
Productions and Materials				50,000
Performing Rights				25,000
Transportation				55,640
Advertising—Newspaper and Billboard				25,000
Miscellaneous—Heat, Light, Insurance, Upkeep, Entertainment, and so on				54,200
Total				$1,700,000

The item of rent for the use of the Metropolitan Opera House, strange though it may seem, is not a debit. The $250,000 which the company receiving a contract to give opera in this edifice would ordinarily be compelled to pay is offset by a delightful arrangement with the Metropolitan Opera and Real-Estate Company—a totally different concern from the Metropolitan Opera Company—which owns the land upon which the structure stands as well as the building itself. The assessed valuation of the whole is a trifle over $2,500,000.

Every one of the forty-five stockholders in the real-estate company owns a box or part of one of the thirty-five boxes in the parterre tier of the opera house, known to residents in the smallest hamlet as the Diamond Horseshoe; but to retain ownership each stockholder merely pays a yearly assessment on the stock held in the realty company, which carries with it the right to occupy the box for all operatic subscription and extra operatic performances given by the Metropolitan organization, excepting the twenty-two Sunday night concerts. As may be seen, the arrangement calls only for the giving of opera in the house, which is thus placed at the disposal of the operatic institution, rent free.

COPYRIGHT, RENÉ DUPONT

Arturo Toscanini, First Conductor of the Metropolitan Opera Company

However, even with this financial plum to start with, the gentlemen owning the $150,000 of stock representing the capitalization have their monetary worries. Unless the management kept hard at work every day in the year it would be out of the question to give so long and so artistically complete a schedule as is regularly undertaken. It is this *modus operandi* that has helped to win for the Metropolitan the reputation of being the foremost opera company in the world.

Though giving a season of opera in New York covers only twenty-two weeks, it requires the thirty remaining at the end of one season to prepare for the next. During the time that those who represent the socially elect in the parterre tier on brilliant nights are relaxing at many watering-places in America and Europe, the business and artistic heads of the Metropolitan are hustling with plans for the opening, several months away.

There are contracts to be renewed with singers, conductors, stage managers, executive heads, scenic designers and builders, music-publishing houses and other individuals and firms; new principals to be sought for and secured; unheard-of or successfully produced operas to be obtained for American first-time presentation, and productions to be constructed. Costumes must be made before the curtain can go up on the initial night of the season that is to come.

The subscription books for the far-off twenty-two weeks also require attention, as do a hundred other important matters touching vital portions of the Metropolitan's broad scheme. From the moment the opera house closes until it reopens there is no time for anything save the formulation and execution of plans for the immediate future.

Within a week after the two weeks' tour following the New York performance, on April thirteenth next, General Manager Giulio Gatti-Casazza and his staff will rush off to Europe—but not to rest. Through the heat of the summer the man whose shoulders carry the burden of executing the projects of the Metropolitan Opera Company will be laboring without thought of more than a brief vacation. From one foreign city to another he will travel, hearing new singers and new and old operas, and continually examining music scores and books of prospective operatic novelties.

Mr. Gatti, as he is called, cannot escape essential details that figure in the progress of the company whose fortunes he directs. Some of the unimportant ones he naturally does—delegate to able men among his corps of lieutenants, but the majority must pass under his personal scrutiny even after they have had preliminary attention from his subordinates. The only exception pertains to the judging of the musical worth of a new opera submitted. [To] [be] [con]tinued

Digitized by Google

Arturo Toscanini, first conductor, performs valuable service, as does Alfred Hertz, the principal musical director of the German operas.

Listening to singing artists is one of the duties that consumes hours of Mr. Gatti's time almost every day for weeks after he sets foot on foreign soil. "Auditions" they are called by opera experts. These auditions are held in theaters engaged for the purpose in Paris and other cities of Europe, and in them American as well as other singers assemble to lift their voices in song, all eager for the coveted Metropolitan contract.

Many of these candidates are detained after their trials to answer pertinent questions and they must be ready with full explanations as to the rôles they are "up in," the nature and extent of their experience, and anything else that has to do with a possible engagement. Scores of applicants are thrust into the musical discard as "not ready," or for one or more reasons that Mr. Gatti does not always make known. This summer clearing house for singers is a big and busy institution, and it has no heart. In some centers the coming of Mr. Gatti is heralded with a swiftness that makes life miserable for this busy man. In Milan he is beset by hordes of incompetents who trail him through the streets, camp on the threshold of his hotel quarters and pester him when he endeavors to eat.

It is not often, however, that any principals seeking posts at the Metropolitan get the chance to warble for the head of the company unless they have previously been passed upon as "promising" or have secured an open-sesame from some soft-hearted or misguided Metropolitan director in the form of a personal letter of introduction. A large number are vocally and otherwise examined by Gabriel Astruc, official Paris representative of New York's opera company, or by one of the general manager's lieutenants. Other agents in Milan, Berlin and elsewhere are sometimes commissioned to perform a similar weeding-out function. Occasionally a singer who has acquired a reputation is added to the Metropolitan's list of principals on the strength of public achievements. These artists naturally are not asked to undergo private auditions, but Mr. Gatti always hears them sing before ordering a contract drawn up for their services.

Metropolitan Songbirds Fed on Money

ALL the time the Metropolitan executives are in Europe an expense is being created. Besides the general manager and his secretary, F. C. Coppicus, who is manager of the concert department of the opera house, Otto Weil, business representative, William J. Guard, press representative, and one or two clerks pass their summers abroad, working unceasingly for the cause of New York's opera. Though only a part of their living expenses, in addition to transportation, is paid, the Metropolitan sees to it that its general manager's twenty-dollars-a-day expenditure for five months is made up to him.

Fifty of the sixty-one principals, nine conductors, four stage managers and business executives, and one hundred members of the chorus and ballet, which total one hundred and fifty-six persons, are transported across the Atlantic twice every season. Though special rates are secured with the various steamship lines because of the wholesale passages bought, this item alone foots up to thousands of dollars a year. The average one-way cost for a principal is one hundred and ten dollars, and some get cabins de luxe; while the chorus and ballet folks get along on forty-five dollars less.

Why is it done? For the excellent reason that nearly all these opera workers are engaged abroad and they will not come to America without receiving traveling expenses. Nowadays even the American principals of the Metropolitan insist upon a European trip twice a year at the expense of New York's big opera company. Among them are Olive Fremstad, Geraldine Farrar, Louise Homer, Riccardo Martin and Putnam Griswold. Often, in addition to the steamship passage, money has to be expended to carry the artist or high-salaried employee in some other department from an inland city to the port from which the steamer sails. Conversely, at the end of the year these travelers return to their respective starting-points, and the railway fares come out of the Metropolitan's treasury.

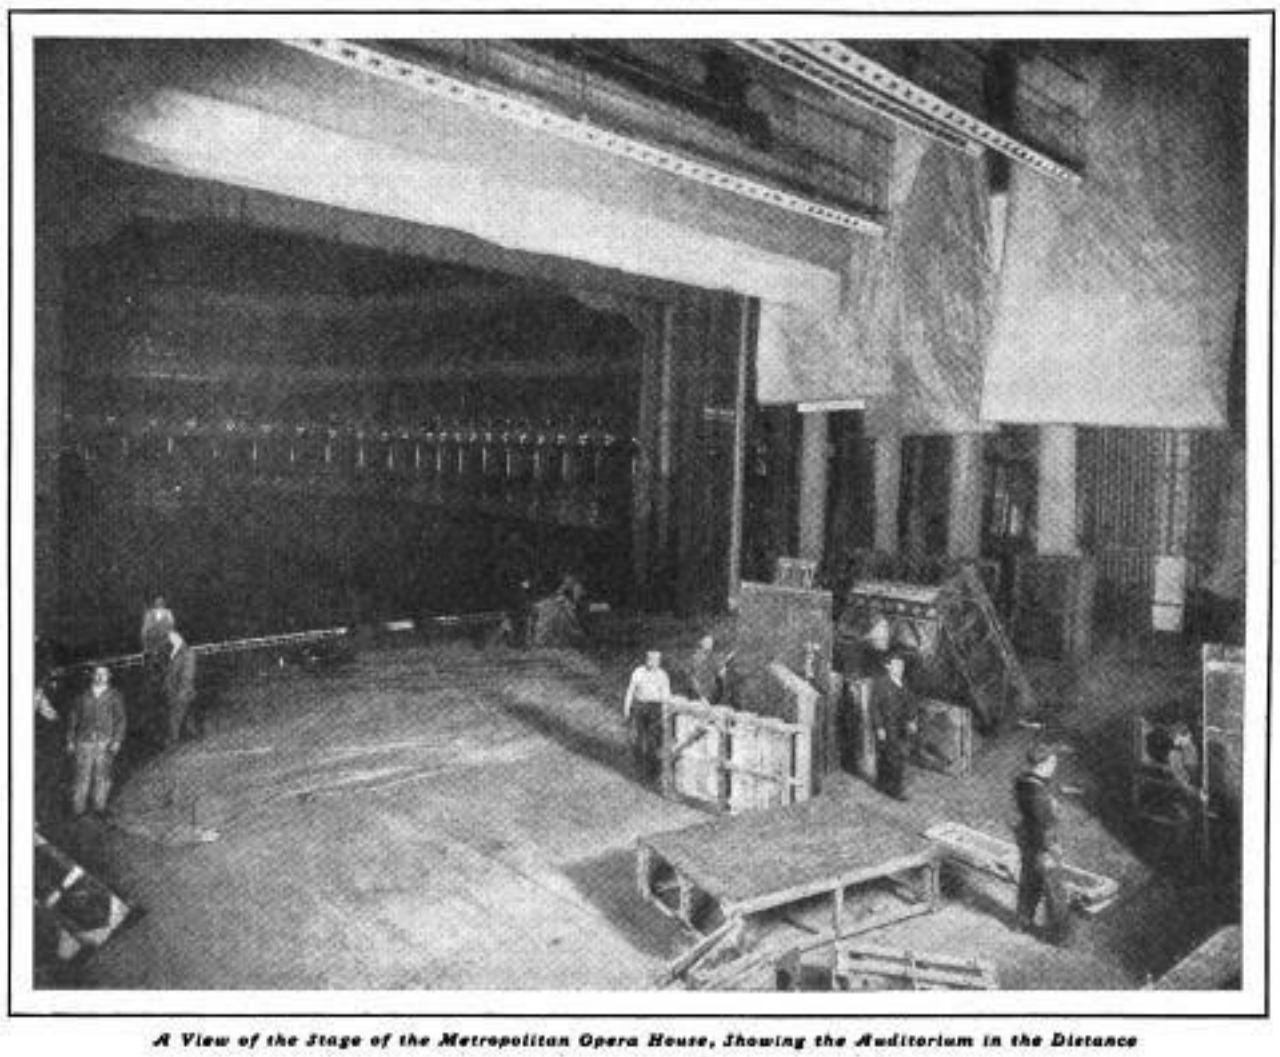
Steamship and railway expenses, however, are small items compared with the salaries the principals draw. The basis of payment is arranged in two ways. Some stars are paid a certain sum for each appearance, with a minimum number of season appearances guaranteed; others—and all the secondary principals—are engaged at monthly salaries and must sing oftener than the more distinguished songbirds.

Caruso, highest paid of any of the leading Metropolitan singers—or any other in the world—gets $2,200 every time he is heard. Geraldine Farrar and Emmy Destinn receive $1200 apiece. Olive Fremstad and Johanna Gadski are made momentarily content with $1000 each, which is the figure paid Berta Morena, a German dramatic soprano. Leo Slezak, the gigantic Czech tenor, called by many Tamagno's successor, finds $1200 to his credit after appearing in a heroic rôle; and Luisa Tetrazzini receives an even $1800 for her single efforts of an afternoon or evening.

Dimitri Smirnoff, a Russian lyric tenor, should be more than satisfied with the $1000 set aside for him for an appearance, which is $250 more than the amount accorded Carl Burrian, the heavy Wagnerian tenor, and Carl Jorn, another German tenor who is heard in rôles less robust. For each of his few endeavors at the Metropolitan, Maurice Renaud, the French barytone, is paid $1000. Louise Homer and Margarete Matzenauer, first contraltos, draw $500 a performance; and Herman Jadlowker, tenor, $600. Antonio Scotti, for years the most popular barytone singing in the United States, is a $400-a-night man. The rest of the stars are contracted with for a given sum for the season on a monthly scale, but payable semi-monthly, and they are required to sing a certain number of times or forfeit a proportionate percentage of their salaries. In case circumstances demand an increased amount of work they receive what is known as a "cachet," which is paid on the basis of so much an appearance, the sum being reached by dividing the season's salary by the minimum number of performances for which the artist is secured.

Pasquale Amato receives $30,000 a season for seventy appearances, which is slightly in excess of $425 an appearance. He is said by critics to be worth double that amount, as he is increasing in his drawing power. Riccardo Martin, one of the foremost of American tenors now in grand opera, and the singer who is invariably called upon to take Caruso's place when the latter has an extended illness or vocal indisposition, is reputed to be the best bargain in the Metropolitan list of principals. Though on two occasions he has been largely instrumental in saving the day when Caruso was forced to cease singing before the season was more than half through, his salary is only $20,000 a year. His contract stipulates that he shall appear fifty times to earn this money, which places him in the $400-a-night class.

Putnam Griswold, an American basso now singing at the Metropolitan in his first year, receives $15,000 for the season, which is the figure set aside for Adamo Didur, the French basso. Alma Gluck and Bella Alten, sopranos; Jeanne Maubourg and Florence Wickham, contraltos; Otto Goritz, Herman Weil and Dinh Gilly, barytones; Antonio Pini-Corsi and Leon Rothier, bassos, and the numerous other principals completing the sixty-one on the Metropolitan books, receive from $20,000 to $2500 a year for their efforts.



And yet there are many other expenditures. Take that pertaining to the payment to the music-publishing firms for the performing rights of operas. One firm in Milan receives from the Metropolitan $350 every time Puccini's La Bohême is sung. The price originally was $150, but the cost of living is increasing. The same composer's Tosca and Madame Butterfly cost the management of the New York opera house $400 for a single presentation, while The Girl of the Golden West comes even higher. The copyright owners ask $500 for permitting this Puccini work to be given in public. Do not imagine for a moment, however, that Giacomo Puccini receives the major share of these royalties, which make up practically the total outlay in this respect which the Metropolitan makes every season. That goes to the Milan music company, generally credited with being the shrewdest music publishers connected with opera, who, for reasons of their own, are said to allow another manager to give Puccini operas for sums considerably below those which must be paid by the Metropolitan.

An Opera Season Without Puccini

THE attitude of these publishers caused a break in the former arrangements existing between this house and the Philadelphia-Chicago company last fall, when General Manager Andreas Dippel refused to agree to give the number of performances of Puccini works asked by the Italian publishers for the season of 1911-12. Mr. Dippel has gotten along very well without them, for he will break nearly even on the year, thanks to the guaranty against loss provided by public-spirited Philadelphia citizens and the increased patronage in Chicago, where the ten-week season was recently concluded.

Last year the Philadelphia-Chicago organization, just starting out, found the financial situation rather hard. When a final accounting was made it appeared that nearly a quarter of a million dollars had been lost. The twenty weeks was divided between the two cities making up the name of the company of which Mr. Dippel is executive head; and, though Philadelphia responded generously in supporting the cause, Chicagoans followed a partial stay-at-home policy. The Metropolitan Opera House in Philadelphia is one of the most completely equipped edifices ever built, and opera in that city has become almost as much of a social function as it is in New York. The business policy, modeled after that of the New York Metropolitan Company, with which the Philadelphia-Chicago institution is affiliated, is modern to the last detail; and Mr. Edward T. Stotesbury, a business associate of Mr. J. Pierpont Morgan, is a prime mover in its affairs.

During the two-and-a-half-month season in Philadelphia, soon to end, French opera has predominated. Massenet's Cendrillon is one of the novelties brought to this country for the first time; and Mary Garden,

A View of the Stage of the Metropolitan Opera House, Showing the Auditorium in the Distance

Digitized by Google

Luisa Tetrazzini, Charles Dalmores, tenor; Carolina White, soprano; Jeanne Gerville-Réache, contralto; Mario Sammarco, Hector Dufranne and Clarence Whitehill, barytones, and Gustav Huberdeau, basso, are some of the leading artists.

The Boston Opera Company, under General Manager Henry Russell, pays the stipulated price for the performing rights of Puccini operas and a few other bills as well. This year Boston had an eighteen-week schedule that cost the institution, backed chiefly by Mr. Eben Jordan, $700,000. The loss will total over $200,000. Mr. Jordan recently asserted that unless others in Boston assist in carrying the financial burden he will withdraw his support.

As may be seen, there is expense at every turn for the men engaged in giving extended seasons of opera on a high artistic plane. Economize as much as possible, yet there is always some waste. Though a watchful business controller in the person of Mr. John Brown has his hand on the dollars of the Metropolitan Company before they are paid out he cannot always check expenditures regarded by some as extravagant. While his associates are abroad Mr. Brown remains in New York to see that no one runs off with the opera house.

This young man, not yet thirty-five, is a controller who controls—the watchdog of the Metropolitan's fat bank account. If some one mislays a postage stamp or a sheet of music Mr. Brown's effective system can trace it. He has helped introduce economic measures that are saving thousands each year and he is well worth the twelve thousand he receives. Besides, Mr. Brown is the executive officer on the business bridge of the operatic ship; and during the season he works sixteen hours in each twenty-four, Sundays and holidays included. He is one of Mr. Gatti's two hands, the other being Arturo Toscanini.

Every business department head reports to Mr. Brown, particularly when a debt threatens. Sometimes the controller vetoes its creation. Otherwise his O. K., J. B., has to go down in writing. The purchase of supplies of any sort or the addition of another name to a department payroll sheet cannot be done without his sanction. The sole exceptions pertain to the artistic end, which is in Mr. Gatti's hands; but even he is required to make an accounting to the controller. Cab fares used by artists and others when the company goes to Philadelphia or some other city; hauling charges for trunks and settings, and transportation bills, finally pass over the desk of John Brown. The insurance man and the customs broker—for from $7000 to $10,000 a year is paid every season to bring new settings and costumes into the United States from the other side—also visit Mr. Brown with their big and little bills.

Respective heads of departments keep strict account of work done and contracted for, reporting difficulties to Mr. Brown—with the exception of Mr. Toscanini and Edward Siedle, technical director, who also work hand in hand with Mr. Gatti; but within their departments the bosses are supreme so far as carrying out their work is concerned. No better example can be furnished of the details in which a department is immersed than that over which Mr. Siedle has presided during the last twenty years.

Great Expenditures for Scenery and Costumes

THE technical end of opera is scarcely less essential than the musical; for, without scenes and costumes, where would opera be? The visual element in an operatic performance has done much to cause the public's liking for this branch of musical art. Small wonder, then, that expert scenic painters, headed by James Fox, modelers and draftsmen are employed all the year round to plan new productions and occasionally prepare fresh sets for operas in the standard repertoire to replace those that have been worn out or which may be improved by the creation of finer wood-and-canvas pictures.

In the Metropolitan's six storehouses, located in various parts of New York readily accessible to the opera house, are one hundred complete productions, as they are officially known. Each of these productions is composed of from one to eight scenes, made up of what are known as set pieces, drops and backs, and furniture, hangings, pictures and other articles needed to convey to the eye all that it is intended should be shown. The cost of a single production ranges from $10,000 to $50,000, according to the length and character of the opera. One work may require only a comparatively small financial outlay, whereas another needs from two to five times as much to create the series of stage settings. Then there is the cost of the costumes to be computed, which sometimes call for as much as $10,000, exclusive of what several of the foremost principals pay for their own apparel and accouterments. Had it not been possible to buy the costumes of the opera of Boris Godonof in Paris, after their use in that city, their duplication alone would have cost $50,000.

The total investment in the one hundred productions owned by the Metropolitan has already reached nearly $3,000,000; yet this sum is not carried on the books as an asset. Whatever is spent each year for scenery, properties, accessories and costumes goes down as part of the annual operating expense; but the difficulty attached to disposing

COPYRIGHT, HAIN DUPONT
Giulio Gatti-Casazza, General Manager of the Metropolitan Opera Company

of this operatic equipment—should occasion ever arise for such a step—prevents viewing it as something of tangible value available for turnover. When the effects of the former Manhattan Opera Company were purchased from Oscar Hammerstein, two years ago, he received many thousands of dollars less than the prices originally paid.

Mr. Siedle not only must add constantly to his already comprehensive knowledge of history and costume periods, but he frequently consults libraries to gain information in planning for the execution of a proposed new opera. Famous designers on the other side too—among whom is Paquereau—are consulted. In his own workrooms Mr. Siedle has little time for anything other than matters attached to his profession. Scenery that needs rebuilding is reconstructed under his supervision. This always takes place in the summer months on the immense flooring that is laid over the orchestra seats in the auditorium of the opera house. Here the carpenters and painters construct and reconstruct; and when a set is completed a flashlight photograph is taken, to be filed away in the technical records. There, too, are kept books showing the exact location in one of the storehouses of each set piece, drop, back, fly, hanging, property and costume. Each article is given a number, so that it may be located instantly. Already the number of individual pieces belonging to the Metropolitan Company runs into the thousands.

The storehouses are divided into two classes—"live" and "dead." In the two latter are kept the novelties that have failed to win constant public support—productions of operas seldom if ever used in these days, such as Les Huguenots and L'Africaine—and worn-out bits that may come in handy on occasions. Four storehouses contain the scenic paraphernalia in current demand, and in them a dozen men are kept constantly at work. The massive stage of the Metropolitan, a maze of trapdoors, machinery of every modern description for operatic purposes, fly galleries, ropes, counterweights and electrical apparatus, must be gone over and repaired every summer. While the carpenters, painters, electricians and machinists are engaged in strengthening materials that have become overused, replacing strained ropes with new ones, touching up sets and other scenic portions that have become rubbed and worn, and repairing such furniture as needs attention, the costume department plies needle and thread on garments that have become ripped or rent.

When one considers that each operatic novelty represents an outlay of many thousands of dollars and that in a single season its possible presentation to the public is limited to from one to eight performances, the element of hazard is at once apparent. Then there is the deterioration to be figured, due to the wear and tear and to the action of the elements, for scenery frequently stands on trucks outside the opera house for hours before it can be removed to the proper storehouse.

Apart from day-to-day labors of the corps of employees directed by the superintendent of the opera house, no great effort is required on the auditorium. The red-and-gold decorations require no going over, the big and handsome yellow curtains seem to take on added richness of tone as years roll on, and the upholstery and seats are so substantial that only slight repairs are called for. Cleaning alone appears the main requisite, and in this regard the auditorium, foyers and rooms of the Metropolitan have ample attention.

Along in September of this year the early vanguard of scenery and costumes purchased or made to order abroad will begin to arrive in New York. Before it has been inspected, inventoried, photographed and put away for future use, one or more of Mr. Gatti's staff will return. A few weeks later the general manager himself will put in an appearance, and then the great machine of the opera house will tighten up. Next will come a preliminary announcement to the waiting newspapers, hungry for the first scrap of information, and shortly afterward the opening of the season subscription sale of seats and grand-tier boxes—the latter, to the number of thirty-five, being open to the general public. This is the final step of the introductory stage, which needs only the formal issuing of the prospectus, setting forth the season's plans, in which the fresh works to be produced, the proposed operatic revivals and the list of old and new principals, conductors, stage managers, and so on, are announced. Only one added bit of data is required—the opera that is to open the season, the cast that will appear and the *chef-d'orchestre*.

Gradually the eve of the first performance approaches. Daily newspapers carry thousands of dollars in advertising; rehearsals progress in every part of the opera house—the orchestra in the pit of the auditorium, the ballet in the rehearsal room recently built on the roof of the house, sections of the chorus in the foyers and large available rooms; and dozens of the score and more of dressing rooms are alive with artists singing portions of rôles to the piano accompaniment of the assistant conductors, who act as coaches.

When performances actually begin the activities seem to take on renewed energy, because then there are rehearsals of semi-complete and complete character that demand the services of every person connected with the artistic department of the company. Getting ready for a first night is a task that drives nearly every one concerned almost distracted; and when a dress rehearsal of a new opera finally arrives tempers approach the explosion point. During a season, every day at the opera house is a field day. From nine o'clock in the morning until six or seven in the evening no employee, regardless of position, is free from labor. Only those principals who have sung at a performance or rehearsal on the afternoon or night preceding are exempt. The rest, including the working singers who receive large emoluments, toil unceasingly until the task at hand is pronounced ready for the public's consideration. A bulletin board summons stars, conductors, stage manager, ballet directors, chorus masters and others to duties assigned for specific places in the opera house at stated hours. It is pretty close to bedlam in the Metropolitan when the season is on—and there is no rest for the weary.

Big Repertoires for American Audiences

WHILE all this musical rumpus is going on Giulio Gatti-Casazza faces one of his really difficult problems. This problem, which rises early each morning and seemingly never sleeps, is the making of the repertoire. Chess is child's play compared with the task of selecting the operas to be performed, the days of their presentation and the chief singers who can be utilized for the principal rôles. The general manager begins by listing the standard operas in popular demand and the few novelties used from year to year that have proved partial or complete successes. In European opera houses the patrons feel that efficient management is shown when from eight to a dozen operas are assembled to form a repertoire; but nothing like this obtains in New York. There opera-goers insist upon—and get—no less than twenty different works every season; and often the number runs as high as thirty.

Mr. Gatti's chief caution must be exercised in avoiding the performance of a certain opera oftener than twice in the season on any given subscription night or matinée. And, even with such a narrow latitude, he is forced to see to it that such repetition does not take place without a lapse of eight to ten weeks between the original and the second presentations. If unavoidable circumstances leave no other alternative than to disregard this rule there is trouble. A Monday-night subscriber, who is the most fashionable and critical with whom the manager has to deal, wants as many different operas as possible and all the stars obtainable when he occupies his orchestra seat or box. Woe betide Mr. Gatti if he repeats Aïda or Orfeo on a Monday evening within a few weeks after its prior performance, provided it has taken place on that evening of the week. The attitude of the Wednesday-night subscribers, next in importance to the first mentioned, is similar; and so, too, is that of the patrons of Friday evening, Saturday matinée and Thursday night, who are ranged thus in relative social standing.

Sitting at his flat-top desk, with a huge chart before him, the Metropolitan's chief executive arranges and rearranges throughout every day in the twenty-two weeks that fray sensitive nerves. This chart is a printed form, blocked off in small squares to the number of three hundred and thirty-six, thus allowing for afternoons and evenings for twenty-four weeks. Across one line are regular and extra spaces for every day in the week, and running down the sheet are similar blanks, enabling Mr. Gatti to place any notations he sees fit, which act as a guide

Digitized by Google

to show what works have been performed or are to be performed on any given night or afternoon during the home and out-of-town seasons. It is an operatic timetable, with which the general manager runs his limited express train, laden with musical wares for a particular people.

The choosing of operas for specified occasions, however, is only one of the factors that cause frequent managerial brain contortions. The casting of the various rôles brings more creases to Mr. Gatti's brow than anything else. It is not alone a question as to the principals available, for there are usually enough to go round. The chief obstacle to surmount is to give every first-rate artist the number of performances his or her contract calls for. Unless this is done the Metropolitan is paying for services not rendered.

It would never do to report that Miss Farrar or Madame Destinn had received several thousands in the coin of the realm which she had not sung for. Hardly! Therefore arrangements are made with the Boston and the Philadelphia-Chicago Opera Companies whereby an exchange of artists is effected. Says the Metropolitan to its colleagues: "We'll let you have half a dozen of our stars when they can be spared if you pay us their salaries; and once in a while you may send us a few of your best warblers." The result is that, with its large organization, which has many more principals than either of the two other companies, the Metropolitan sells more musical merchandise than it buys, and is thereby able to take care of the guaranteed performances to its artists. The annual income from this source varies, but in 1911-12 it will reach $75,000.

Another outlet for the excess appearances of some of the Metropolitan singers is the concert field. In the past five years this business has grown to an extent requiring the creation of a special department, which now takes in from $75,000 to $100,000 a season. The beauty of an opera-house contract with a principal is that the singer agrees to appear a given number of times within a prescribed period, and at such places as the management may indicate. Provision for traveling expenses only is specified. These appearances may be in either opera or concert. Until last year, when a new contract was entered into, Caruso agreed to sing for the Metropolitan one hundred times every twelve months for $168,000, and the opera company always secured his European and other engagements. The great tenor was farmed out, so to speak. Now he sings fifty times a season for the New York organization and is paid $2200 for each rôle he undertakes. In case Caruso is asked to exceed his guaranteed performances he is paid at the prevailing rate. On the other hand, he must sing to collect, else his bank account does not grow. Last year he lost $40,000 through illness, and two years before almost that amount.

There was a time when the artistic section of the opera ran the business office, chasing it about unceremoniously, with rude proddings that wore impresarios to the bone. In these days, however, the boot has shifted, and one-thousand-dollar-a-night artists say "Yes, sir!" to the manager's commands and roll over whenever they are told. As may be seen, the business side of an operatic enterprise—efficiently administered—has been the force in its artistic development. The thrill of a distinguished tenor's high tones, the sonorous sweep of a fine orchestra, ballet dancing that charms, and scenic splendor perfect to the last detail, are tangible factors for public discussion; but the one element that creates it all—that welds the component parts into a cohesive whole, keeping them intact when they waver—is commonly overlooked.

To keep society's flock in good humor is the first duty of the Metropolitan management, as well as of those controlling the working policies of the companies operating in Boston, Philadelphia and Chicago. Opera, especially in the cases of America's Big Three, reigns first for those whose plump pocketbooks show elastic willingness to foot huge bills—for the common herd afterward.

With the opera business of the United States virtually vested in these organizations, each confining its efforts to given territorial zones, the public for the first time in musical history beholds an industrious and carefully planned procedure that has displaced former hit-or-miss methods. The march of operatic events in this country has gradually been dominated by the business side, which has been put to use other than raising the funds necessary to obtain wonderful voices and the accessories of operatic pomp.

Few persons bound homeward after three hours of music, dramatic action and pictorial display remotely reflect upon the business problems connected with a single performance. For them the burning issue is what has or has not been done, according to the messages conveyed to their brains through the mediums of ears and eyes. A slight mishap on the stage that may cause the disarrangement of some piece of scenery is the signal for critical comment, no matter how perfect the remainder of the effort may be. The necessary substitution of one singer for another whose popularity is a shade greater brings sharp censure. The enforced change of an opera because of the illness of a principal essential to the cast is more than likely to raise a wail of fault-finding. And the management is receiver-general for any blame forthcoming, though rarely praised by the public for any artistic glory achieved.

In catering to so hypercritical a clientèle as this, it is only natural that every person in such an organization as the Metropolitan should be constantly strung up to a high nervous pitch. The business personnel and the artists are working on a hair-trigger, with the heaviest load centering upon the former. Expensively gowned women and men in immaculate attire may not realize this, yet the fact is patent to those who stop to think. The late Maurice Grau was the first Metropolitan manager to become cognizant of the situation, and he wisely started to build a business department many years ago. By degrees it has grown in size and efficiency through the labors of his successors, until now it is a machine whose wheels mesh with that nicety that makes for maximum power at a minimum of effort.

It is well that this is so, for there are many details other than those pertaining to actual performances.

THE RECORDING ANGEL

XVII

By CORRA HARRIS

ILLUSTRATED BY WALTER H. EVERETT

SYLVIA was seated at a small table in the middle of the tent. Opposite her on the other side of the table was a vacant chair. She wore a flaming red gown, tightened beneath her bust with a broad girdle of gold-colored tinsel. The ends of it hung down heavily and indicated the slenderness of her figure. Her bright hair was concealed beneath a wig of long, raven-black locks. And the queer thing was one perceived at once that this dark crown was the logical setting for her features. It revealed that ancient fierceness of the aboriginal feminine, with which she was so well endowed and which her yellow braids had always concealed. In the beginning all women had black hair. The blond shade so many of them retain now is a sort of disguise they have developed by prayer and by the practice of light-colored innocency. But you can never know the real nature of any woman until you have examined her features in their native shade of dark hair. Blue eyes and the fairest skin will make confession there of traits never suspected so long as they were haloed in corn-tassel curls.

To see Sylvia now was to behold a revelation. Her face was a gem—human, blood illumined, but crystal cold. The heart of such a woman is the crucible of a beautiful baby, but that is its purpose. It sustains her, not you. She can no more open it to the tender fires of love than a ruby can bleed. She is a thing to possess, to keep, to hold, to have and to love, but that is her desire and her limit. She is so made that she cannot love in return. Therefore, she is the remaining, everlasting, untrodden frontier toward which all lovers strive in vain.

But the fact that she could not love did not mean that she could not flame high with an anger that amounted to rage when deprived of her mastering passion to excite love in another. She sat now like a slender, red-lipped, furious-eyed conflagration, her elbows resting upon the table and her chin in her two hands folded under it, with the fingers pressed hard into the glowing cheek on either side. She was thinking of this—that every man and every woman on the lawn had been into the tent to have their fortunes told except Jim Bone. She was making up her mind what this meant. And, as fast as she made it, the fury of her indignation dissolved it and she had it all to do over again. An enraged woman has a power of imagination and of vindictiveness where a man is concerned that the devil might well envy. Slowly the dark pupils of her eyes brightened and glistened in the gathering rain of her tears. This is always an indication of reaction of emotion in a woman, and a sign that she has made up the thing she calls her mind—which is really the passing formula of her feelings—into a pious or a cruel resolution. You may be sure when you see them that she has either yielded to martyrdom or to vengeance. In Sylvia's case it was the latter, of course. Such a woman never chooses the sanctities of grief. She determined that never again would she speak to Jim Bone or even recognize his existence. As the tears flowed down her face in a perfect torrent of relief she was enjoying the most delightful satisfaction of a mortified woman, that of crucifying the man she wanted for a lover. She pictured the times and occasions when she would accomplish his sufferings. She was trampling him in advance beneath her snowy feet as if he had been the grapes in the winepress of her wrath. At this moment, when he had been utterly discomfited and destroyed in her imagination, there fell upon the bright triangle of sunlight admitted by the drawn flaps of the tent the long, exaggerated figure of a man advancing. The next moment Jim Bone stood before her, breathless, excited like a man who has escaped pursuers.

"Sylvia!" he exclaimed, staring at her with startled eyes. "Sylvia, what is it?"

He had seen the tears—or had he seen them? If so, by what miracle had they disappeared?

With a quick motion of her hands, a flurry of her long red sleeves, a stiffening of her figure, she sat before him calmly, coolly brilliant, with no more expression of recognition than a gipsy shows to a customer.

"Tell your fortune, sir?" she murmured in the sing-song, ingratiating voice of her rôle.

He sat down opposite her, silent, with the puzzled expression of a man who is looking for a person he knew and expected to find in this place.

"Past, present and future I can tell," she went on, shuffling a deck of cards and gazing into his face with the expression of a youthful sphinx who was reading his soul.

"Sylvia," he cried, leaning across the table with the passionate protecting tenderness of a hundred knights in his glowing face, "has anybody done anything to you?"

He knew what he meant, but his training did not permit him to put it into words nicely. He was thinking of how many times during the afternoon he had seen Fanning-Rucker coming in and out of the tent, sometimes conducting a party of guests, but more often alone.

With one hand now she held a fan of cards which she studied with well-feigned interest, as if she traced his fate from one to another and discovered marvelous adventures

Digitized by Google

revealed by the Fates. The other hand she laid upturned upon the table, so that the pink palm showed and glowed upon the dull brown wood.

"Cross my palm with silver, sir," she said, lifting her mystery-darkened eyes from the cards to his face.

He submitted to the whim of her disguise, looked down at the slender fingers, at the pink palm veined like a pretty flower, leaned back sideways in his chair, poked one leg out the way a man always does when he yields his pocket, thrust his hand deep into it, drew forth a gold-piece and laid it reverently upon the gipsy's life line.

"Such a hand was made for gold, not silver!" he laughed, and was delighted with this new gift he discovered in himself for fine speech.

"I see," said Sylvia in a musing voice, "your past ——"

"No, you don't," exclaimed her victim.

"Clearly," she persisted as if she were far beyond the sound of his protest.

"I see a great grassy prairie, thousands of cattle, men riding around them in a wide circle. I see strange camps—or are they towns?" She paused as if the sight before her eyes was devilishly clear, but not to be mentioned in detail. "I see women—two, three, four, five ——" Her eyes widened, as if even in a trance one may experience scandalized amazement.

"No!" shouted the ex-gallant of mining camp music halls and saloons. "You don't see a single woman! There's never been one in my life till now. Sylvia, don't torment me. I tell you I never saw a woman till I saw you! Let the dead past bury its dead. That's Scripture, and mighty good Scripture too. Tell me the present and future. That's all that counts anyhow."

"Your interruptions have broken the spell!" she said, looking up from her cards and speaking naturally.

"Thank Heaven!" murmured Jim to himself.

"You will have to cross my palm again before I can go on," said the acquisitive fortune teller.

He crossed this time with a larger coin.

"Your hand, please," she demanded. He spread it out before her—each thick finger to itself, the great rough palm deeply seamed.

She bent her head over it. She studied it, holding aloof as if she were looking at an ugly, crawling beetle.

"You have recently come into a large fortune. You are spending it wisely. You are winning friends. I see the Bone building open, people streaming through the doors. I hear music inside—and is this the window of a ticket office in one of the towers, with Tony Adams changing money inside?"

Jim snickered, and wondered how soon others also would guess the perfectly patent explanation of the Bone building.

"I see you lifting tombstones from the quarry and looking up at Mildred Percey, who—I can't make out what Mildred is doing—she is bringing you notes. She ——"

"That's all right!" interrupted Bone. This was the first he knew of how astutely the little epitaph business that Mildred was carrying on had been observed.

The fortune teller drew back apologetically as if she had inadvertently penetrated into the region of a love correspondence.

Mr. Bone saw the implication as plainly. He blushed. He would have liked to strangle the innocent poetess.

He brushed his hands together with a quick smacking sound as if he were dusting off a disagreeable matter for which he was in no way responsible.

"Now the future!" he exclaimed.

"The other hand," she said, dismissing his right as if it were an old book too easily read and of little interest.

He yielded his left, spread it wide as if he prayed her to read it all.

She bent her head over it, her face half veiled with the long black locks that fell on either side. She caught her breath as if she scarcely believed the evidence of her own eyes. She touched his fingers gingerly, drew them back one at a time to make sure there was no mistake.

His blood leaped up at the cool pressure. He was wild with impatience. Far out upon the lawn he could hear the laughter and clatter of women's voices. He was afraid of an interruption.

"Well?" he exclaimed at last, no longer able to bear the suspense.

"I'd rather not tell," she pronounced softly.

With the egotism of his sex he was delighted at this sudden diffidence. He concluded that it was the modesty of a maiden who could not tell that she saw her own fate in the lines of the rough palm, yet who wished to indicate that this was the case. There is no creature living so blindly quick to believe in his own attractions as a man. Nothing—neither experience nor observation—will ever teach them that the only women who love them are their wives, these being in a position where they have no choice. But not one of them could be sure of the most tractable maiden ever enclosed by an engagement ring so long as she has the chance of speculating on the love of another man. When a girl is sweetly yielding to her lover, declaring her devotion, swearing tender fidelity, it only means one of two things: that there is no other possible lover in sight; or, most likely, that she is merely subtracting the full ratio of his affection by offering the imaginary equation of her own. She is speculating in the only thing women know how to speculate in—the love of man. She is cornering her market in him against the possible other woman. She is the great original inventor of romantic watered stock. She is taking all she can get upon highly colored representations. She is devouring him. This is fair, for it is exactly what he does to her after marriage. God is a wonderful God. There is no possible chance of false measure between man and man or between man and woman in the age-long balancing of His scales of justice. The discrepancies we think we observe are only apparent, and are due to the fact that for one mortal reason or another we have not time to linger long enough beside the registering beam of His weights to see Him drop in a few extra providences to balance the other fellow's luck.

He Spent His Evenings Whistling and Snickering Over Them

"Sylvia, tell me the future! Oh, confess it, girl!" whispered Jim, trembling with the ecstasy of having his lover's vanity gratified and striving to get a glimpse of the fortune teller's face.

"You will have great success and great wealth," she went on evenly. "But in this hand your life line is shortened. You will die young!"

"Never mind when I die," he laughed, still crowding her as he imagined. "Only say that I shall marry soon!"

"Oh, marry?" she murmured as if she had not considered that worth foretelling. Then she went back over each line in the great palm, tracing it quizzically with her index finger. She paused at little romantic cross stitches here and there, dwelt upon them as possibilities, then passed on. "I cannot find that you do," she announced.

His hand closed instantly and firmly over her fingers.

"You are not looking in the right place, Sylvia," he whispered. "Look at me. You'll find that prophecy written just in front of you if you'll look up!"

She lifted her head and showed him a face of incomparable loveliness, but without a trace of embarrassment or emotion. She was like a red-winged butterfly wheeling beyond his reach. If you have ever observed how little expression there is in a butterfly's countenance you will be better able to interpret a woman like Sylvia. The thing is only a meaningless pair of gorgeous wings, the symbol of what it is not. Sylvia was merely a false intimation, a charm. She had the body of love, but she was herself nothing but this appearance. In this fleeting moment, when he saw in her all that a man could desire in a woman, she was only the cool mathematician of his passion, the calculating miser of emotions in him that she could not feel herself. It happened in a moment. Still holding her fingers with his left hand he thrust the table aside with the other, stood up, drew her to him fiercely, held her, burned her face with kisses.

She was delighted with the computing pleasure of one who adds a digit to his fortune. Never before had she acquired so much in return for what she was really giving—nothing—and she could give nothing. But the instinct of the mere female was alarmed in her. She struggled to release herself.

"You forget yourself!" she exclaimed.

"I do!—but not you! I think of nothing but you. I have thought of nothing else since the first day I saw you. Everything I do is for you. Everywhere I go, east or west, my steps are taken just toward you. I'm tearing down this old town and building it up again, all for you, Sylvia!"

He gasped, dampened, astonished and frenzied afresh by the coolness with which she stood now regarding him, smoothing her dishevelment as collectedly as a bird sits upon a bough and beaks its feathers into place after a flight through the wind.

"I say it's all for you. I love you. I want you for my wife. I am living and dying for you, darling!"

At this moment there was heard the tapping of a cane upon the gravel of the walk outside. From time immemorial lovers have borne outrageous interruptions, if not with patience, at least without vengeance. Doubtless Cain—that first knight in search of a lady, who found her in that other land—experienced the same difficulty. He had not more than finished explaining his excellent family connections to her and taken her hand, prefatory to a declaration of his passion, when some stranger passed by, paused, and observed with astonishment and vulgar interest that he was dressed as a foreigner. Yet nothing is said in the Scriptures of Cain's indignation. Lovers always bear interruptions with the meekness of thieves.

The tapping drew nearer.

"It's Miss Amy!" whispered Sylvia.

She motioned imperatively to the table that lay upon its side with its legs kicked up at horrified angles. Jim sullenly restored it, right side up, between the two chairs.

"Sylvia!" deeply droned Amy's voice.

"Come in, Miss Amy, and get your fortune told." invited Jim Bone, meeting her and guiding her past the tent pole at the entrance between the flaps.

He leaned over and whispered something to Sylvia as Amy settled herself, smiling, on the other side of the table. The girl started, flushed, then hesitated.

"But it would be cruel," she whispered in return.

"It's a fact. There is a chance of it. I've written to a specialist about it," he persisted. Then aloud:

"Lay your palms upon the table just so, Miss Amy."

"No, no," she laughed.

"Just to please the fortune teller and me," he insisted.

"Oh, well, have your way," she consented with the air of an old angel willing to play dominoes with fate to please the children, not that she cared anything about the issue.

Sylvia uncurled the fingers of the two soft old hands, looked into the dreaming face above them, then at Jim, as if she were doubtful about breaking into so peaceful a slumber. He nodded that she should go on.

"You shall have the desire of your heart!"

"Ah, what is it?" said Amy as if she good-naturedly searched herself to please them.

"You shall have what you lost a very long time ago."

A change swept over the blind face as if suddenly a curtain had been lifted and profane, earthly eyes saw far within an altar standing in darkness. Sylvia felt the two palms tremble as they were withdrawn and folded together like a book that is closed.

"Never offer a candle to the blind, my dear!" she said, rising. "It is dangerous!"

XVIII

THE lawn party at Mrs. Fanning-Rucker's completed Jim Bone's evolution into all the rights and privileges of citizenship in Ruckersville and rendered him the lion of its social circle. He and Bimber could no longer take their walk down Elbert Avenue in the late afternoon without being prettily hailed from at least two or three verandas by the chirruping voice of Mildred Percey or the still more chirruping voice of Mary Yancey. Mrs. Fanning-Rucker herself never failed to wave him a complimentary salutation if she chanced to be walking beneath the autumn trees on the lawn. He was high in the graces of this lady and had even enjoyed the distinction of declining an invitation to dinner. A certain humorous delicacy made it impossible for him to sit at meat with a man he had kicked. And it was a fact that Mrs. Martin had called him in to consult upon ways and means of increasing the Bible Woman's Fund, which was still behind. And if he met Leonora Bell on her way home from school he was always obliged to stand hat in hand in a sidewalk tête-à-tête upon some highly moral subject—the only topics upon which

Digitized by Google

Leonora would converse. Indeed, whenever he found himself approaching this lady he experienced the disagreeable sensation of beginning to climb at once, of stepping upon his dead self to some higher thing in her honor. Bimber accepted this change and these interruptions philosophically, passing the time snuffing among the gathering autumn leaves and plumy goldenrod stalks in the trenches that divided the side path from the street, and in talking cheerfully to himself with his tail.

The most intimate Boswell cannot always construe accurately the changes that take place in the habits of his hero, and this author is, therefore, unable to say for certain why Mr. Bone ceased to take his accustomed walk out Elbert Avenue in the late afternoons. Whether it was due to the increasing demands of his business or to the fact that the moment he set foot there he became a mere ladies' man and subject to the whims and caprices of veranda femininity; or whether—and this seems most likely—it was because he could get no glimpse of Sylvia about the old house beyond the cow pasture on the edge of town, it would be hard to say. Upon the one or two occasions when he had made bold enough to call, he was received only by old Clark Story, who invariably explained that his daughter was out, and took a promoter's advantage of the occasion to exploit the mineral possibilities of his grassy cornfields and stump-toed cotton patches. It appeared that Sylvia was hibernating, romantically speaking. He occasionally saw her walking along the streets of the town, red and golden and wind-blown like the autumn leaves that were now falling from the trees and that sometimes accompanied her in little whirls and eddies of motion from the branches above, as if they recognized a relationship.

The one place where he continued to meet Sylvia was in Amy's house. Amy, who was sensitive to the cold, had withdrawn from her window during the first gusty days of October and was now always to be found sitting in a tall, straight chair, with the firelight from her hearth, where fragrant hickory logs blazed, illumining her face and bringing out to a more glorious red the roses in her gown. You could have told the season of the year by the bright calendar of shawls upon Amy's shoulders. At this time she wore a little red crocheted shoulder cape. Later she was to be seen wrapped round and round in a thick, old-fashioned blanket shawl of more colors than any rainbow could ever flame. Still later, when the March winds dropped down and there was no more danger of neuralgia, she was to be seen with a tiny square of blue cashmere pinned over these same shoulders with a double plait in front. It was her sky-sign to the little spring angels that they might now let the dogwood blossoms out, and the red buds and the wild honeysuckle and all that sweet fragrance of April-kissing blossoms, which declare that the Lord is good and the earth is beautiful, and more particularly that the sun is now warm enough for an elderly lady-angel, still in the flesh, to take a few liberties with the weather.

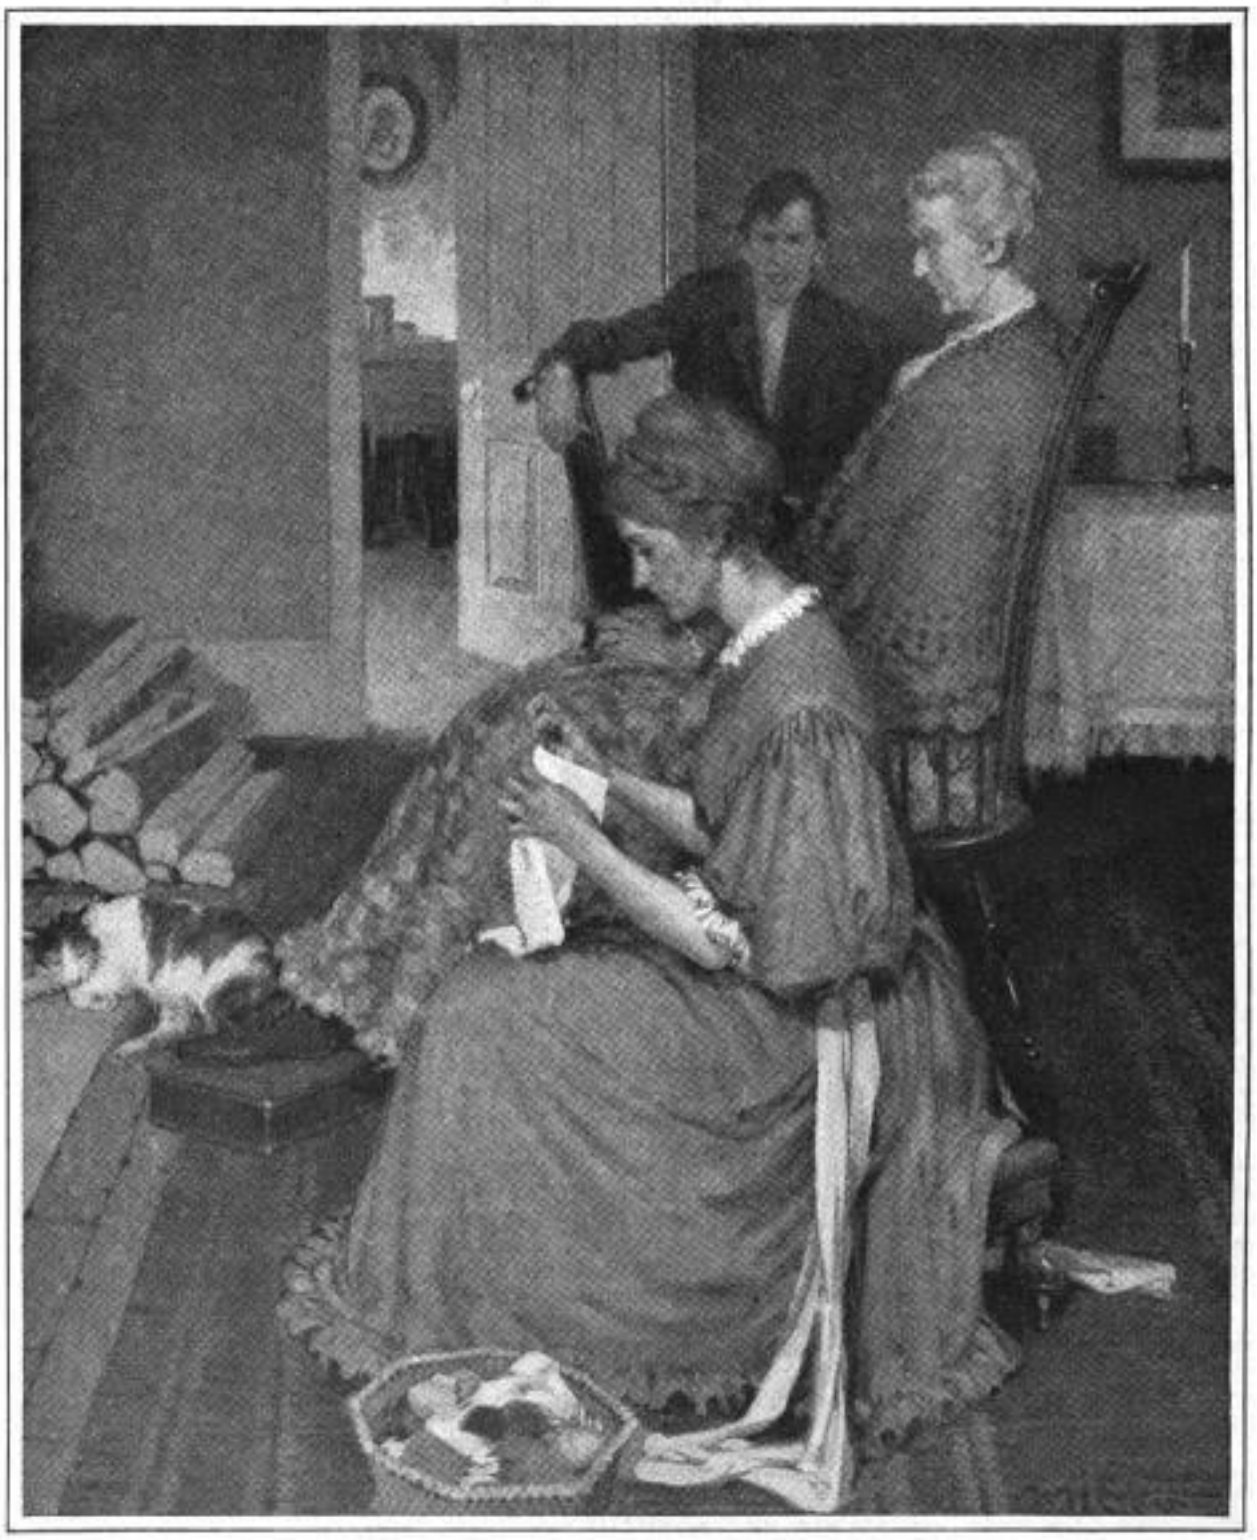
Jim, I say, often found Sylvia meddling with Amy's beads when he came now for his afternoon visit. It appeared that Amy was teaching Sylvia the marvelous art of beading a girdle for her enchanting waist. I say this appeared to be the case. What Sylvia was really doing there only God and the sphinx knew. I draw you merely the picture of the scene they made: Jim sitting cross-legged and sideways on his chair, one arm thrown over the back of it, his hat resting upon his knee as if it were a knob and his face a completely equipped station for the wireless telegraphy of love signaling. Sylvia sat upon the other side of Amy on a low stool, head demurely bowed, drawing great draughts of information from Amy upon the art of sewing beads to a waistband in such a manner that no one afterward could resist the said waist.

But more often than not the entrance of Mr. Bone was a signal for laying aside this work, and the talk was all of Amy's Book of Life, upon which she was very busy these days. The secret had been confided also to Sylvia, who was sometimes called upon to copy strange passages for Amy—the old angel being subject to irrelevant fits of inspiration, when she could not wait for Elbert to come in the evening to write them down for her. Jim was himself the victim of such a mood upon one occasion.

"Jimmy," said Amy, "what is a hero?"

"What is a hero?" stammered Jimmy—"Did you say what is a hero?"

It was as if she had asked him to parse a terrible kind of verb. He looked this way and that with the blank expression of a boy who does not know his lesson. Sylvia added to his confusion by raising her eyes to his face with one of those waiting looks that is not a question but a personal commentary upon the victim.



"I don't know," he said at last. "Never saw one."

"I am wondering," Amy went on dreamily, "whether heroism is just an idea we have in our minds, or whether God knows that every man is a hero and we in our blindness have lost that sense of one another. Since I have been writing these scriptures of men and women in Ruckersville, it seems to me I can't make out one man better than another, or so much worse than another, according to all of their deeds. I am needing a hero, Jimmy, or else I've too many heroes. Seems as if my little Book of Life will be spoiled if I can't find a soul to top it off with. I doubt if it's just deeds, anyhow, that make a hero; but it's some quality of the spirit. The Old Testament wouldn't amount to much if it hadn't been for Moses. When it comes to pinning your faith, you'd rather believe in a leader like him than in the finest prophecies Isaiah ever wrote. Wish I could find the Moses for my little apochryphal scriptures—a man that could stir up Nature to furnish him with a pillar of cloud by day and of fire by night. I have always thought, Jimmy, that was a great compliment the universe paid Moses; and it shows that the very elements recognize a hero when they see him."

Thus Amy imagined that she held Mr. Bone's attention. As a matter of fact, she only furnished a high altitude from which he signaled across her to Sylvia, with every known art of the masculine eye. And when all is said that can be said of the coquetting of woman's eyes, it amounts to nothing compared with the superior force and boldness of a man's when he is inspired by passion. He will say things with them that few women would endure to hear translated into words. But in this mesmeric language they accept what he means without so much as the reproach of a blush. Sylvia had reduced her love to this kind of long-distance kissing silence. After the lawn party at Mrs. Fanning-Rucker's she had avoided being alone with him. But, safely sheltered beneath Amy's protecting wings, she sat like a little coal of fire who enjoyed having herself blown upon by her lover's passion, merely glowing to herself in return, but not to him. And never on these occasions when he met her there would she permit him to accompany her home. She made a thousand excuses to avoid this. She would be going to see Mrs. Fanning-Rucker, for example—this lady now professing as much interest in her as if she had made her the ward of her favor. Or she would be going for a little shopping—anywhere, any way, except straight home accompanied by Mr. Jim Bone. When a man has held you in his arms and kissed you, you become *particeps criminis* if you give him another opportunity to repeat it, no matter how much you may wish him to do so. Thus do women preserve the faith and admiration of men at the expense of their own desires. It is a curious thing about men that they fear and mistrust the character of any woman who confesses a nature and instincts similar to their own; although it is perfectly certain that the good God who made them both and endowed them very similarly is not of the same mind.

It was about this time that Jim Bone began to take a more than complimentary interest in Amy's Book of Life. Slowly the audacious idea took possession of him to use these scriptures for his own purpose. He had already observed the effect of the Town Testament upon the citizens of Ruckersville, with diabolical enjoyment. As a rule, the public opinion of Heaven is too far removed to affect human conduct to any appreciable degree. But if the Recording Angel himself had contributed this serial to The Monthly Mercury the result could not have been more startling to the victims, or more salutary. There were distinct indications of the reversing of earthly judgments and mortal estimates. The "last" was coming "first." Tony Adams, for example, who had long despised himself through being so thoroughly despised by his fellow townsmen, was

Penalizing Parenthood

DOES Congress wish to promote race-suicide? Is it its aim to discourage the birth of legitimate children in the United States, and to punish the fathers and mothers of such legitimate children as are now being fed, clothed and educated in hundreds of thousands of homes? That is what its income tax will do if its present form is not so altered as to obviate the injustice it will work. Congress proposes to tax all incomes of more than five thousand dollars.

Any income tax in this country has always been held by those who favor it as something to apply in times of war or other great exceptional drain on the people's purse. Congress, however, in time of peace, with an eye on the gallery, begs the "poor man" to watch it make the "rich man" pay for running the Government. Let every American father who has a taxable income think over this proposal. This is how it will work:

Mr. Jones and Mr. Brown live next door to each other. Mr. Jones' income is ten thousand dollars; so is Mr. Brown's; therefore, since their incomes are equal, they must be equally taxed. That is as far as Congress sees; that is the gauge of its statesmanship. But Mr. Jones is a bachelor, supporting nobody but himself, while Mr. Brown has a wife and five children to feed and clothe and send to school and college. Tax these two men equally? Let every Mr. Brown in the country ask himself if that is a fair way to tax citizens, or if that is the way to encourage a man to marry and have children.

If there is to be an income tax let there be a rebate for every child a father is raising.

Why Be a Pole-Seeker?

WHY should anybody discover the South Pole? Travel in that region is admittedly disagreeable and dangerous in the highest degree. The discoverer will get mainly frostbites and chronic indigestion—a few days of wide notoriety, until some unwritten-law murderer drives him from the front page—a paragraph in the encyclopedia for people to read after he is dead. Why not tarry a while round the seventieth parallel and then claim to have discovered the Pole?

Of course, in that case, many people will say you are a liar; but if you do discover the Pole many people will say you are a liar too.

Why write a masterpiece that only a few persons will recognize as a masterpiece until long after the author's death, while in his lifetime some sloppy historical romance gets all the money and applause? Why spend laborious and poverty-stricken years in pursuit of a great scientific discovery when, by mixing an inexpensive compound of bad whisky, opium and pumpwater, sticking a fancy label on it and selling it as a sure cure for consumption, you can make more money in a short time than Pasteur made in all his life? Also, you may be highly respected as a pillar of society, while Pasteur was derided as a lunatic.

The answer is that men do these toilsome, ill-requited things because they must. Human nature is nearly always honest. A successful faker is really a rare freak. Cagliostro and Dowie were geniuses, almost as exceptional as Mozart and Milton—and both ended in failure. Contrary to a popular belief, we say: Never try to fake! If you are a natural-born faker of course you will fake anyhow—and very likely succeed at it. If you are not the rare natural-born faker you don't stand one chance in a thousand of putting it across.

Looting by Insiders

A BRAND-NEW congressional report shows all over again that H. O. Havemeyer organized the Sugar Trust in 1887 by combining seventeen competing refineries that were capitalized at six million dollars, for which the trust immediately issued fifty million dollars in stock, twenty millions going to Havemeyer and his associates. Five years later, Havemeyer and two other insiders personally bought nearly half the stock of the Spreckels Refining Company at par, soon exchanging it for trust stock at two for one.

"It is hardly possible," says the report, "that the three insiders cleared less than two and three-quarter million dollars on this transaction." The trust next absorbed the Franklin Refinery, its president again personally buying stock beforehand.

"It is probable that Mr. Havemeyer individually cleared more than a million dollars in this transaction"—this, mind you, while ostensibly acting in the interest of the trust's stockholders.

When the National Sugar Company was absorbed by the trust Mr. Havemeyer appears to have profited personally to the extent of seven and a half million dollars in stock. All the while Havemeyer and other insiders were running deals in the trust's stock on the exchange. It used to be said they made two dollars in stock jobbing for every dollar they made in refining sugar. At the time of his death Havemeyer owned less than nine hundred shares of trust stock. He had unloaded.

This outrageous stock watering, stock juggling and skinning of the corporation by insiders is one of the greatest of trust evils. The Sherman Law hasn't a word to say about this sort of thimblerigging, however, and Congress takes no step to prevent it.

Reclaiming the Everglades

THE Everglades of Florida are going the way of that Great American Desert whose waste aridity was described in the school geographies of our fathers; but the transformation is much more rapid. Lake Okechobee—the largest body of fresh water, except Lake Michigan, within the boundaries of the United States—is twenty-one feet above sea-level. It has low, marshy banks on the south, and during the rainy season it overflows, flooding the glades. Florida is digging five main canals, each fifty feet wide, from the lake to tidewater. When completed—a year from next summer—these canals will lower the level of the lake four feet, prevent its overflow, and thus reclaim a large part of the Everglades. When lowered, the lake will still cover half a million acres to a depth of three feet—a great reservoir from which water will be let into the canals and impounded by gates and locks for irrigation purposes as needed during the dry season. The soil of the Everglades is muck, two to fourteen feet in depth. The climate, of course, is subtropical, with frost almost unknown.

It is an admirable scheme, the practical value of which, we believe, is not questioned by any one competent to speak. It should be understood, however, that the Everglades will not be ready for cultivation when the state's job is done. Lateral canals and farm ditches must still be constructed by the landowners. This work is not very expensive, but takes some time. It should also be understood that anybody who buys land in the Everglades with his eyes shut is liable to the same disappointment which awaits a blind investor in the frosty North.

The Money Trust in Alaska

THE Morgan-Guggenheim interests are credited with a thrifty ambition to possess the mineral wealth of Alaska, including the great Bering River and Matanuska coalfields. Everybody knows that transportation is the key to possession of coalfields. The history of the anthracite fields in Pennsylvania and of the most important bituminous deposits shows that plainly enough. Naturally, therefore, the Morgan-Guggenheim syndicate, with almost unlimited command of capital, is building railroads in Alaska; and persons of relatively small financial power who desire to build competing railroads find it difficult to raise the necessary money. A road was built about halfway from the fine harbor of Seward to the Matanuska coalfield; then the supply of capital gave out and construction stopped.

What should the Government do in this case—have a Money Trust investigation to see why Morgan and Guggenheim can raise all the capital they want, though would-be competitors cannot? Or pass a law commanding the Money Trust to vanish? We think not. Fortunately, the Administration doesn't think so either. No possible Wall Street cabal can prevent the Government from raising capital, because it can sell bonds by popular subscription. The Government itself, of course, should build the railroad to the coalfield—being the only enterprise in sight, besides the Morgan-Guggenheim syndicate, that has the financial power to do so. Secretary Fisher recommends this. To ignore the recommendation and then complain that the Money Trust has Alaska by the throat would put Congress in a foolish position.

Coöperation and Government

SENDING us the annual report of the commission of Grand Junction, Colorado, for the fiscal year ending December 31, 1911, an enthusiastic resident observes: "I really believe we have the best city charter in the world." The concluding paragraph of the commission's report says: "Realizing fully the possibility of advancement when there is coöperative effort, we ask that the people indicate their wishes to us fully and freely."

Why shouldn't they have the best city charter in the world? The leading industry in that locality is conducted coöperatively. Its guiding principle, as we understand it, is not what may be most advantageous to three or four exceptionally able or exceptionally lucky fruit-growers, but what is best for the fruit-growers as a body. A small proprietor has the advantages of skilled selling and marketing organization equally with a large one.

Probably it isn't a system calculated to please the Morgans, Rockefellers or Hills. Nietzsche, with his Overman philosophy of the big fish eating the little ones, wouldn't approve it; but for the average sort of people who make up nearly the whole world, it is more comfortable than the devil-catch-the-hindmost system. We should be surprised if the coöperative spirit did not produce good city government.

Our Disappearing Cavalry

THE House of Representatives tore a great hole in the pomp and panoply of war by reducing the enlisted establishment of the regular army from fifteen regiments to ten. A majority of army men no doubt oppose the reduction; but it was pointed out that, for military purposes, the horse is going the way the elephant went long ago. Machine guns and repeating rifles have almost made cavalry nearly useless in actual combat. Railroads, telegraph and telephone have vastly restricted the cavalry's usefulness for the rapid movement of troops and for carrying information. Now the airship promises to take away the only remaining function—that of scouting. Cavalry played a small part in the war between Russia and Japan, and might almost have been dispensed with if the armies had had the aërial scouts that any army would have today. Germany has only one cavalryman to five and a half infantrymen; while our regular army has nearly half as many mounted as foot soldiers.

There must still be cavalry, of course. Without it there would be hardly any pomp and panoply left us—that is Mars' chief asset. War would not be tolerable if it were waged by farmers, mechanics, clerks and shopkeepers in their everyday civil attire. The tragedy would be too apparent. It's the uniforms, the serried ranks, the waving colors and the prancing steeds that make it tolerable. There must be some cavalry. What could a sculptor do with a man in an airship?

Will the President Dare?

THERE will be at Washington a Children's Bureau, extending the activities of the Federal Government into fields it has never, in such outright fashion, entered before. There will be an Industrial Relations Commission to take up broadly the questions of capital and labor. There will be, sooner or later, a Trust Commission, to act in respect to big interstate manufactures about what the Interstate Commerce Commission does in respect to railroads. There will be a parcels post and a Government-built railroad in Alaska. The Federal Government is the most growing concern in the country today.

Therefore the Federal Government must be essentially non-partisan. Politics in the Post-Office Department is bad enough. We saw not long ago what a political appointee did with the Interior Department. President Taft, with his special interest in the courts, has done well in appointing men to the Federal bench irrespective of party. In the diplomatic service he has done decidedly less well. With the ever-widening sphere of Federal activity, party appointments anywhere below the Cabinet are becoming intolerable. It is already time that the whole senatorial and congressional patronage graft was wiped out. Will the next president, whoever he may be, declare that no man can get any Federal job on a Congressional recommendation? Will he have the sand to fight the Senate—if necessary—on that issue? The thing must be done. Governmental expansion is making it imperative. Why shouldn't the next president do it?

WHO'S WHO—AND WHY

Serious and Frivolous Facts About the Great and the Near Great

Cousin Bob

WHAT we like in this country is men who do things in a big way. The piker gets short shrift. The large operator is the person who commands admiration and gets away with the goods. Though it is quite true that small-bore poets and philosophers have been dinging at us for years and years that "little drops of water and little grains of sand make the mighty ocean and the pleasant land," the process is too slow to attract much attention in these United States. We adore the citizen who doesn't waste time collecting drops, but combines half a dozen oceans made up of somebody else's drops and produces The Sea, Unlimited, with each share of the preferred stock carrying a bonus of a share and a half of the common.

This demand is insistent in every walk of life. Scant heed, for example, is paid to the statesman who is a candidate for the vice-presidency; but the patriot who announces himself for the presidency gets his name in the papers—if only to be joshed! And so it goes. We are a wholesale people. We like the inclusive. Anything that is bigger than another thing is necessarily better—and this goes, except as to boils.

Wherefore, we salute Robert F. Broussard, of Louisiana. There is a tribune of the people who has the proper idea. It would have been easy—and perhaps satisfactory—for Broussard to have claimed kinship with a quarter or a half of the people down there; but Robert is not restricted in his views or in his claims. He goes in for broad effects. Consequently he declared himself cousin to every voter in the commonwealth—and he put it over. He is Cousin Bob from the southern muddy end of that state to the northern red end. He hasn't overlooked a bet or a family. He traces his kinship impartially. His genealogical chart looks like a weather map when there is a big storm coming from Medicine Hat; and it ramifies into every cottage, no matter how humble.

Cousin Bob! He has made it stick from Terrebonne to Cherry Ridge; and they like it, too, for Robert has a way with him that makes everybody happy to be included in his list of kin. To be sure, he didn't start as cousin to everybody. When he began he was merely cousin to everybody in Assumption, Iberia, LaFayette, Lafourche, Saint Martin, Saint Mary, Terrebonne and Vermilion; but he soon discovered that these eight parishes gave incomplete scope to his cousinly activities and capabilities, and he began to spread out over the state. Proceeding northward, he annexed parish after parish, bestowing the benediction of cousinship on all with whom he shook hands—and he shook hands with all.

It was not so long before he was the Universal Cousin. There may have been some who refused to be included in the list—but they were grouches, every one of them. Anyhow, it made no difference to Cousin Bob. If any voting citizen refused to be a cousin to Cousin Bob, far be it from Cousin Bob not to be a cousin to him—and the relationship went single, even if not double. Cousin Bob's philosophy is simple and effective. Certain Louisianians may protest they are not his cousins. That is a matter of minor importance. The point is that Cousin Bob is their cousin; and he is satisfied, even if they are not. It is quite impossible to stop Cousin Bob from being everybody's cousin. As I have said, he operates cousinwise on a large and effective scale.

Talking French and Walking Spanish

IT COMES pretty near to being true, at that, down in the Third Louisiana District, where Bob was born and where he has lived all his life. There are not many of the "Cayjins" to whom Bob is not related; and Broussards are as thick as pepperpods. Nine of them ran for various offices in one parish recently, I am told. So it is not to be wondered at that when Cousin Bob decided to come to Congress, some sixteen or seventeen years ago, all the cousins turned in and sent him there—and they have turned in each succeeding two years and sent him back. All Cousin Bob had to do was to make a speech or two in the vernacular—and there are none better in that line—and the cousins marched to the polls in sufficient numbers to overwhelm any upstart Republican who thought the Teche country would ever forget that blood is thicker than water—especially Democratic blood of the well-known and popular Broussard brand.

Cousin Bob knows them all and they all know him. There may be a statesman who can smile more radiantly, shake hands more warmly and remind the voters of that consanguinity more effectively than Cousin Bob; but if there is he has not yet flashed across the purview of my gaze. By referring to the picture that accompanies this gem of English prose you will see what I mean. That picture shows Cousin Bob at his cousinly best.

PHOTO. BY J. HYPOLITE, NEW ORLEANS, LA.

Cousin Bob at His Cousinly Best

Far be it from me to say that when Cousin Bob sought to extend his lines of relationship he had an ulterior motive. Far be it from me—but perhaps he did. At any rate, he began cousining up and down and hither and yon and across and back; and presently, when the moment was opportune, Cousin Bob told all his cousins he was firmly of the opinion that the great and constantly growing family of Broussard should have a United States senatorship within its membership. Where, asked Cousin Bob, would a toga drape more effectively than on the shoulders of a representative of us, my cousins? And, by the same token, said Bob, I have the proper shoulders for such an enterprise.

Well, there were others who thought they had the shoulders—which they had; but not the cousins, as will be shown. Governor Jared Young Sanders, who had been elected senator once and had resigned, fancied his own shoulders; and Arsène P. Pujo offered his. So at it they went, in a campaign leading up to the first primary, to decide which two of the three hopefuls should make the final race.

Sanders had his own powerful machine behind him and Pujo pujoed round after the manner of his kind; but everywhere they went they were greeted by the legions—the phalanxes—of Bob's cousins. Not a meeting did they address that had not its quota of cousins. They found them everywhere—and so did Cousin Bob.

The campaign waxed warm, the candidates waxed one another and the cousins never wavered. They were there to pay honor to their kinsman. Time came for the voting. It was a triumph for the cousins. Cousin Bob was first by so great a plurality that Sanders declined to make the second race, and Arsène P. Pujo was a bad third and had nothing to say or do except to come back to Washington and go to pujoing again. Whereupon, in due course, Cousin Bob will be a United States senator, whereat there is great rejoicing among his loyal and numerous relatives in Louisiana.

Broussard is one of the few members of Congress who can make political speeches in French. He is always sent to districts in Rhode Island and Massachusetts and Maine, where there are many French Canadians, during campaigns; and he can hand out a stump speech in the patois that brings those volatile citizens up standing. His popularity in his own district is unbounded—not only because of his kinship, both real and political, but because he has been assiduous in local affairs during his long service in Congress, and has looked out constantly for his own people. His ideas on the tariff on sugar may not accord with the ideas of the big planters, for instance, but they are in full sympathy with the small growers; and Broussard always sees to it that they are kept so. He is well liked in the House, and is a most engaging and companionable man, expert in legislative matters and of a good deal of ability.

As a campaigner he is a wonder! He maintains his grip on his own people and they are for him to a man. And as a cousin he has never been equaled in this or any other country. Being a cousin with Cousin Bob is more than a profession—it is an art!

A Pool in Eggs

A COMPANY of barnstorming actors rushed into a railroad eating house. The tragedian grabbed a dish containing six hard-boiled eggs and swept all the eggs on to a plate in front of him.

"Hey, girl!" shouted the leading man. "Set up them eggs again. This guy's run pool!"

The Forces of Light

THE late Arthur McEwen, a famous journalist of San Francisco and New York, was once engaged in a political fight in the California city in which the better element was arrayed against the bosses and their followers, and the better element was getting decidedly the worst of it.

On election morning McEwen met the bishop of the Episcopal diocese and the Catholic bishop on the street, both of whom had been active in the movement. The Episcopal bishop asked McEwen how things looked.

"Very bad!" said McEwen. "I don't think we have a chance. I understand they are paying four dollars apiece for votes against us down in some of the districts. I guess we're beaten!"

Both bishops were properly aghast at this iniquity and proceeded on their ways. Presently the Catholic bishop met McEwen again.

"Don't be discouraged, Arthur, me boy!" he said. "Though it may be true the forces of darkness are paying four dollars each for votes, I have reliable information the forces of light are paying five!"

A Sacrilegious Sentence

SCHUYLER COLFAX, son of the late Vice-President, and now by way of being something in the camera business, was once in politics in Indiana and achieved the distinction of being elected mayor of South Bend.

As mayor, part of his duty was to act as police judge. A town sot had been brought before him many times. Colfax had been lenient; but finally he sentenced the sot to jail until such time as he should have broken into sizes suitable for use on the road a big stone that was in the jail yard, even if it took thirty days.

The sot got a hammer and went at it. While he was working a jailer dropped round to watch him.

"Say, Jim," said the sot, "what do you think of that squirt of a mayor of ours?"

"Oh, he's all right!"

"I know; but would it get back to him if I spoke me mind?"

"Nope. Go ahead."

"Well, I think he's got a fierce case of swelled head. Here he's sentenced me to break up in a month or so a rock that it took God Almighty three thousand years to make!"

Mexican Manners

FRANCIS I. MADERO, President of Mexico, is a small man and somewhat sensitive on the subject. Not long ago Madero and his cabinet were photographed. Abraham Gonzalez, Secretary of State, is a very tall man and stout, and he was required to stand next to Madero when the picture was taken.

Madero lifted his eyes to the top of the head of the great Gonzalez, observed the difference in stature and coughed slightly.

Then he said: "I feel that my size will not show to advantage unless we are seated."

"Your Excellency," replied Don Abraham, "if you could only stand on your wisdom we should all be dwarfs."

"Well said," Madero returned, "provided you did not stand on your courtesy at the same time."

And the cheers of the onlookers were mingled with the hoarse cries of the revolutionists.

The Downtrodden Automobile

By WILL PAYNE

ILLUSTRATED BY W. H. D. KOERNER

SOME automobilists will tell you that, in driving a car, the chief difficulty is with tires; but they are mistaken. The chief difficulty, as a matter of fact, is with people.

Here is a remarkable psychological fact: The horse admittedly is one of the stupidest of animals. His brain is almost impervious to anything less penetrating than a drill. You can drag him up to an ash-barrel by main force twenty times and demonstrate to him beyond question that it is an inanimate, stationary and absolutely harmless object. Yet the next time he sees it he will again mistake it for the upreared head of a pursuing glyptodon and jump the fence. Living in a literary age, he has not yet learned that a piece of paper fluttering along the road cannot bite him. No matter how thirsty he may be, he never knows whether it is you or himself that is to drink out of the bucket you hold up to him; so he sozzles half of it on you and drinks the rest.

Try to Run in Both Directions at Once

Practically all over the United States in the last five years, however, horses have become used to automobiles; though nowhere in the United States, so far as I am able to learn, have human beings really become accustomed to them.

There may be a few remote and backward localities where the automobile is still an incomprehensible phenomenon to the average horse; and anywhere there may be a very few thoughtless colts, or a very few senile old elder statesmen of horses, with brains long since completely ossified, who don't know what to make of a self-propelling carriage. Broadly speaking, however, horses everywhere now have the automobile firmly settled in their minds as a powerful, heavy, swiftly moving vehicle that is perfectly harmless if given any sort of chance to get by, but highly dangerous to any living obstacle that obstructs its path.

If you happen to drive a horse in the country no doubt you have noticed that usually the horse is aware of an approaching machine before you are. He pricks up his ears, gives his head a slight toss, steps a bit more briskly. He has caught the distant sound of a horn or a muffler cut-out before you heard it, or he has seen a moving veil of dust along the crossroad. He isn't afraid of automobiles, but he keeps a sharp lookout for them.

People Who Play Tag With Motors

HOW different from the horse, in this respect, are many human beings. The difference is painfully impressed upon any one who drives a car anywhere. In every city and village of the land he will encounter, at frequent intervals, members of his own species who cross the road, or stop in the middle of it, with their eyes upon the clouds, their ears out of commission and their thoughts far away, exactly as though no vehicle moving faster than a hearse or more formidable than a toy express wagon had ever been heard of.

There are no accurate statistics on the subject; but I am satisfied that the number of foot-passengers over the United States who wander in front of moving automobiles in the course of a year would compare favorably with the popular vote for Mr. Taft at the last presidential election. As a matter of fact, I myself am that wandering foot-passenger at least twenty times a year.

In this matter of tempting involuntary suicide there seems to be very little difference—relatively to population—between city and country. No hamlet is too small to contain an inhabitant who will lose himself in a pleasant daydream in the middle of the road; or even to contain two women, with a baby in a perambulator, who remain deaf to repeated blasts of the horn until the car has turned to the right in order to pass them—whereupon, with one impulse and with amazing agility, they scream, seize the perambulator and rush to the right also. On the other hand, in the city of New York, except where crossings policemen are stationed, the absent-minded pedestrian brings the driver's heart into his throat and unseemly language to his lips at tolerably regular intervals.

With foot-passengers, probably the horn is a hindrance rather than a help. Absent-minded ones never hear it until the car is close at hand. Its only effect is to make them lose their wits and run in the wrong direction, or else try to run in both directions at once. Foot-passengers have been urged, in tons of literature, first, to keep a reasonable lookout for automobiles; next, upon the approach of one, for Heaven's sake to take up a definite line of action and stick to it. Too often instinctive memories of childhood recur to the pedestrian's mind and he acts as though it were a game of blind man's buff or of pom-pom-pull-away, his rôle consisting in trying to confuse the driver by dodging first one way and then the other.

In the city—for children at least—there are more mechanical helps to getting in the way, such as roller skates, toy automobiles propelled by the foot, and bicycles. The first two especially are extensively used by young children and are seldom under good control. Indeed, elderly gentlemen and ladies are continually getting their shins barked and tempers ruffled in collisions with them. When a child on one of these imperfectly controlled devices gets in the way of an automobile something far more serious than a ruffled temper is likely to result.

Children are even more apt than grown people to lose their presence of mind in an emergency; and when one party to an impending collision has lost his wits the difficulties of the other party are really staggering. For example: a car was traveling along a country road in Illinois at not more than fifteen miles an hour. A boy on a bicycle turned into the road round a clump of bushes a hundred yards or more ahead. There was plenty of room to pass; but after a moment the wheel began wobbling alarmingly toward the wrong side of the road. Evidently the boy was seized with stage fright and had lost control of the wheel. Quick work brought the car to a dead stop just a second before the boy ran plump into it. If the car had been moving at the rate of only five miles an hour he would have been badly hurt.

The duty of avoiding pedestrians rests, of course, upon the driver of the car; but pedestrians should endeavor to make the discharge of this duty as easy as possible, partly because many other duties rest upon the driver.

When you pay your state license fee and get the official number plate, without which you are not permitted to run at all, you usually receive also a neat little pamphlet containing the automobile laws of the state. You find you must have official number plates, one at the front and one at rear of your car—the rear one so placed that the tail-light will shine on it at night. During certain hours you must have a white light at the front of the car and a red light at the rear. The maximum speed at which you may run in the country and within incorporated towns or cities is prescribed. You must have certain brakes and see that they are always in good working order. If you approach a horse-drawn vehicle and the horse seems nervous you must slow down; or—in some states—if the horse is really fractious and a woman is driving, you must, upon a signal from the driver, stop your car, dismount, approach the hysterical beast, soothe him and lead him safely past the object of his suspicions. The law doesn't say what shall happen if the horse declines to be soothed but plants his hoof in your stomach instead. Fortunately you don't need any law to tell you that.

I don't know but there are states where you must also drive the horse home, unharness, feed, water, curry and bed him down for the night, and leave him your calling card; nor do I know why any state should require you to enter into intimate personal relations with a perfectly strange horse simply because he is afraid of automobiles and consequently not fit to be driven by a woman upon any public road.

Such are some of your duties and responsibilities as driver of a car. If you look through the law to see what duties and responsibilities other users of the road owe to you, usually you will find all the law requires of them is to give you a fair share of the highway. Thus the law will say that if an automobile wishes to pass a horse-drawn vehicle going in the same direction the driver of the car shall blow his horn and the driver of the wagon shall then turn out to the right, giving the car room to pass—provided, of course, there is room for two vehicles at that place in the road. This, usually, is all that the law requires of horse-drawn vehicles; and rather extensive inquiry enables me to say with confidence that nearly everywhere drivers of horse-drawn vehicles obey the law in this respect or ignore it according to their personal feelings.

It is well to acknowledge at this point the familiar fact that there are hogs in automobiles—rowdies, drunk or sober—who run [illegible] ing whatever [illegible] people's rights [illegible] venience. The [illegible] of people driving and owning cars who should [illegible] garbage wagons is positively large, yet relatively [illegible] They constitute a troublesome minority, but it is a [illegible] small minority. The great majority of cars are operated carefully and with due regard for other people on the [illegible]

It is true, too, that a majority of horse-drawn [illegible] are driven with decent regard for the rights and [illegible] ience of other people, including people in automobiles. [illegible] there is another class of horse-drivers, and positively [illegible] large one, that really doesn't know that an automobile has any rights whatever upon the road. I have [illegible] than one driver assert, with an air of great virtue [illegible] always refused to give the road to a car. His principal notion was that, as automobiles sometimes frighten horses a good driver should do everything in his power to [illegible] courage their use. Then, of course, there is the [illegible] wagon-driving hog who objects on principle to anything [illegible] enjoying anything that he doesn't enjoy. If he can [illegible] your car trailing his wagon at low speed over [illegible] three miles of narrow road he is as nearly happy as a [illegible] constitution ever permits him to be.

With due regard to the vast number of courteous [illegible] drivers, there is still, I am convinced, much more [illegible] hogging by wagon-drivers than by car-drivers. The [illegible] that will not give half the road is a rare exception. [illegible] afternoon's drive in almost any part of the country [illegible] hardly fail to find you blanketed at least once or [illegible] behind a wagon that could easily let you pass by [illegible] over two or three feet—but will not. The law says [illegible] must; but, in fact, it doesn't.

Careful Driving the Important Thing

YOU have learned from your pamphlet what the [illegible] requires of you; but you have still to learn what [illegible] local authorities require—for unfortunately some [illegible] after having prescribed reasonable speed limitations [illegible] ought to prevail everywhere, permit any city, town, [illegible] or hamlet to set up such speed limits as its rude fancy [illegible] dictate. It seems to be a tolerably general rule that [illegible] more insignificant the town the more unreasonable [illegible] speed ordinance. There are spots on the road that [illegible] would hardly know for towns at all except for [illegible] reading: Speed Limit for Automobiles Eight Miles [illegible] Hour.

Experience has shown that a carelessly driven car [illegible] fifteen miles an hour is much more dangerous to [illegible] occupants of the road than a carefully driven car [illegible] thirty miles; in short, that liability to accident is [illegible] mined by the relative care with which a car is [illegible] rather than by its speed. So, generally speaking, [illegible] munities that [illegible] had the great [illegible] experience with [illegible] mobiles insist [illegible] skillful driving [illegible] allow much [illegible] in the matter of [illegible] For example, the [illegible] of an Eastern [illegible] where there is [illegible] motoring says:

Then, of Course, There Is the Plain Wagon-Driving Hog

"No person shall operate a motor vehicle over any public highway [illegible] or at a greater speed than is reasonable and proper, having regard to the width, traffic and use of the highway, the rate of speed exceeds twelve miles an hour in the [illegible] settled or built parts of any [illegible] town or village; or eighteen miles an hour in the [illegible] or not thickly settled parts of cities, towns or villages; twenty-five miles an hour in the open country, such rate of speed shall be *prima facie* evidence that the person operating such car recklessly—and the burden of proof shall be upon him to show that such rate of speed was not greater than was reasonable and proper."

In contrast with this, Congress some years ago set the country a bad example by prescribing a ridiculous speed code for Washington. It says that no motor vehicle shall be driven upon any street or avenue of the city at a

Digitized by Google

The Law Doesn't Say What Shall Happen if the Horse Declines to be Soothed

greater than twelve miles an hour; that it shall not be driven across any intersecting street at a speed greater than eight miles an hour; that it shall not turn the corner into an intersecting street at a speed greater than six miles an hour. Then it describes about a dozen patches in the city within which no motor shall be driven faster than four miles an hour.

A motor driver who attempted to obey these absurd regulations would need to carry a chart of the city on his windshield—keeping one eye on the chart, the other on his speedometer, and trusting to luck to avoid running into anything. As a car is either crossing intersecting streets or turning corners most of the time, its progress under this code would be a series of jerks.

Of course these ridiculous regulations are constantly violated. There is no probability that a solitary automobile was ever operated upon the streets of Washington in compliance with them. The situation is quite tolerable for motorists in the city simply because the police use vastly greater intelligence in enforcing—or not enforcing—the law than its framers displayed in passing it. The law, in short, gives the police a club which they use, in the main, with good sense and discretion. If they catch a man on the wrong side of the street or cutting across a busy corner instead of turning square they arrest him for violating the speed law.

Washington, by-the-way—or rather its environs on the Maryland side of the river—has been a dark and bloody ground for the motorist. As the District of Columbia is only ten miles square, no Washingtonian can do any driving to speak of without running across the line into Maryland; and time was when he could hardly run into Maryland without also running into the belligerent arms of some local official who had nothing much to do except bag Washington automobiles.

A favorite drive for Washingtonians is the Conduit Road, running a dozen miles up the Maryland side of the river to Great Falls. This is a military road, built and maintained by the Federal Government, so it is in excellent condition, and it passes through a lovely country. This road runs for a few yards through a village which consists principally of scenery and contains some two hundred inhabitants.

The Feud Between Maryland and the District

THIS village, however, is a duly incorporated community, armed with power to make local laws and to enforce the same. In time the stream of automobiles passing to and fro—along a Government highway—suggested something in a judicial and executive way to this spot. The mayor appointed a police force which moved joyously into action. To say nothing of the *hoi polloi*, a fair proportion of Washington's most distinguished citizens were arrested for violating the speed laws in this place—until the puissant police force capped the climax by pinching the German ambassador, thereby insulting the Kaiser in the person of his representative and shattering the law of nations at one doughty blow. After that the automobile-trapping industry declined—as the Government owned the road anyway—and the village gradually resumed its normal relative importance in national and international affairs.

There is still a pleasant little automobile feud, however, between Washington and Maryland. It is the custom for one state to permit transient cars, duly licensed in another state, to pass over its highways. Maryland, however, refused to permit cars owned and licensed in the District of Columbia to run upon the roads of the state unless they also took out a Maryland license, paying the full fee and carrying a Maryland number plate. The District retaliated by refusing to permit any Maryland car to enter its borders unless it paid the District license and carried the District number plate.

The sheriff of a county adjoining the District displays patriotic activity in nabbing Washington cars that are without a Maryland number plate or that may be exceeding the speed limit, and for that purpose employs quite a force of deputies. Formerly the nabbed motorist was piloted to the county seat, though a visit to that village may have been quite inconsistent with his plans. Good nature has so far prevailed, however, that at present the motorist is permitted to hand twenty-five dollars in cash to the deputy, taking a receipt and continuing on his way.

On the other hand, the Washington police are often cheered by spying a Maryland car that is without a District number plate or that is traveling a bit too fast. In either case the enemy is promptly captured. This, of course, makes a pleasant game for the sheriff and the police, but it is rather inconvenient for motorists.

The experience of Washington, on the whole, is strictly typical. Probably there isn't a city in the country that hasn't its mean little neighbor, and some unfortunate cities have half a dozen of them—I mean suburban or outlying communities along popular lines of automobile travel that make a regular game of bagging motorists. Sometimes this is done for revenue only; sometimes it is inspired by dog-in-the-manager hostility to automobiles.

It is quite true that automobiles bring a certain inconvenience to people who are not using them—the same sort of inconvenience that a railroad train, a street car or a truck brings. It is certainly not safe now to let children play in the street or road where there is any automobile traffic. It is not safe for a grown person to cross the road without keeping awake and looking about. It is not safe to leave even a well-broken horse unhitched beside the road. It is not safe to drive a horse that is afraid of automobiles—especially if, as happens about eight times out of ten, the driver gets worse frightened and more rattled than the horse. Unless the road is well constructed with a view to withstanding automobile traffic, the heavy, swiftly moving wheels cut it up and raise a dust that blows over the lawn and into the windows.

All these things involve inconvenience as compared with the happy day when babes might toddle in the highway and a nervous horse had nothing more formidable than the grocer's delivery wagon to encounter. A casual glance at automobile statistics, however, will convince any reasonable person that these inconveniences are never going to be overcome by shutting out automobiles. They can be met only by accepting the gasoline carriage as a modern condition and adapting ourselves to it. For example, in the matter of roads, it has been found beyond question that a road scientifically constructed to withstand motor traffic will prove even more durable under such traffic than a horse-vehicle road will under horse-drawn traffic.

An English report to this effect was met with the cry: "But then, we shall have to build our roads especially for the purpose of automobile use!" Exactly! We shall have to build our roads for the purpose of carrying the sort of traffic that modern conditions impose. A highway that answered every purpose very well twenty years ago will not answer every purpose very well now. The steam-railroad bed and tracks that answered every purpose excellently twenty years ago wouldn't carry today's railroad equipment at all. The solution isn't in discarding the modern vehicle, but in building to meet it. So, also, with keeping children off the street.

Ten years ago, to possess or even to be seen in an automobile raised a presumption that one was a plutocrat; and it is notorious that nobody cares what happens to a plutocrat so long as it is something disagreeable. By a logical deduction, nobody cared what happened to automobiles. It was only about a dozen years ago that Chicago park commissioners sought to bar them absolutely from the city's parks and boulevards.

Displays Patriotic Activity in Nabbing Washington Cars That are Without a Maryland Number

In the last two years three hundred and seventy-five thousand cars have been built and sold in the United States, with practical certainty that the output for 1912 will break the record. This means, of course, that there is no more relation between automobiles and plutocrats than there is between top buggies and bank presidents. There can hardly be less than seven hundred thousand cars in use in this country—say fifteen times the number of passenger cars of steam railroads. There is scarcely a village that hasn't anywhere from a dozen cars up. They are found in every farming community. Riding in an automobile is not a more novel or exceptional experience than riding on a railroad. It has undoubtedly become the greatest outdoor recreation, to say nothing of the numberless business and professional uses that it serves.

The facts in the case, however, have scarcely been comprehended or duly digested as yet by the law and the public mind—even though the public mind may just have come in from a pleasant little spin in its neighbor's car. There is still, broadly speaking, some disposition to regard the automobile as an interloper that comes in merely on sufferance and at its own peril. There is still a tolerably general assumption that, in case of an accident, the car was to blame.

"I had four reputable eyewitnesses," said the accident-insurance lawyer, "who swore that the man stopped abruptly while crossing the street, then turned round and walked squarely in front of the car, though the chauffeur had sounded his horn. The bill at the hospital was two hundred and fifty dollars and the jury soaked me for twelve hundred besides." This happens nearly every day.

Automobiles are very properly required to carry headlights to see by and tail-lights to warn anything behind them of their presence; but almost nowhere are other vehicles required to carry any light at night, though they ought to wherever automobiles are on the road—as anybody who has seen a black buggy suddenly resolve itself out of a clump of black foliage can testify. Drivers of other vehicles should be supplied with neat little editions of the road laws and held quite as accountable for obeying them—including the injunction to turn out when a car signals—as automobile drivers are.

And, Except for Downright Scorching, There are Practically No Speed Limits at All

Of course conditions have improved. In a number of states the power to fix absurd speed limits has been taken away from the local authorities, the state itself prescribing the lowest speed rate that any town or village can enforce. No doubt this will become the universal rule and all low-speed ordinances will disappear.

Administering "Justice" by Mail

THE suburban and constabulary pastime of bagging motor tourists will probably disappear also. It is not so popular now as it used to be. In at least one recent case an automobile club succeeded in nabbing the nabber—a village justice of the peace. This magistrate evidently had no constitutional prejudice against modern improvements, for he conducted his court on the celebrated mail-order system. Having jotted down the number of a car that he thought was going too fast, he got the owner's name and address from the records of the state that issued the car license, then sent the owner a letter:

"*Dear Sir:* On July twentieth, between the hours of twelve and two o'clock, your car passed through our town on the main street at a speed of twenty miles an hour. Appear at my office on July twenty-ninth and pay a fine of fifteen dollars and costs, amounting in all to sixteen dollars and thirty-five cents, and avoid further trouble.

Administering justice by mail did not meet the approval of higher judicial authority, however, and the magistrate was bound over to the grand jury.

A justice of the peace on a popular motor road in Pennsylvania has adopted a system of notifying speed ordinance violators, but he doesn't impose a fine at long range. He uses a neatly printed blank, like the following:

Mr. —— ——:

Dear Sir: I have issued a warrant for your arrest, on oath of a Special Officer of this Township, for violating the Act of April 27, 1909, by driving a motor vehicle, License Number ——, on the highways of said township, at a rate of speed of —— miles an hour on the —— day of —— 191—, at ——, going ——. If you will voluntarily appear for hearing I will withhold service of warrant. Kindly answer this notice promptly and I will set time.

It is significant and encouraging that law and custom accord the most liberal treatment to automobiles in those

ROCHESTER, N. Y., *The Kodak City.*

communities where they are most used; in short, the more people see of motor cars the better they seem to think of them. Nowhere else in this country, of course, are there so many automobiles as upon the streets of New York. The number of cars in use in the city is about fifty-five thousand; and, except for downright scorching, there are practically no speed limits at all.

The law of the state of New York says: "Every person operating a motor vehicle on the public highways of this state shall drive the same in a careful and prudent manner and at a rate of speed so as not to endanger the property of another or the life or limb of any person; provided that a rate of speed in excess of thirty miles an hour shall be presumptive evidence of driving at a rate which is not careful and prudent."

The state law also prohibits the local authorities, except in cities of the first class, from passing any ordinances, rules or regulations that prescribe a minimum speed below fifteen miles an hour.

New York's Example

This state law became effective in May, 1910. There is some question as to whether an old speed ordinance in the city of New York was repealed by it or is still in effect; but this is merely an academic question, for no attempt is made to enforce it. Thirty miles an hour in the city is a very common rate where there is a clear roadway. Everywhere south of Fifty-ninth Street, of course, speed is necessarily limited by traffic conditions; but all over the city the police pay no attention to any rate of speed which a reasonable and sober motorist would regard as prudent.

Downtown, in fact, the great job of the New York police is to keep traffic moving, and they feel much more kindly toward a vehicle that gets itself out of the way as briskly as possible than they do to a lumbering one.

New York has found by experience that setting a low-speed limit isn't the way to prevent accidents. Virtually all accidents, of course, are the result of carelessness, either on the part of the person driving the car or of somebody outside the car. Always excepting the drunken joy-rider—for whom nothing can be done beyond framing a pious hope that he will kill nobody but himself—there is no tangible relationship between speed and carelessness; in fact, a driver is more apt to slumber at the wheel when his car is going ten miles an hour than when it is going thirty.

I presume there are fewer automobile accidents in New York, relatively to the number of cars and persons on the streets, than in many localities that attempt to enforce unreasonable speed limits. It is a fact that few damage cases arising from such accidents get into court. City car owners, as a rule, carry insurance against liability to damages, and a good many cases, no doubt, are settled privately by the insurance companies; but, on the whole, New York, with its fifty-five thousand cars, gets on very reasonably and pleasantly with the automobile. The vigilant enemies of the machine are usually found in juxtaposition to the tall grass.

Bogus Gems

IT IS always wise, when buying a white topaz, to purchase it from a reliable dealer, inasmuch as rock crystal and even lead glass are often sold under that name.

Colorless beryl yields a very brilliant and diamondlike stone when properly cut. Indeed, many gems, and even phenacite and rock crystal, often passed in former days as diamonds, even under the scrutiny of experts—such exact tests as refraction and specific gravity being unknown until comparatively recent years.

No imitation of the diamond, however, is so brilliant as a skillfully cut piece of the kind of lead glass known in the trade as "paste." The play of color in these counterfeits is often very beautiful; but the glass "diamond" possesses no luster—this term being applied to the light reflected from the top surfaces of a gem. The flashes of light and color that give brilliancy come from the interior, being thrown from the rear surfaces of the stone.

The glass diamond is soft and is attacked chemically by a number of things with which it comes in contact by wear; for both of which reasons it soon becomes dulled.

The Senator's Secretary

AT THE exact moment an ordinarily astute politician or statesman, or that combination of both known as the friend of the people—indeed, I may say, at the exact moment a super-ordinarily astute person of any of the types above designated—takes over the job of managing the campaign of a candidate for the presidential nomination, he predicates all his public maneuvers and pronouncements on the assumption that the entire population of the United States—voters and non-voters—is aged a shade over seven years, but has not yet reached the full maturity of eight.

It has been so since managing campaigns ceased to be an avocation and became a vocation—a trade; and I suppose it will continue so until that day when the people shall take the task of picking out their president themselves instead of allowing their president to be picked out for them. At the present time the industry of campaign managing is flourishing as it never has flourished before. Campaign managers are so thick in Washington you step on their toes every time you cross a hotel lobby, and bump into them whenever you try to get into a newspaper or correspondent's office. They are to be found in every corner and cranny of the Capitol, lurking in the offices of the White House and hanging on the straps in the street cars. Washington people wondered at the large number of new office buildings recently built in that somnolent city. The reason now appears—they were erected for the purpose of housing presidential headquarters. New York and Chicago have their full share also; but the business has reached the full flower of its perfection in Washington.

The functions of a campaign manager are varied—and important, of course. Principally he is supposed to tell other people to tell other people to tell other people what to do in order that right and justice may prevail, and his candidate for the highest office within the gift of the people—that's the official campaign designation for president—may be selected by the national convention and triumphantly inducted into the White House, there to furnish fat Federal jobs for all those who have sufficient strength to cash in the promises the campaign manager made. In reality, the campaign manager is an advertising agent—no more and no less. He gets information, and disseminates that information after his expert literary aides have put such interpretations and frills and embroideries and cold water on it as the circumstances may require.

Fashions haven't changed in campaign managing in the last forty years, except where the people themselves have changed them. The managers all operate according to a fixed procedure. Watch any half dozen of them at work and you will discover that, no matter whether one is directing the footsteps of a reactionary and another is guiding a radical, they both use the same methods; and, by the same token, both arrive at about the same results.

Charging the First Gun

This is the formula: Necessarily when a man aspires to be president he must let the people in on it—that is, he cannot be a passive candidate; for passive candidates garner few delegates. The call of the people for any man to go to the White House and direct the government is never so loud that its cadences do not have to be accentuated a good deal, so that enough may hear it to make it imperative. The job is not only to supply the call but to supply also the callers—that is, if the people will not rise and demand, they must have tacks placed in their chairs so they will rise and demand. To this end the campaign manager devotes his energy. He may have a few connections here and there that will enable him to do some manipulating; but his principal task is to advertise. That is why the campaign manager's first employee is a press agent. Next he hires a suite of rooms—if there is any money available. If he is cramped for funds he hires one room. If he has no funds he borrows a typewriter.

This is the initial stage—the invariable preparation. Then he announces, through the press agent, that the Honorable William J. Boogin has taken the management of the campaign of the Honorable Charles X. Magoosh, and is quoted as follows:

"I have this day assumed the management of the campaign of the Honorable Charles X. Magoosh for the presidency. My candidate will undoubtedly be selected by the national convention as his party's standard bearer, for there is an insistent call from the people that this gallant leader shall take the helm and relieve them of the burdens that have been heaped upon them by the party in power."

Of course, if the party in power is the party of his candidate he will say his gallant leader is demanded by the people to correct the abuses that have crept into the body politic, to regenerate the party, make it truly representative of the people and carry out the policies of the Fathers and such Sons as may be in his faction. This attended to he lets go a column or so of resounding generalities about the strength of his candidate, the weaknesses of the other candidates; makes sweeping claims of all delegates in sight, and considers he has fired a heavily shotted opening gun.

After that he confers. The very best thing a campaign manager does is to confer. He will confer over the buying of a sheet of postage stamps, or the ditto of a state convention. He confers when he asks a visiting politician to luncheon, and he confers when he expresses an opinion of the weather. If so be you have ever been to one of these conferences, even an important one, you have discovered that nine times out of ten conferring consists of gossiping about chances with visitors, or in discussing ambitious claims made by ambitious politicians who have ambitions of their own.

All for the Peerless Magoosh

Then he "gets in touch." Getting in touch consists in writing large numbers of letters to persons who think exactly as he does, and being gratified in having his own brand of thoughts return to him as sage and non-partisan conclusions as to the outcome and chances. After he is in touch he proceeds to touch and be touched. He conducts a monumental correspondence, sounding public sentiment. The public sentiment he sounds is always the kind of public sentiment he desires to have resound pleasantly. The simple expedient of going elsewhere than to favorable sources to ascertain sentiment has not yet occurred to a campaign manager. Sometime it may, but it hasn't yet. He doesn't want bad news. What he wants is good news; and he fishes for that kind.

If, perchance, he gets no good news—or no news at all—he is forced to make some. Here is where the literary director comes in. It is as necessary to advertise a candidate as it is to advertise a brand of soap. So the literary director hammers out a lot of guff about the particular candidate he is booming; and they get as much of it printed as they can. The literary director shows conclusively there is a great wave of enthusiasm sweeping over the country for the peerless Charles X. Magoosh, who is certain to be nominated. Though it may be that Mr. Magoosh has, as yet, attained no delegates, still there is an overpowering sentiment for him among the people, and the day of his triumph is near at hand; or if he has picked up a delegate or two that cheering fact is kept prominently in the foreground. Also, if there is anything in the careers of the opposing candidates that can be worked over to their disadvantage the working over is done, and all the horrible details are laid bare before the people.

Tabulations are made. The library of a campaign manager consists of a political almanac. With that, and the guesses of the politicians in various localities, he makes table after table showing how it is impossible for his man to lose. It is a simple and satisfying employment. A state leader writes and says—or comes in and says—there is nothing to it. "The Honorable Charles X. Magoosh will have the delegates from our state; but, to be conservative, allow the Honorable Patrick Q. Bolus, the principal opposing candidate, four, say. Of course he won't get them; but, being conservative, it is certain the Honorable Charles X. Magoosh will have all the rest." The campaign manager rubs his hands and puts down all but four—and the literary director writes a piece about it. Next morning the public is informed that such and such a state will undoubtedly give Magoosh all its delegates, or nearly all,

"You'd better not bay less than half-a-dozen!"

YOU can buy a powerful six-cylinder Mitchell car for $1750; smooth running, easy riding, simple in construction, little trouble to care for and economical to operate.

High prices for automobiles are relics of the days when the manufacturers were making expensive experiments, and buyers were bidding high for cars that would come back as far as they would go out.

Mitchell cars today will go as fast and as far and ride as comfortably as cars that cost three times as much; they are beautiful in appearance and are built for the man who can't afford to make a mistake.

Make a list of the things you want in a car, and see if you don't find all of them in the Mitchell cars. Two sizes in the flexible six cylinder; two splendid four cylinder models, and a handy and reliable two passenger runabout; each one ideal in its particular field of usefulness.

For 77 years our vehicles have given satisfaction; they'll continue to do so for another 77 years.

Buying a Mitchell means knowing what you are getting.

Seven Passenger Mitchell-Six

Horse Power	60
Cylinders	6

and this indicates Magoosh's triumphant nomination; in fact, that nomination is a foregone conclusion.

The campaign manager writes letters and confers; collects money and confers; sends telegrams and confers; makes calculations and confers; receives delegations and confers; gives interviews and confers; is secretive and confers; is talkative and confers; makes claims and confers; sees the handwriting on the wall and confers; and holds conferences and confers. Moreover, he always confers with the conferees who tell him what he wants to know. The idea of conferring with people not in his own circle rarely occurs to him. He might hear something that would annoy him if he did.

Thus it goes until convention time. Then the campaign managers move to the convention city and there is a frenzy of conference. After the convention all but one of them give out interviews saying they bow to the will of the people—that is joyous, that will-of-the-people line in reference to a national convention—and will loyally support the nominee. Then they go home and try to get on the handwagon.

The point of it all is that ordinary campaign managing is so bogus it is silly. The stuff they put out for advertising purposes and to influence the people is, as I have said, predicated on the assumption that the entire voting population is not much over seven years of age. The one great, basic fact in the politics of this country that has not yet percolated into the minds of the tribe of campaign managers is this: You can foster a political sentiment and aid in its growth, but you cannot create a political sentiment. The people of this country are much better judges of men than they are of measures; and, even if their desires are thwarted by a nominating convention, they never fail to show—on election day—just what they think and how they think. For example, there was no popular demand in the Democratic party for the nomination of Judge Alton B. Parker for president in 1904. The demand for Parker was absolutely artificial, created by a little coterie of men who had money.

Trained Troupes of Press Agents

There are, of course, certain details of organization that must be attended to; but at the present time the campaign-managing fever has become hectic. A dozen or so men are sitting at desks in various office suites and managing a dozen or so candidates—acutely mysterious, intensely solemn, supernaturally strategic, bogusly optimistic—with the grave concerns of the salvation of the Republic on their shoulders, borne down by a burden of heavy responsibility.

What they are trying to do is to get some advertising for their men. The real campaign managers, in each instance, are the fellows back in the state who know what is doing and what is to be done, and who can do what is necessary or can try intelligently—and have, or hope to have, the machinery to work with. Still, it appears, we must have them! The people must be told what to think and what to do, however perplexing it may be to the people to have a dozen or so trained troupes of press agents yammering at them each day that the only way to keep the Ship of State off the rocks is to take the candidate of the troupe that has the stuff in the paper they are reading at that particular moment. And there is this to be said about it: It may so happen that the people of this country will allow themselves to be told what to think as to candidates; but it is certain they will do their own thinking on election day, no matter how many campaign managers there are or will be. It may still be true that a campaign manager, or a coterie of them, can nominate a particular candidate—and it probably is true; but it has ceased to be true that a campaign manager, or a coterie of them, can elect a particular candidate on their say-so. Those days are gone; and the quicker the professional politicians and the Wall Street crowd, and all the other influences hitherto so powerful in presidential politics, wake up to that situation the happier they will be.

At that the campaign managers are entitled to some sympathy, for they have their troubles. Indeed, it is gradually dawning on all concerned that the ideal presidential candidate to manage would be a deaf-and-dumb man who never learned to write, and who was reared to innocuous manhood in a hermetically sealed cave.

Ask for the heel with the RED plug

The Big New Idea in Rubber Heels

You know the kind of rubber heels that start *off* all right.

That do good work for a while—a month or so, perhaps—

And then "go dead"—useless weights on the feet.

Spring-Step Rubber Heels

start with more spring and life than any other rubber heel you ever saw.

And they retain every bit of their *lift* and buoyancy right down to the last day you use them.

They *STAY ALIVE*—and outwear leather heels.

That's the big, new idea in rubber heels.

We've inserted in each heel the Patented RED Friction Plug—you can't slip on them if you try.

DEFAULTED BONDS

By Roger W. Babson

IN A PREVIOUS article I remarked that an investor should not expect more than 4½ per cent on an investment unless he renders some distinct service other than simply loaning the money. Since writing the above I have been asked how an investor can render such additional service as would entitle him to a recompense over and above said 4½ per cent. In reply I will state that the simplest way for the investor to attempt to obtain more than this normal rate of interest is by assuming some risk—and, therefore, the greater the risk the greater the reward for the lucky ones. For this reason 6-per-cent bonds and 7-per-cent preferred stocks are offered to investors at about par. In such cases the investor is receiving about 4½ per cent for the legitimate use of his money, just what he would receive on an investment that is absolutely safe, and is given in addition the balance of from 1½ per cent to 2½ per cent for the risk he is taking in buying an inferior grade of securities. I personally, however, do not believe in the investor's attempting to obtain a high rate of interest by assuming any amount of risk; and in my mind it is a great mistake for the investor to attempt to obtain a high rate of interest by buying such unseasoned bonds and preferred stocks.

In fact, in one article I stated that the real legitimate method of obtaining more than 4½ per cent with safety is by studying fundamental business conditions and purchasing only during panics and other periods of business distress, when money is in great demand and securities are being sold at a discount. A man who buys during a panic performs a distinct service and should receive a profit for said service in addition to a normal rate of interest. A man who accumulates money when money is a drug on the market and then lets it out in panicky times, when money is in great demand, performs the same service to the community that the iceman performs who stores up ice during the cold, disagreeable winter, when it is a nuisance, in order to have it for use during the hot summer weather. Therefore, up to the present time, I have mentioned only this method of obtaining more than simple interest on one's investment. In other words, I have stated that a small investor should either be satisfied with about 4½ per cent, or else he should study conditions and confine his investing only to times of panic, which occur about once in two or three years.

The Bondholders in Control

There is, however, an additional method by which an investor may be morally entitled to a higher rate of interest, and that is in connection with the purchase of defaulted bonds. As readers know, about three per cent of the corporation bond issues offered to the public default—that is, the corporations issuing them are unable to pay the interest thereon at some period. Sometimes this default occurs within a year or two from the time they are issued and in other instances not until several years afterward. Usually, however, the default comes within the first five years; and it is owing to this that we refer to seasoned bonds, meaning bonds that have been issued and the interest regularly paid thereon for over five years. Of course when there is a default in the interest on the bonds, the stock theoretically is of no value; and legally the stockholders should lose everything before there is a default in the bond interest. Unfortunately, owing largely to the fact that so many lawyers devote their energies to the miscarriage of justice rather than to the execution of justice, this usually is not the case. Nevertheless, as an illustration, it may be assumed that when bonds have defaulted the stockholders have become tired of paying additional money, and have relinquished control of the property, deciding either to take a total loss or else be satisfied with what the bondholders decide to do after the bondholders have satisfied their own claims. Simultaneously with the stockholders relinquishing their claim in the corporation the bondholders assume control; and when bonds are in default it may be assumed logically that the bondholders are controlling the property.

If all the bonds of a corporation in default should be owned by one man it would be necessary simply for this one man to assume control of the corporation, the same as the mortgagee takes possession of a house upon which he holds a mortgage when the interest is in default. In practice, however, a bond issue of a given corporation is scattered among hundreds and perhaps thousands of individuals, located in different parts of the world. Thus, it is necessary for some of the larger holders to unite and form a committee of about five persons who stand well in the community and are known to be men of ability and integrity.

The Deposit Agreement

In order that their action may be as unanimous as possible, this committee asks for a deposit of all the bonds of the issue; and the small investors with only one bond are therefore urged to deposit with the committee in order that the committee may represent all the bonds of the issue. Such a committee usually assumes no liability, but accepts the deposit of these bonds under a trust agreement, or deposit agreement as it is usually called, which shows just what rights the bondholders still hold, what the committee is to attempt to do and what position the trust company assumes in the matter. I say trust company, because the committee as individuals will not assume the responsibility of holding all these bonds, but insists that some trust company shall be the depositary. Usually the same trust company is selected as depositary that is also trustee for the company; but this is not a necessity and often a different trust company is selected.

It, therefore, will be seen that the four parties to a defaulted bond issue are: first, the corporation, which for practical purposes need not be considered; second, the bondholder, who has money invested; third, the bondholders' committee, which is protecting the bondholders; and fourth, the trust company, which holds the bonds or stands between the bondholders and the bondholders' committee.

Of course, if this trust company is a different one from the trust company that is trustee for the mortgage, there are five parties; for in such a case there would be two trust companies interested in the reorganization.

Naturally, when the bondholder deposits his bonds with the trust company for the benefit of the committee, such a bondholder wishes some receipt; therefore the trust company, on behalf of the committee, issues a receipt, and the following is the reading of a typical receipt:

No. CERTIFICATE OF DEPOSIT OF _____ RAILROAD COMPANY $ FACE VALUE OF BONDS.

First-Mortgage Refunding Four-Per-Cent Gold Bonds

Issued under the Mortgage dated April 1, 1901, to The _____ Trust Company, of the City of New York, as Trustee, with coupon due July 1, 1910, and all subsequent coupons thereto attached, deposited under an Agreement, dated May 4, 1910, between depositors of the above-mentioned Bonds and _____, _____, _____, _____ and _____, the Committee named in said Agreement.

The _____ Trust Company of New York, as Depositary,

Hereby certifies that it has received from _____ First-Mortgage Refunding Four-Per-Cent Gold Bonds of _____ Railroad Company, at the par value of _____ Dollars,

With coupons thereto attached as above stated; said Bonds having been deposited subject to the terms and conditions of the above-mentioned Agreement, dated May 4, 1910. The holder thereof by receiving this Certificate consents to and is bound by the provisions of said Agreement, and is entitled to receive all of the securities, benefits and advantages to which the depositor is or may become entitled pursuant to the conditions of said Agreement; or the said Bonds so deposited, together with the coupons thereto attached, may be returned to or withdrawn by the holder hereof in accordance with the terms and provisions of said Agreement upon presentation and surrender of this certificate, duly indorsed.

Hats that lead —backed by a guarantee

Do you know that when you buy a *von Gal made Hat*, a positive binding guarantee goes to you with it? Do you know that the dealer who sells it does not want you to keep the hat unless the quality is right in every particular? And in that assurance we stand behind the dealer who sells

von Gal made Hats

"Correct Styles for Men"

This means that the hat must be right to the minutest detail before you buy. Careful making, rigid inspection, must make us sure that every hat we send out is worthy of our guarantee.

von Gal Styles are correct always—the highest embodiment of hat design and skill in manufacture. Quality of manufacture means that they *stay right*—that they *continue* to give you satisfaction. Whether your choice is a soft or stiff style, it will repay you to insist on this hat—a hat that is guaranteed, but that is so good that it does not *need* any guarantee.

The new spring styles include the smartest and best rough, scratch and bright finish effects. You can't fail to like them.

Prices $3, $4 and $5. At your dealer's, or if he cannot supply you, write for Spring and Summer Style Book E, and we will fill your order direct from factory if you indicate style wanted and give hat size, your height, weight and waist measure. Add 25c to cover expressage.

By _____
Vice-President.

_____
Secretary.

I mention this receipt because, when purchasing a defaulted bond, the investor really does not purchase a bond, but rather one of these receipts. Therefore theoretically we are considering in this article the receipts for defaulted bonds rather than defaulted bonds proper.

As above suggested, it is often the case that an investor may render a service by purchasing these receipts. This will entitle the investor to a profit in addition to the interest on his money; and if this is the case there must be some reason therefor. Briefly the reason why this is possible is because the ordinary individual does not like to hold these receipts; and consequently an investor is compelled to dispose of them for less than their intrinsic value. There are various reasons why the average investor prefers to take a loss on defaulted securities rather than hold the receipts; and among these reasons I mention the following:

1. No such receipts carry interest in the ordinary sense of the word. Until a bond defaults it is sold with interest—that is to say, if you purchase, on April first, a $1000 4-per-cent bond, with interest payable January first and July first, at 101, you will pay $1010 for the face of the bond and in addition three months' accrued interest at 4 per cent, which will be $10, making $1020 in all. If, however, this bond should default, it would no longer be sold with interest. Thus, so long as one holds such a defaulted bond or the receipt issued therefor, he apparently is losing interest. In other words, assume that the above-mentioned 4-per-cent bond should default and the price drop to 80, and continue at this figure. After this has happened, if one should desire to sell the bond or purchase more, it would make no difference what month he purchased it or sold it—there would be no accrued interest to pay, the total amount being simply $800 "flat."

Interest Lost on Defaulted Bonds

Now as money is worth at least 4 per cent, it is apparent that the investor of $1000 in defaulted bonds is losing at least $40, or 4 per cent every year that he holds them. Whether or not this is true, it is apparent that, if the price of these certificates is to remain fixed at said 80 for two or three years, while the property is being reorganized, it certainly would be advisable for the holder to sell his certificates immediately after default and then buy them in again shortly before the reorganization plans are announced. He then could be having his money on deposit in some bank meantime and drawing his 4-per-cent interest, thus saving 4 per cent a year. Of course, as I shall show later, this does not always work out this way; but in many instances it does thus work out, and in all instances the holder of a receipt is obliged to forego receiving the interest each six months, which may be a hardship for many and makes these receipts somewhat unpopular with all.

2. Another reason why the average investor does not like to hold receipts for defaulted bonds is the fact that in many reorganizations an assessment is called for. This usually is because, when the bondholders are obliged to take over the operation of a corporation, they find the treasury devoid of working capital. As working capital is absolutely necessary, the bondholders, through receivers who represent them, apply to the court for permission to issue receivers' certificates in order to raise money for necessary working capital, repairs, and so on. Though receivers' certificates are classed among the very best of investments, combining as they usually do absolute security, a short-time maturity and a fair rate of interest, yet they are dreaded by bondholders. The reason for this is because receivers' certificates take precedence of bond issues and must be paid before the bondholders receive anything for themselves. Now, in order to pay these certificates, the money is usually be raised only through an assessment. Of course these assessments are usually levied on the stockholders—possible—the bondholders saying to the stockholders: "If you will pay these certificates and furnish additional money to put the company on a sound financial basis, we will continue to hold our bonds and will return to you the control of the company." In such a case, though the old stock is entirely wiped out, new stock is given to the stockholders, who will pay their proportion of the assessment.

Unfortunately there are many instances when the stockholders will not pay the assessment and prefer to take a total loss than to bother with the corporation any further. In such a case the bondholders are obliged to assess themselves. This is usually done by wiping out the old bond issue and giving new bonds to such bondholders as will help on the assessment.

The Market Limited

3. These receipts issued for defaulted bonds are usually not payable to bearer and must be forwarded to the trust company for transfer whenever they are bought or sold. In certain receipts listed on the New York Stock Exchange this is not the case, as such receipts are often payable to bearer; but very few receipts issued for defaulted bonds are listed on the New York Stock Exchange. Though this is really no objection and is no more of an inconvenience than the transferring of stock, yet for some reason or other people do not like to hold these receipts which are not payable to bearer. Possibly they do not care to have it known that they are holders of defaulted bonds; but, whatever the reason, there is a prejudice among investors against these receipts. They also are rather unsatisfactory collateral. Owing to the possibility of assessment and the non-payment of interest, banks prefer not to loan upon them. This tends to prevent speculation in the receipts and limits the market. Unfortunately speculation tends to increase prices rather than to lower them. Consequently a security that is not manipulated for speculative purposes often sells for less than its intrinsic value.

Of course there are also other reasons why these receipts are not popular, some of these reasons being real though psychological. For instance, very few securities are considered at the fair average intrinsic value. It is human nature either to be hopeful or to be fearful. Consequently most securities are purchased with the hope of increased prosperity or else are sold on account of fear of disaster. We are not calmly to consider a proposition on its merits—and either we are enthusiastic or else pessimistic. So long as a bond pays interest regularly we all talk enthusiastically and think well of it; but so soon as it defaults on its interest we all become pessimistic and think evil of it. Consequently, for this and the other above-mentioned reasons, defaulted bonds and the receipts issued therefor usually sell below their intrinsic value.

4. There also is one more reason why this is so—namely, that it is much more difficult to obtain information relative to companies in the hands of receivers than is the case with going concerns. Bondholders' committees usually operate on the "star chamber" principle and often are very loath to give the bondholders the information which is their due. This, to my mind, is absolutely wrong; for certainly the members of a bondholders' committee are purely the servants of the holders of bonds deposited therewith, and it seems absolutely wrong that the committee members should be so secretive.

The very fact that the various disadvantages above mentioned cause the bonds to sell below their intrinsic value often makes such bonds and their receipts attractive to investors who have courage and individuality. Some of the advantages may be briefly summarized as follows:

1. Take the question of interest. In this instance. Though no interest is regularly paid upon such receipts, yet, if the property is good for anything more than the face value of the bonds, the bondholders will collect this interest at the time of the reorganization. For instance, I have in mind an issue upon which no interest has been paid for four years—but the property underlying lien to two junior issues. Now when the reorganization is finally completed either the stockholders or else

IT MUST BE GOOD VARNISH

WHEN a man's building burns and he goes out of his way to hunt down exactly the same varnish as used on the building ten years before, it's strong evidence that the varnish must be good — unusually good.

That happened at the time of the big fire at Chelsea, Mass.

The varnish was one of Berry Brothers' Architectural Finishes.

Some people have an idea that one varnish is about as good as another. Yet experienced men, who have had the opportunity of studying various makes under all conditions, realize there's a wide difference — and that it pays to get the best, regardless of the gallon-price or the difficulty of getting it used.

BERRY BROTHERS VARNISHES

ANY dealer or painter can supply Berry Brothers' Architectural Varnishes and will gladly get them for you if he does not carry them in stock. You can always tell them by the well known label on the can, used by us for so many years that it is virtually our trade-mark — your protection against substitution.

The Berry Brothers' Line includes every varnish, shellac, or kindred product you can possibly require — so you need never accept a substitute

Send for free booklet: "Choosing Your Varnish Maker" — of interest to all users, large or small.

Berry Brothers, Limited

Established 1858

Factories — Detroit, Michigan and Walkerville, Ontario.

holders of the junior issues will be compelled to raise the money to pay the face value of these first-mortgage bonds in full, plus interest compounded at 6 per cent, though the bonds in question call for interest only at the rate of 5 per cent. Therefore, if one has a well-secured first-mortgage bond, he is ultimately sure of his interest, though he may be obliged to wait two or three years.

2. I stated above that one of the objections to these receipts is that the holders thereof are liable to assessment — and assessments are very unpopular. This fact, however, that assessments are so unpopular, makes it necessary to give an exceedingly liberal inducement to holders in order that the assessment may be paid. The result of this is that the investors who have the courage to pay the assessment are handsomely rewarded therefor. The shrewdest investors are continually seeking opportunities for the payment of assessments, knowing that in no other way is it possible to obtain so much for one's money. Moreover, in the case of underlying bonds and other well-secured bonds, it is usually unnecessary even to pay this assessment. If the committee representing the underlying bonds insists on its rights it usually forces the holders of the junior bonds to pay an assessment; while if the holders of the junior bonds have sufficient "sand," and are not also stockholders, they can usually force the stockholders to pay this assessment.

Therefore, in the minds of the ablest investors, the assessment feature is no disadvantage whatsoever.

Bad Trades Made by Investors

3. I stated above that these receipts are unpopular because they do not bear interest, because they must be returned to the trust company to be transferred, and because for other reasons they are so unlike regular bonds upon which interest is being regularly paid. In this connection, however, I should like to ask one question — namely: Even at its worst, why is the receipt for a defaulted bond any worse than a certificate for a non-dividend-paying stock — either preferred or common? I often see unwise investors selling receipts for defaulted bonds because of prejudice and then investing the same money in non-dividend-paying stocks. Personally I cannot imagine a single advantage which a certificate for non-dividend-paying stock has over a receipt for a defaulted bond; though I know many advantages that the receipt for a defaulted bond has over the certificate for a stock which is not yet paying a dividend.

When an investor is assured of the facts he has an opportunity sometimes of using his money in the performance of a real service. This service consists of purchasing these defaulted bonds when the holders thereof are discouraged, panic-stricken and fearful of assessments, disaster or total loss. This is a time when the able, independent investor can perform a real service by stepping into the breach and checking the "panic" in said securities, and for this real service he will, when the reorganization is completed, be paid a handsome profit in addition to a fair rate of interest on the money he has invested.

. . . . . .

I have had some requests from readers of this weekly for an article on short-time notes, having been asked to explain the difference between short-time notes and bonds.

In reply, let me say that there is no real difference and therefore no explanation is necessary. Any bond issue for a period less than five years is usually called a short-time note. Therefore the only difference is in the length of time the obligation has to run.

I suppose the same line of reasoning could be carried still farther, with a statement that there is no real difference between a debenture bond, an unsecured short-time note and a piece of commercial paper; but I do not make this statement at the present time, as there should be a slight technical difference in this case. Nevertheless, it can be generally accepted that an obligation issued for less than a year, and especially for only six months, is generally known as commercial paper, while an obligation for a period of from one year to five years is usually known as a short-time note; and an obligation issued for more than five years is usually known as a bond.

The Delight of Instinctive Playing

YOU have watched a fine pianist playing. You have seen his involuntary swaying with the rhythm of the music — his every attitude expressive of the passage which he is playing. He is the incarnation of *untrammeled instinct.*

And it is not alone the pianist within whom instinct stirs. Listening, you feel it. Everybody feels it.

And if you could have a player piano which made use of your instinctive musical feeling, instead of *resisting* it, you would be astounded at the music you would play.

As you sit at the Virtuolo with your fingers resting lightly on the four sensitive modulating buttons, a new and unknown pleasure comes, wafting you from the world of mundane things into the empyrean blue of Music.

Guided, not by dotted lines and mechanical devices, but by your own infallible *instinct*, you follow with a splendid confidence the weaving and interweaving of progressive harmonies. For the

VIRTUOLO

THE NEW INSTINCTIVE PLAYER PIANO

was built around the one idea of *Instinctive Self-Expression* — of forming a quick, sure circuit between the player's feelings and the sympathetic strings of the piano.

You will realize that the Acsolo buttons really do form this circuit when you play on the Virtuolo, either at your dealer's store or in your own home.

PRICES AND TERMS

The Virtuolo is Hallet & Davis Piano — a piano whose beautiful tone has been praised by greatest composers, musicians and artists, including Franz Liszt, Johann Strauss, Mary Garden — in Colonial, Arts-and-Crafts, Library models, etc., as low as $750. In the fine Conway Piano, mahogany or walnut cases, as low as $575. Lexington Player Piano as low as $450.

Terms: Three years in which to pay, if you desire. Pianos and ordinary player pianos taken in exchange at fair valuation.

We will send you full information if you will fill out the coupon at bottom of the advertisement and mail it to us. Mail it today, before you have a chance to forget about it.

A REBUILT LIFE

II

"RIGHT next door to the house where I had gone to board after I had started my little kindling-wood agency was a vacant lot, fenced in, which the old man had the use of in return for paying the taxes. He worked part of it for a garden in the spring and summer; it gave him something to do, and he raised all the vegetables they could use and some bushels of tomatoes extra. Of course he did not have anything in it in the winter, except a little patch of winter greens, half-covered with brush; and he didn't really need the whole lot anyway.

"One day when the weather was bad, sleety and raw, when I didn't have any coal or ash work and couldn't do any window or walk work, I got to thinking of Welcome Hall again. It seemed to me they would have a hard time supplying that town with kindling wood; I knew they didn't try to supply it all—didn't supply one-fifth of it. They never tried to get extra helpers, but appeared to be satisfied to sell whatever happened to be cut up by the men who blew in there.

"I thought if I only had some lumber and some place for them to work my men might split kindling in bad weather. The more I thought about it the more I saw in it.

"Not long afterward I saw some contractors wrecking two old frame houses—tenements—a few blocks off and almost giving away the old lumber.

"I had some money saved up by this time. Maybe you wouldn't believe it, for maybe you don't realize how I worked and scraped and saved, but I had about three hundred and eighty-five dollars ahead in the bank by that time.

"I made arrangements with the old man with whom I boarded to use the back part of that lot, and bought some of that lumber—had it hauled and dumped over there. Some of it was broken and in pretty bad condition, but the split and broken part was just as good for what I wanted it.

"Then, with a carpenter two days to help us, my men and I put up on the back part of that lot a building that looked like a cross between a stable and a coal-house; but it kept off the water and a good deal of the wind, and made as fine a kindling-splitting place as we needed.

"I even rigged up a sort of fireplace for an open wood fire to burn the scraps of wood, chips, knots and chunks we couldn't use for the kindling—three rows of brick round five feet square of earth in the center of the room, with a big hood made of old tin roofing and tin pipe leading up through the roof of boards to take off the smoke. It was something like a blacksmith's forge or an Indian tent fire, but it was fine for thawing out the hands and taking the hardest cold off the place even in the worst weather."

A Profit in Kindling Wood

"I got about two dozen old barrels for kindling, and in bad weather we all worked, filled those barrels with carefully sawed and split kindling, and stacked the reserve supply. Then I would take orders for it at the places I worked and get a wagon for half a day and deliver it.

"I found in this way my men were better satisfied by having steady work no matter what the weather was, and I made some extra money too. I called this part of the work the Kindling Supply Company—had two cloth signs painted and hooked them on the sides of the wagon whenever I had a kindling-delivery day. They were pretty classy signs for cheap work; and those signs and the wagonful of neat kindling barrels—I gave all the barrels a coat of green paint, with the hoops painted red—usually sold off six or eight extra barrels before we got round with one delivery load. I got quite a trade for the Kindling Supply Company—which was myself, as I said—before the winter was entirely over. When spring opened I had more work than ever; for I decided to do all the whitewashing I could get and handle—and there were two months of that.

"I took on two extra hands—two German boys, about seventeen years old, who had been working in a box factory for small wages. I started them at five dollars a week—the same as they had been getting in the box factory—and told them I would give them, extra, ten per cent of all over five dollars that the work they did amounted to each week.

"It took them a few days to fully understand this, but when they did they worked the best you ever saw. Besides that, I gave the one of them that seemed to have done the best a little money prize each week. Both the quantity and the quality of the work they did counted, and I often left it to the boys themselves to decide which deserved it.

"In the whitewashing business I investigated and experimented until I got about the best receipt ever used for whitewash, I think, and about the best results.

"Then I made a specialty of whitening stone steps and pavements, and stone walls and yard curbing. I invented a mixture of stone dust, water, glue, salt, whiting, lime and one or two other things, which certainly did make things look nice. I used a coarse paintbrush to put it on—could do it quickly and most satisfactorily that way—and it looked whiter and lasted three times longer than ordinary stone-dust wash.

"By keeping an old piece of carpet where I was working and taking some pains, I found I could leave the stone walks as sanded could want it, without spattering up the walks or ground alongside. You don't know how many housekeepers think of that! That neat kind of work and its lasting quality gave me a sort of reputation before the summer had fairly begun, and I charged pretty well for that work. The housekeepers were glad to pay a little extra for work that looked so much finer and lasted so much longer than the old kind. I kept my two German boys at it about half the time that second summer, and they took as much pride and interest in it as they were housepainters."

Saving for the Children

"I worked those two schoolboys again all that summer; and the three pairs of helpers—getting work for them and seeing they did it right—kept me and my boys so busy I didn't have time to do much work myself. However, they all knew I was above doing it, and they saw every day and then—when somebody got sick or extra work piled in that just had to be put through—that I rolled up my sleeves and scrubbed pavements, cut grass and washed windows as quick as I ever did."

"Did you ever hear from your wife during this time?" I asked.

"My wife?" he repeated. "No, I never heard from her; but I heard of her. She got along better and better I got more restless about her and the girls, and I put a lawyer to write and find out from another lawyer where they lived and how they were getting along. I heard they were doing pretty well, considering how little they had to live on; that my wife was working but still kept the two girls in school."

"Didn't you—" I began involuntarily, then realized I was to be a listener and not a questioner, and stopped abruptly.

"Didn't I what?" he asked sharply, pausing for a moment. Then: "Oh, I know what you were going to say," he resumed. "Yes, I did; I sent her two hundred dollars through the lawyers in August; and I tell you I never enjoyed paying out any money more! It was the first time for twelve years I had done anything toward helping support my family, and no one knows how much it made me feel like a self-respecting man again!

"No—I see what you want to ask—she didn't write and thank me. That was Jessie all through; she wasn't going to be bought for two hundred dollars.

"'Tell him I will take it and use it for his children,' was the message she sent back through the lawyers. She wasn't going to let me forget that we were no longer husband and wife; that we were strangers in law; that my crime and the law had freed her independently free from me; and she was not going to let me put her under any obligations to me again. That was her all right; but she hadn't married again—she wasn't that kind.

"I had a telephone put in that summer and paid the old man I lived with a little to take orders over the 'phone. It meant something to him besides the money—the feeling that he had some occupation, was of some importance again; and it meant a lot to me.

"That telephone paid for itself three or four times over the first month. It was

Digitized by Google

gotten and time and energy saved. You have to watch those things, I tell you, and save all the time and strength you can. I wasn't much of a business man—you might think my business wasn't any business at all; but I did a lot of thinking about it, day and evenings too. I hadn't much else satisfactory to think about.

"You may wonder why I didn't go into some other business, into some regular business, after I got a start and some money saved. Yes, I could have done so; but why should I?

"I was making money in this, it was honest and all right, even if it was scrubbing windows and walks and all that. And you may think it's funny, but I got to thinking of it as a good business—one that made the town cleaner and homes tidier and persons more self-respecting and happier.

"Oh, I suppose it's all foolishness and you may laugh at me, but that's the way I got to feel about my business; and I got proud of it and glad I could make money and at the same time do something that was really helping the people and the town."

I did not laugh, but said heartily:

"If we all had that feeling and acted on it, the town sections of the world would be different places—better to live in."

The Intermittent Help Agency

"Wouldn't they though?" he exclaimed with enthusiasm. "That's the way I feel about it. Well, sir, I was getting along all right that fall until I lost both my colored helpers—one died, and the rheumatic one got so he couldn't work much and went to the country to live with his son.

"The schoolboys had gone back to school, and that left me with only my two box-factory hands and more work than ever. I had to do something—and that quick too—to hold my trade.

"I had been looking out for fellows to work, for good helpers, all along; but they were hard to get. Some felt they were above the work, and others wanted better jobs, where they would have a future—I couldn't blame them for that.

"But I knew there must be some good reliable young fellows who could do the kind of work I wanted and that I could train to be worth good wages to me—boys who had no education or trade and who would make just laborers' wages somewhere. Only those best boys seemed to think my work wasn't good enough for them—was too low down—too—too—what's the word?"

"Menial?" I suggested.

"Menial; yes, that's it—too menial for them. So I studied hard how to make my work less menial and more stylish. Think of making the scrubbing of walks and windows stylish!

"But I did—and how do you think I managed it? Why, by putting uniforms on them and sending them out as representatives of a first-class company—the Intermittent Help Agency. There's my card—what do you think of it?"

He handed me a large business card of good quality, on which was neatly printed:

HOUSEKEEPING MADE EASY — THE SERVANT PROBLEM SOLVED
TELEPHONE, MAIN 870 K

INTERMITTENT HELP AGENCY

WINDOWS WASHED
STEPS AND WALKS SCRUBBED
GRASS CUT
STONE STEPS WHITENED
COAL PUT IN
FURNACES CLEANED
WHITEWASHING DONE, ETC.

COOKS, HOUSEMAIDS, NURSES,
HOUSEMEN AND LABORERS
OF ALL KINDS
FURNISHED BY THE DAY

I looked at it with interest.

"Do you do all that?" I asked.

"I do now," he replied; "I didn't at first. I first called it an agency two years ago, when I had to do something to make scrub and ash work stylish.

"I had those two fine German boys, who were making good wages for themselves and for me, too, and I managed to get a few more like them. I saw I couldn't have white and colored both in my agency, so I took only the white.

"I dressed them in khaki uniforms, with slouch soldier hats; and they had some class to them. In winter I had dark blue uniforms for them, with trousers piped in red, and stiff blue caps. Those uniforms advertised my work a lot and made my helpers feel they were responsible, trusted employees of a responsible agency. They held up their heads about their work; seemed to see all sorts of difference between their scrubbing pavements—in their khaki suits, gum boots and soldier hats—and the old darky scrubbing pavements half a block farther down the street.

"I have several strong intelligent high-school boys, too, between sixteen and eighteen years old, on Friday afternoons and Saturdays. By careful choosing I have been able to select a reliable set who have done good work after I have trained them.

"By picking the most sensible of them, dressing them as soldiers and putting them to work away from their home neighborhoods, I have gotten splendid results—have overcome any fool notions about the work being beneath them. They soon get proud of the work and the organization, with good wages, the per-cent system over wages and the special prizes each week for good, quick work.

"The cooks and maids and nurses? They came later; I've only been furnishing them this past year. You know how helpless some people are and how put out most of them get when the servants get sick and don't come—and cooks will miss a day sometimes, the best of them.

"Well, sir, I got to thinking about it a good deal; you see my work has always taken me round by the kitchen and I could see how each family was getting along. I saw so much inconvenience from servants dropping out that it occurred to me that a lot of people would be willing to pay a little extra if they could telephone and get a supply cook, a first-class one, for a day or two. The same way with maids and nurses and housemen. The more I thought of it the more reasonable it seemed.

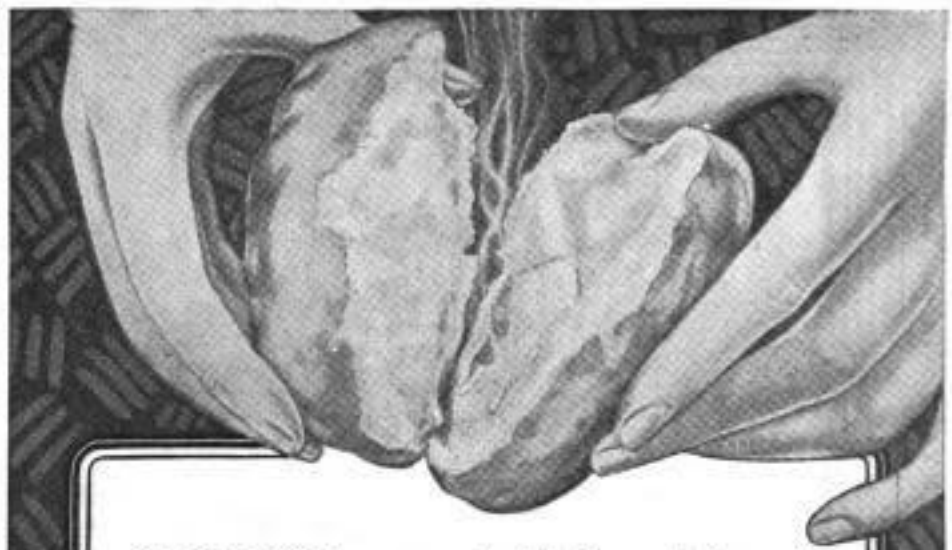
"So I looked round to see if there weren't a few good negro cooks willing to go out by the day, two or three days a week—like many washerwomen—who still wanted to keep house for their families and wouldn't live out all the time.

"I found a good many first-class ones, picking them up slowly—cooks and maids and nurses and cleaners—that I could rely upon for occasional work. I did not stop looking until I found enough, so that if one did not want to go out that day I could be sure of another in her place. They, too, felt it meant something a little more than ordinary to belong to the Intermittent Help Agency; they would work for me when they wouldn't work for some other people, and they would get their first-class friends to work for the agency too.

"I found this the easiest and best way to get new helpers, white and colored; to get the good ones I have to recommend other good ones. They know; and in this way I've built up a list of good ones."

Cooks and Maids in Uniform

"I see that they get good wages; and I charge about twenty per cent of their wages extra a day for supplying the help—all paid by the employer. The employer telephones me; I supply the needed servant—capable, neatly dressed in uniform, reliable—delivered at the house within an hour usually.



"I have the women dress in uniform too—a neat gray stripe trimmed in solid dark blue for the white cooks and maids; and a brown stripe trimmed in red for the colored. They like it and it takes well with the employers. It's a little unusual, but so are the servants. I keep only the best on my list, and they have gotten to know it—servants and employers both.

"A year ago I bought a small second-hand automobile for three hundred and fifteen dollars, and learned to run it myself. I use it instead of a bicycle; it is a great help, makes an easy way of carrying brooms and pails and mops and helpers from one place to another, and impresses everybody. A cook or nurse or scrubwoman, in her neat uniform, riding to her work in an automobile, with the backing of the Intermittent Help Agency, feels that she has an important position and that her work must come up to it. The same way with my soldier helpers.

"During these last two years I have also trained two or three understudies to help me train new workers, to run the business, and to carry on things if I am sick or away for a day or two; I am not so strong as I used to be fifteen years ago, and this is necessary if a man wants his business to grow—he mustn't make it a one-man thing.

"The last year I have run an employment agency, too, though it cut into my

Suit 36

By Poiret of Paris

Poiret is said by many to be the greatest living artist in dress. His evening gowns and carriage wraps are magnificent. His tailored styles are the acme of simplicity. This is an exact copy of the model which Poiret himself sent to the Wooltex factory—exact in style, in lines, in material and in trimming. The original cost $150 in Paris. You can buy this Wooltex reproduction at $38.50—a saving of more than $100.

Wooltex Styles

Wooltex styles are always fresh, always charming; each one passed upon by Mme. Savarie, head of the Wooltex Fashion Bureau, an institution that spends $50,000 a year for style alone. An institution whose members gather the best styles of France and adapt them to the needs of well-dressed American women.

All this that the Wooltex label may always guarantee authoritative style even as it does superior quality.

Where To Get Them

Nearly a thousand merchants sell Wooltex.

Most of them say, "Mine is 'The Store That Sells Wooltex.'"

Theirs may not always be the biggest stores or the best locations—

But they *are* pretty sure to be thoroughly reliable and to give you good value for every dollar you spend.

That is why we ask you to shop at the Wooltex Store.

Coat 227

An original Wooltex coat

The lines of this original Wooltex model are so handsome it might well be one of the highest priced garments. But its price is very moderate. Equally good for travelers or for stay-at-homes. A splendid style for tall women. Made in a number of attractive cloths, among them some of the new reversibles. Price $20 and $25 according to material.

Many a man who would laugh at the idea of putting tin shoes on his horse because they would cost less than iron shoes, thinks nothing of putting poor paint on his buildings. He fools himself into the notion that he's saving money thereby. He isn't. He's losing it. This matter of deciding upon what brand of paint you'll use is too important to be dealt with lightly. You can "bank" on Acme Quality Paints every time. They mean longer life to your property because of their durability. Their use means economy, because of their surface-covering capacity. They are easy to apply, because they flow readily and spread evenly. Dry quickly—look the best.

ACME QUALITY

Paints, Enamels, Stains and Varnishes

Fill every sort of painting requirement. Keep the name firmly in mind—Acme Quality. Determine to *have* it. The Acme Quality trademark is your safeguard. Trust it every time.

Acme Quality Porch Furniture Enamel
Gives a brilliant enamel finish that withstands the ravages of the weather. Works equally well on wood or metal.

Acme Quality Art Wood Finish
Imparts a handsome, durable surface—Mission, Weathered, Flemish and other artistic stain effects.

Acme Quality Floor Paint
Gives a hard, durable, lustrous surface that is easy to clean. Spreads evenly, dries quickly.

Get Our Free Painting Guide Book

It is full of practical information about painting. Finely illustrated in colors. A copy should be in every home. Send now. Your dealer probably sells Acme Quality Paints. Tell him what kind of surfaces you wish to cover. If he cannot supply you, let us know and we will see that your needs are filled.

plans some. I had to do this in self-defense. There were so many persons out of servants who had one of my helpers—neat, capable, trustworthy—supplied to them for a few days, that naturally enough tried hard to employ them permanently.

"Many of these people offered such good wages that they persuaded my helpers to take permanent positions, though I have some on my books who, on account of health or children or almost sufficient support from their husbands' earnings, cannot be persuaded to go out regularly all the time into service. Still, they are glad to take in a few washings or go out for a couple of days each week.

"The employment part of my business supplies only the best help after it has been tested and approved by the Intermittent Help Agency, and after the employer has had a chance to see how she likes the servant. In this way employers and employees know conditions and each other, there are fewer misfits on either side and homes gotten in this way are generally more permanent. I charge ten dollars for filling each position, the employer paying the entire fee when the servant is engaged.

"Yes, I have made some money, but I haven't saved so much, for I sent my wife, through that lawyer, six hundred dollars within the last year and four hundred dollars the year before that—for the girls. No, she has never written to me or said 'Thank you!' I guess she thinks it's no more than I should do for my children—the lawyer reported that's about what she said. She's right—it's not any more than I should do; but she did say last week, after I sent the last two hundred dollars, that I could come on to see the girls if I wanted to. 'Tell him he can come on to see his children,' the lawyer told me were the words she said.

"I haven't seen them for fourteen years; that's a long time—between three years old and seventeen and one year old and fifteen. I haven't had even a picture of them. Do you suppose they look now anything like they did when they were babies? Of course you can't tell that."

A Cloud With a Silver Lining

"She is willing to let me see the children—I am on my way there now. They live in Johnsonburg—we'll reach the Junction in less than an hour. Am I doing right to break in on their life again? They would not know me if they saw me pass. Have I, an ex-convict, any right to come back into their lives now?"

"You are still their father and you've rebuilt your life—they can't get away from those facts. Would they be doing right not to see you?"

"That's not it; my part, what's that?"

"Your wife said see them. You can trust her judgment, can't you?"

"Yes, I can. Of course I would like in a way to see them; but I'd give anything—anything in the world—to see my wife again! I suppose I oughtn't to call her that now though—we've been legal strangers, as my lawyer calls it, so long; but I'd give anything to see her again!" he ended wistfully.

"Do you still love her?" I asked.

"Love her?" he said with a curious, earnest ring in his voice.

We had risen to go back to the sleeper and he did not say anything further until we were seated in the car. Then:

"Love her!" he repeated, as if there had been no interruption. "I've worked and scrimped and saved, and tried to make a man of myself—and, by jiminy, I have done it, too, though it hurt like the devil—for her, for her! I don't think of any other woman, day or night, and haven't these fourteen years; and I'm always thinking of her and wanting to do for her. I'd do anything for her, anything on earth, even—listen!—even to never seeing her again if I was sure that was best for her. Do you hear me? I mean that; but—oh, you're just a bachelor and don't understand. You don't know what that means—unless, perhaps—do you love some woman that way now?"

"Was that the question you wished to ask me?" I replied, smiling.

"The question? Oh, no; I wanted your advice. I have been alone so much these fourteen years—I mean really alone, you know. When you see people you can't talk to, or can say only the things that have to be said, you are pretty much alone; but I've done a lot of thinking.

"I'm on my way to see the girls now, as I said. That's the reason I'm dressed up so; I never had a suit before in all these years that cost over twenty dollars. I've been riding all this way in the sleeper to get used to things, to feel like folks, to get up my courage a little more. It's worth a lot to a fellow to taste a little high living sometimes; only I don't seem to fit in—I can't get accustomed to it; I feel so shut out and so shut up still. That's the reason I felt I must say something to somebody; that's the reason I'm talking to you. I saw you just reading and writing down things every once in a while; and I saw you noticed me—and didn't seem to look down on me.

"Now it's this. I probably won't see her, but I can look her up; I'd follow her to China if I had my way. You know exactly how things are and how I feel about her. This is the question: Ought I—have I any right to go after her, follow her, find her, tell her how I love her and ask her to marry me again? What do you think? Tell me fairly, no matter how it hurts—I'm used to hurts."

I was silent a moment.

"You have no right to keep it from her," I finally replied with conviction. "You have rebuilt your life. Let her have another chance at hers; let her decide."

His face lightened.

Paid in Full

We rode on for some time in silence. At length I said:

"I hope you will find everything even better than you hope. I appreciate your telling me all this; it's fine to know a man has done what you have these last four years."

He looked gratified.

"It hasn't been easy," was all he answered.

We rode a mile or two more without speaking; then he said, as if he had just reached a determination:

"Say, you don't know me, or even where I live?"

"No," I answered. He had not given me that information.

"Well, you can write down what I've told you. I saw you writing things yesterday on pieces of paper when you were not reading—looked like you were making notes. You write, don't you?"

"Oh, I am no author," I protested.

"Aren't you a writer?"

"A little writing doesn't make a writer—that is merely a by-product," I responded.

"You have heard my experience. Write it down, write it down!" he insisted earnestly. "May be some poor devil who thinks he has no chance may see it some time and make a chance for himself."

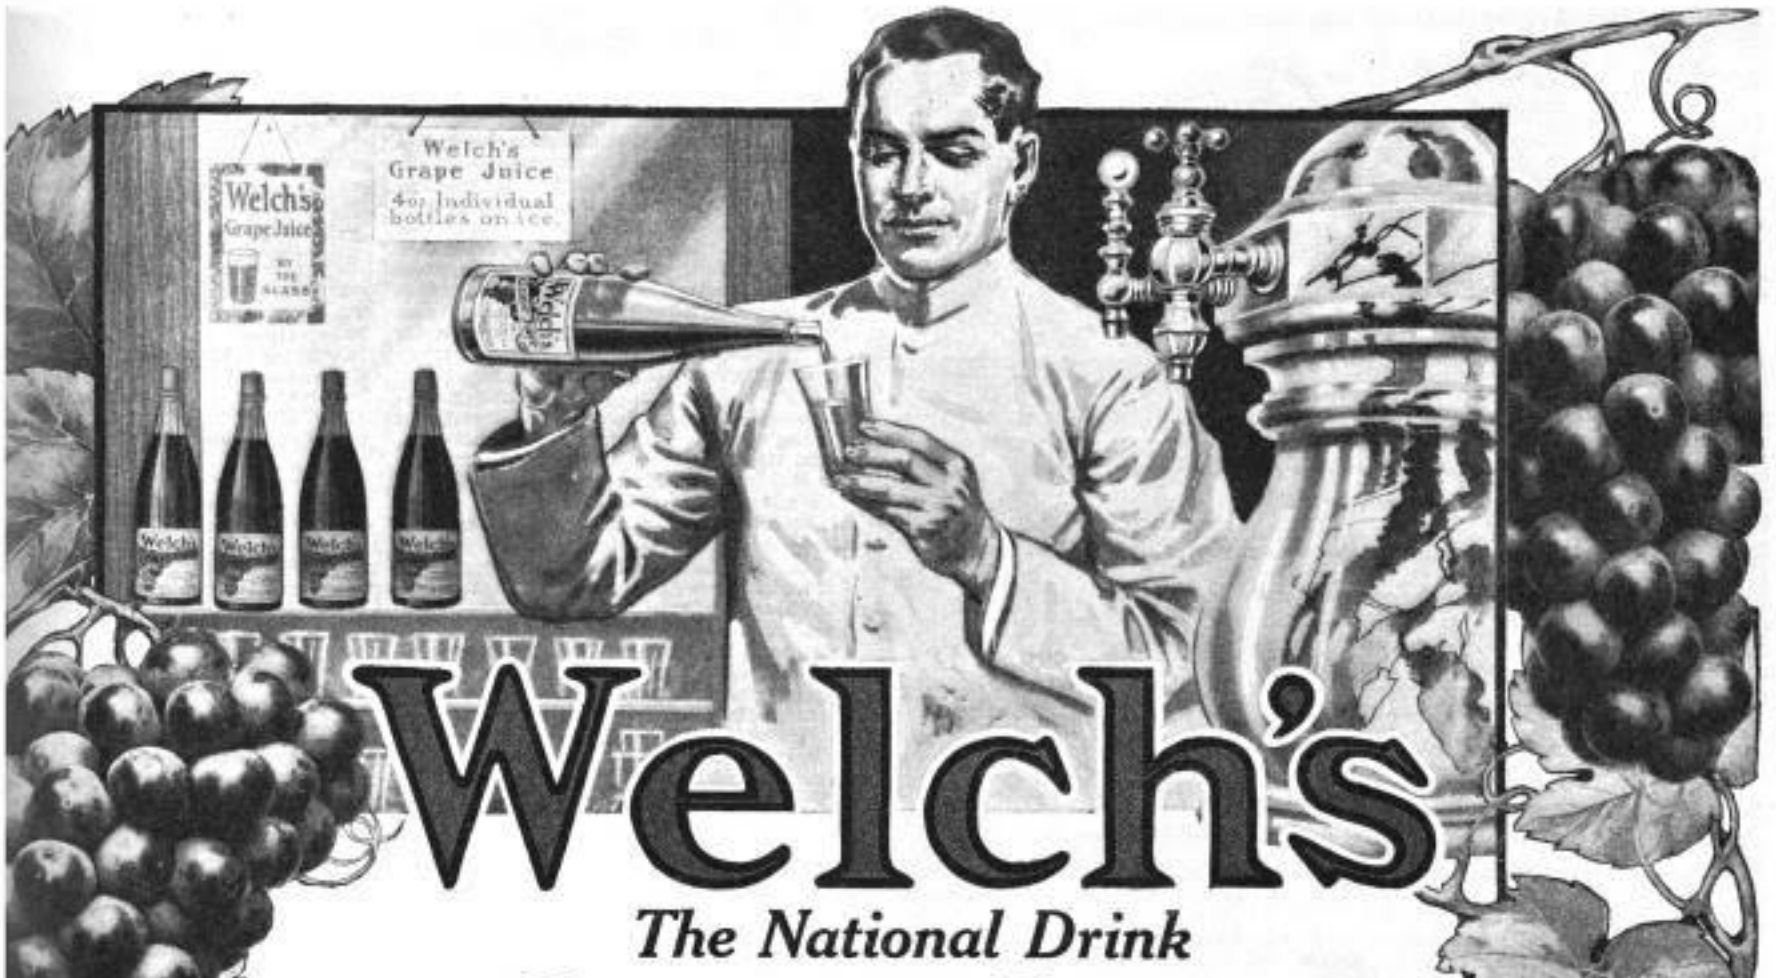
I did not answer for we heard the porter calling:

"Johnsonburg Junction! Johnsonburg Junction the next stop. Change cars for ——"

He got his things together—I was going on farther—and we sat together silently looking out at the scattering houses on the outskirts of the poor little junction point.

"They say Johnsonburg is only twenty-eight miles from the Junction," he remarked after a time. "I wonder what the girls will look like."

As the final "Johnsonburg Junction!" came in rolling tones and the train drew into the station, he rose and took up his suitcase, saying:



"Here's where I leave you. It doesn't look like much of a place"—we were both looking at the dozen persons loosely grouped on the platform waiting for the train to come to a full stop—"but—Why, there's Jessie!" he exclaimed suddenly, with a new, exultant ring in his voice, and without another word he rushed toward the door of the car.

I looked out and saw among those on the platform a thin, little dark-eyed woman, with irongray hair and a face that singularly impressed me. It seemed a face habitually tired, lined and sunken about the eyes, but now lit up with eager light and hope and loving expectancy.

When my fellow traveler jumped off the car and hastily made his way toward her, she stepped forward with a look meant only for him—a look to cancel much sorrow in the life of any man. Then he dropped his bag and took her in his arms, while—the crowd forgotten—her hands clasped about his neck.

As the train pulled out they moved off together. He did not even look back—he had quite forgotten me. I wondered who he was and how the girls would greet him.

Welch's

The National Drink

Grape Juice

The store that serves you Welch's at the fountain may be depended upon

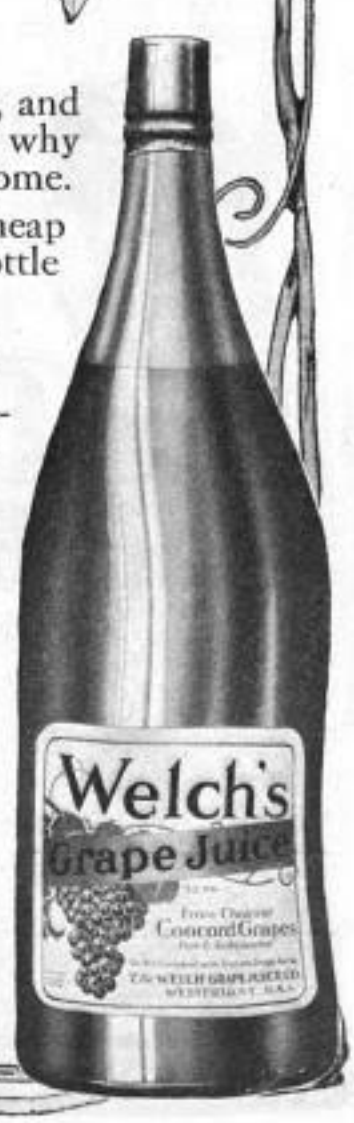
Perhaps you have gone to a fountain, thinking of WELCH'S, and asked for a glass of "grape juice." And you have wondered why it did not *taste* like the WELCH'S you have had in your home.

The lure of greater profit induces some dealers to dispense cheap grape juice at the soda fountain, although their trade by the bottle is all WELCH'S.

Do more than ask for "Grape Juice"—ask for Welch's—and get it!

WELCH'S is good for you. It is not a manufactured drink—it is a natural beverage, nothing but the pure juice of choicest selected Concords, without addition and unchanged in any way. Its fruity aroma, delicious tartness and thirst-quenching qualities are tonic and stimulating. It is the drink without a drug or a *drag*.

Get the Welch Habit—It's one that won't get you



We make but one thing—Welch's Grape Juice. We have but one brand. We know the value of specializing.

The name Welch on grape juice means "best." Grape Juice bearing any but the regular WELCH label is not made by us, therefore order by name for your protection.

Many fountains serve WELCH'S in the individual four-ounce bottle at ten cents. Ask for this today.

Keep a case of WELCH'S at home for your family and friends. You may be surprised at how quickly you will use it up, but you will be pleased with its readiness for any occasion. It helps to make many dainty desserts, and may be quickly made into delicious punches and other beverages.

Always serve it *cold*. Booklet of recipes for social use sent on request.

If unable to get WELCH'S of your dealer, we will send a trial dozen pints for $3, express prepaid east of Omaha. Four-ounce bottle by mail, 10c.

The Welch Grape Juice Company, Westfield, N. Y.

National Lead Co. has six of our trucks in service.

First order, April 6, 1909; last order, October 18, 1911.

Repeat orders signify approval.

Proved by 12 years of real service

Mack *and* Saurer

Proved by 17 years of real service

"Leading gasoline trucks of the world"

The important questions about motor-trucks are:

1. Will they last long enough to repay the original investment with profit?
2. Is there a sufficient variety of sizes and styles of body for each individual use?

On these points we give you a complete answer:

1. Saurer trucks have made good consistently for 17 years; Mack for 12 years.
2. Capacities of 1, 1½, 2, 3, 4, 4½, 5, 6½, 7½ and 10 tons. Bodies suitable for each owner are built in our own plant.

We have data on the transportation problems of practically every line of business. We shall be glad to send you that referring to your particular line, on request.

Our Engineering Department is at your service for determining the value, or variety, of motor-truck equipment for your special needs.

How's Business and Wh

MEN honestly differ in their understanding of the general business situation and the opinions one meets are quite at variance—diametrically opposite in instances. The curious feature is that they are able to fortify their contentions with more or less conclusive proof. As to the facts, it will probably not be doubted that in modern times merchants have rarely carried smaller stocks of goods and wares on their shelves. They buy as they must and are not taking large amounts in order to save on the price; in other words, they are not speculating in the commodities they are dealing in. Perhaps this constitutes the main difference between boom times and ordinary times. Furthermore, this attitude on the part of jobbers and retailers suggests absence of expectation of an advance in prices of certain products. The recent active movement in metallic copper may be worth citing in this connection. The price had been dragging along round thirteen cents a pound, without varying much, and men were wondering whether that was to be a stable price indefinitely. Consumption or buying that passed for consumption had gradually reduced the so-called visible supply until it did not look so formidable as it once did.

There is little question that the long duration of comparatively cheap copper had stimulated consumption considerably. Nobody was better informed on that subject than foreign dealers, who are now credited with instituting buying to such an extent that other interests were impressed and did likewise, the effect on consumers being that they were frightened into taking on a larger supply than they had carried in a long while. One selling agency is reported to have sold eighty million pounds that it did not care to hold longer. There were bookings for January, February and March deliveries, most of them being set down in December; and consumers and others appear to have loaded up in a sort of wholesale fashion. A less amount of copper seems to have been wanted since then, and people who bought to sell again and neglected to sell have had to concede somewhat from the fourteen-and-a-half-cent price. Lately copper was offered under fourteen cents by a prominent producer and seller. There was a suspicion that this offer was not wholly disconnected from the idea of annoying another producer and dealer who got the better of the selling on the advance. Be that as it may, the copper industry received quite an impetus through the shifting of stocks from first to second and third hands, and broke up, for the time at least, the habit of buying from hand to mouth.

The Effect of Copper on Production

If all lines of industry had succeeded, as this industry did, in inducing wholesale and speculative purchases, and if the shares of other industrial concerns had been made as active as were the copper shares, the effect on sentiment in general and speculative sentiment in particular most likely would have been pronounced. It is not shown that copper melting has received any particular impetus from the higher prices of the raw material. There is a feeling that, unless spring shall quicken the demand for manufactured copper, the enlarged buying of refined will not continue, but that the higher price will lead the augmented production after, say, two or three months; for there are mining companies which would starve on twelve or thirteen cent copper that would make a little money with copper at fourteen cents.

Whether the larger producers will see that higher copper does not stimulate production to the point of danger to themselves is an interesting question. The larger producers curtailed production somewhat for a year and longer, and might be tempted to enlarge production if sufficient profits are indicated. The feeling at present is that the outlook is uncertain and that it will be worth while to watch affairs at the opening of spring.

Early February advices were that the Western railroads were having the heaviest traffic in months, the result in part of the interruption caused by bad weather, and likewise the result of pressure to get certain products to market—notably corn—before the breaking up of winter should bring impassable roads, with an excess of grain on hand. Country elevators and t primary points were reported so grain that they had to be closed t amounts that would ordinarily be ported. A shortage of coal cars, a box cars for the transportation o was said to exist. A special indu sell corn has been the prevalence cholera in some districts in Iowa where, which reduced the stock o be fattened; and again, the pr price of corn—as much as sixty Illinois—led many farmers to pu their supply. Corn arrivals at for five weeks from January 31,677,000 bushels, an increase of bushels compared with the same previous year, when traffic conditions considered perfect and the crop largest ever raised. The price to nineteen cents higher than however, with the weather favorable handling. Receipts for the last week period were the largest in years, amounting to 9,918,000 The movement of flour for the named was the best in months, and been none too good for a considerable

United States Steel Earnings

Traffic receipts of some of the railroads as lately reported, have not compared favorably with the previous year as be desired by the managers and stockholders, though in other cases they have been quite favorable. The New York Central road, for example, shows, for months ending December thirty-first, gross increase of but $1,589,977 and 217 decrease in operating expenses, of no less than $660,352 was saved in maintenance of equipment, suggesting a questionable policy. Lake Shore, the best of Vanderbilt mileage, found its gross revenue for the same period decreased $8,125; cut operating and maintenance costs $3,642,788 in order to secure $3,560,000 improvement in net revenue. The Louisville & Nashville road showed a gain in revenue of $378,289 and reduced outlay for operating and upkeep by $157,461; that the gain in net for the six months was $512,779, outside of taxes. Other and favorable examples of operations, as Illinois Central, could be cited, to the tending to show that railroad managers have been practicing economies at points where they were perhaps liberal in expenditures previously, but where they will be obliged to spend with a free hand hereafter. It may be that the orders for equipment, rails and other supplies at the close of 1911 and the beginning of the current year are suggestive of a purpose in that direction. These orders, by-and-by, may, if maintained—improvement in the iron and steel industry—improvement that has already been heralded far and wide by stock-market devotees.

Unhappily the latest information is of lack of supplemental equipment orders which, however, ought not to excite surprise. Steel men have certainly been more cheerful than for some time. The report of the United States Steel Corporation for the final quarter of 1911 surprised pessimistic prophets by exceeding twenty-three million dollars and showing the quarterly dividend earned, with a modest sum to spare, with very much less than the usual amount charged off for the quarter. It looked as if the statement was manipulated to make the market price of the common stock, which is among the most important gauges in the price structure of the stock market.

As goes steel, so frequently goes the entire market. Steel is supposed to be the pet of certain prominent capitalists, and some people fancy they can discern the market position of these men by the movements of steel common in Wall Street. The men in question have many followers at times. Speaking of the United States Steel Corporation, current financial literature estimates that the corporation produced fifteen million tons of finished steel, from which was secured $104,000,000 net earnings, or $10.40 a ton. This compares with 10,000,000 tons that netted $13.14 a ton; 9,859,660 tons that netted $13.34 a ton in 1909; 6,206,932 tons that netted $14.51 a ton in 1908; 10,564,539 tons that netted $15.51 a ton in 1907, and 10,575,[illegible] that netted $14.81 a ton in 1906. The difficulty seems to be less with the [illegible]

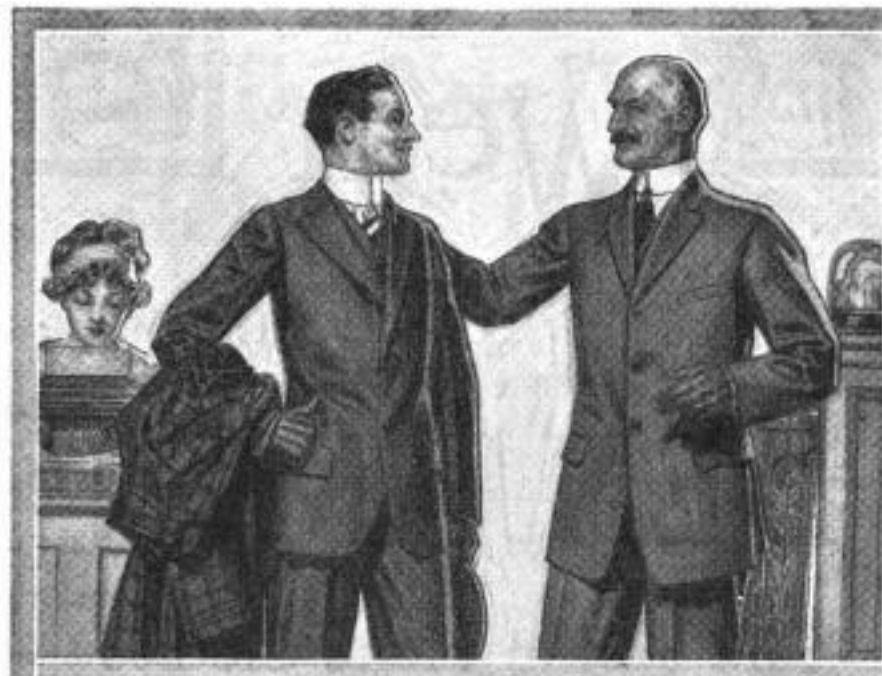
than with profits. In other words, there is business in plenty, but it is done on a relatively small margin for profit. This complaint, it is to be said, is almost universal in the business community. Current report is that orders are not quite maintained in the steel industry but are considerable, and uncertain hope is expressed as regards the outlook.

A person connected with the cotton-mill industry of New England lately observed that his mill never sold so many goods in any January as in the first month of 1912. Other testimony is conflicting.

The high cost of living is challenging deep thought, and the disparity between wages and the prices of commodities is being brought home to intelligent men everywhere. Perhaps the greatest good to spring from strikes of laboring men will be from the illumination of the topic of income and necessary expenditure.

In regard to foreign trade, emphasis is being placed on the fact that for 1911 the exports of manufactures from the United States for the first time exceeded a billion dollars for a given twelvemonth. That this is to be more a manufacturing and less an agricultural country is among the indications regretted by not a few citizens. On the one hand, the development of manufactures brings to the country hundreds of thousands of aliens, who are possessed of habits and temperaments not readily dealt with, and who multiply the difficulties of harmonizing classes of citizens beyond the appreciation of people not familiar with the affair. These difficulties have increased tremendously, and the wisest men are in doubt as to what ought to be done.



Gold Shipped to Europe

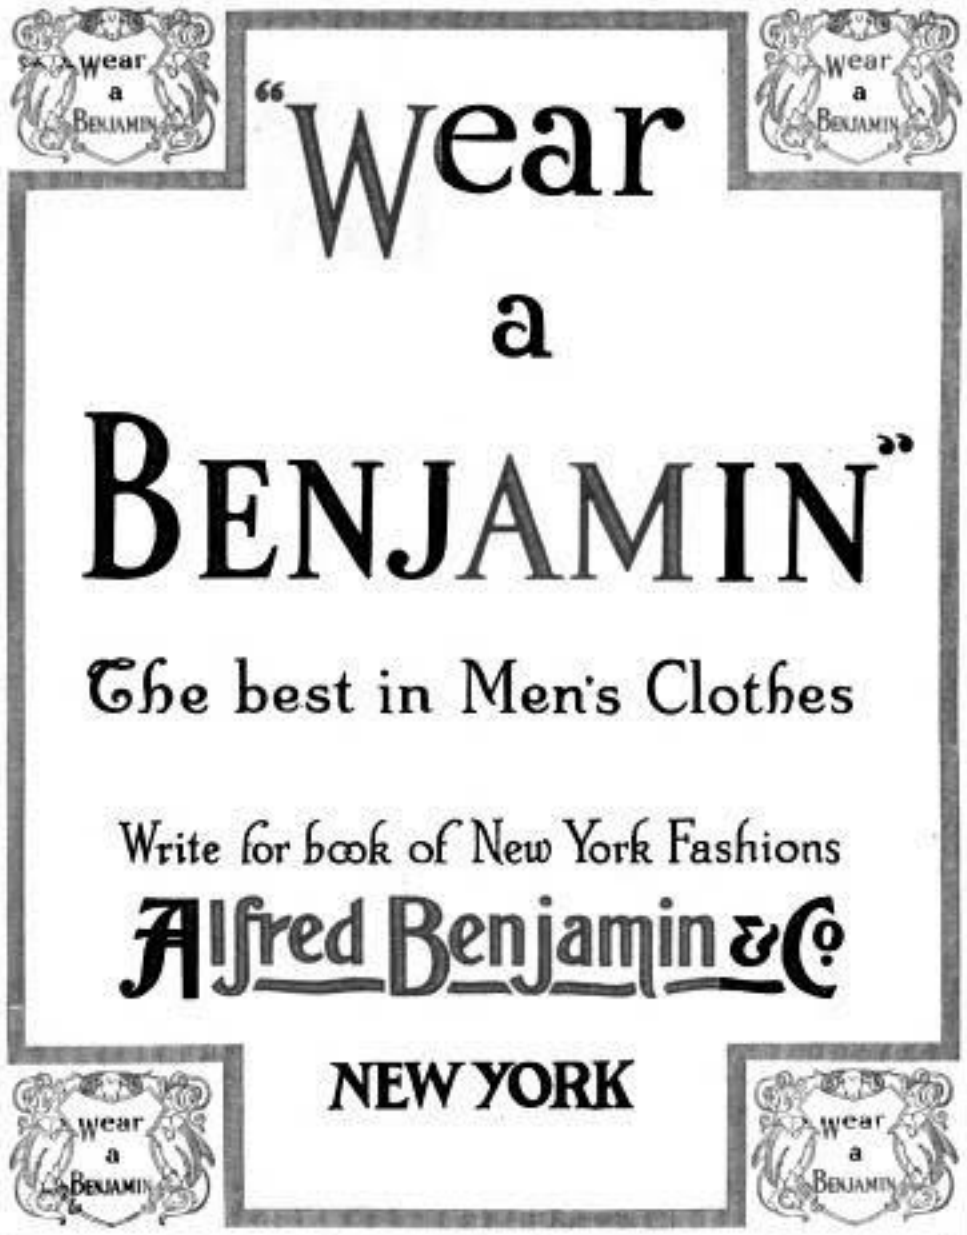
Direct gold exports to Europe set in early in February, and it was calculated they might amount to quite a number of millions before the tide would be reversed. Bankers rather welcome than decry this outward movement. They believe the gold can be spared, as it is not needed either to protect the currency or for the conduct of business. Bankers do not know how to employ in a profitable way the money accumulating in their vaults. They were really glad at the recent reduction of some seven million dollars surplus by the New York banks in a single week. It ought not, perhaps, to be said that there are not openings for the use of money, for these are ever present, albeit the openings may not be such as to appeal to the moneylender.

It seems singular to see a country like this complaining of an excess of cash; but grant that such excess exists—grant, if you please, that the excess may be even larger than at present—it follows that it is a situation that will correct itself by leading eventually to employment, and stimulate a development of confidence to an extent that investments will be freely made and good times be brought round again.

By many, the existing political, social, financial and industrial—including labor—status is painful if not intolerable; and to this condition of mind largely is attributed the hesitation in the commitment of money and effort in a business direction. Yet business is large, indeed, in volume and men are not going to sulk any longer than in their judgment necessity compels. They may well reason that, given a large volume of business, with a chance of the volume being eventually still further enlarged, it can only be a question of time when consumption will gain on production and the opportunity for enlarged profits will surely recur.

There is an unlimited amount of latent energy in the American people and a genius for governing among them that will assure the successful grappling with the perplexing problems now being faced; and when success shall be achieved—not many years hence—one may be certain that out of it will come a happier and more prosperous and progressive people than has heretofore been met in this or perhaps in any land. It will pay, at this juncture, to devote as much time as shall be required to studying the problems confronting the nation and to adjusting conflicting differences upon a just and reasonable basis, for they will never stay adjusted if left upon a different basis. The immediate outlook is, nevertheless, for the observance of conservatism in business circles generally until the political atmosphere shall become clarified by the selection of candidates for the presidency by the leading political parties, and until it shall appear what interests are to select the next occupant of the White House.

TO the young man in business, friends are of greatest value. FITFORM clothes make friends on the road, in the office, everywhere. They give the professional young man a prestige ordinary clothes can never give. Successful young men prefer FITFORM clothes and FITFORM clothes contribute largely to make young men successful. Whatever you do, wear



FITFORM CLOTHES
FOR YOUNG MEN

Our splendid London style is shown on young man in the picture. It's a strictly English style with two button coat, 30 inches long, soft roll lapel. It fits snugly, is narrow-shouldered, makes the figure look long and slim. The older man wears the Universal, a conservative but stylish garment, that is more roomy and loose throughout than the London. Both come in selected fabrics of exclusive pattern and choicest blue serges.

"PENNSYLVANIA" Quality Lawn Mowers

Have Self-Sharpening, Crucible Tool-Steel Blades Throughout

THESE blades, oil-hardened and water-tempered, are made from the same kind of steel as is used in high-class chisels, knives and all tools requiring a keen-cutting edge. The lipped-edge stationary blade is so constructed that it gradually wears away, sharpening both itself and the revolving knives in the process. This self-sharpening feature enables a "PENNSYLVANIA" to soon pay for itself.

"PENNSYLVANIAS" are best for every class of work; will last longer and will do more work with less labor than any other mower on the market.

For positive lawn mower satisfaction, insist upon "PENNSYLVANIA" *Quality*—for 30 years in a class by themselves. Ask your dealer to show you the "PENNSYLVANIA" lines.

MAILED FREE

"The Lawn—Its Making and Care," an instructive book written for us by a prominent authority,—gladly mailed free on request.

Your Gun—How and Why it Should Fit You

IN THE colonial days of this country wing shooting was held to be preëminently a gentleman's accomplishment. The hardy rifleman of the backwoods scorned it; but always in this country and in others it has been considered in good classes a desirable accomplishment to be able to shoot fairly well on the wing. There are more Americans who can do this today than there are Englishmen, Frenchmen, Germans or men of any other nation.

With professional shooting at the traps we need concern ourselves very little, for that is rather a business than an accomplishment. Neither need we wholly admire the deadly skill of the professional market shooter, for that also is a business and not an accomplishment. All this aside, a great many of us shoot fairly well on the wing and would like to shoot better, even though we have pretty much killed off all our feathered game. We shall improve in this ambition all the faster if we understand some of the fundamental facts governing good shooting. Most of us are astonishingly ignorant of how or why we do things which perhaps we do fairly well. Yet all good art is based on good theory and good fundamental principles.

We are usually disposed to say that we just pull up the gun and swing on or ahead of the flying bird, and so kill it. Most of us learn to shoot by going out with an older shot, and we have few shooting schools in this country as they do abroad. As a result, we Americans begin to shoot usually while young and learn each for himself—hit or miss, bad style or good style, bad habits or good; but most of us are unable to analyze either the reasons why we hit or why we miss.

For instance, you no doubt declare that when you shoot flying you never see the front sight of your gun. You believe this firmly; but it is only approximately the truth. Also, very likely you think that you shoot with both eyes open; but quite probably you do this only part of the time. Very likely you shoot quail and other fast birds with both eyes open and with a quick swing of the gun, not seeing or knowing that you see the front sight at all. Yet, if you should stop to watch yourself shooting ducks coming in to your decoys, you would be surprised to see that you—the same man—were seeing the whole barrel and rib and fore sight of your gun, and sighting with one eye closed. Perhaps you yourself could not tell just how much you shut one eye on even a fast shot. Perhaps you do not shut it at all. Perhaps, also, you do not realize that one eye puts you on your birds and the other eye puts you down the middle of the barrel.

Good Form for Gunners

Almost any one will agree that no man can shoot well unless his gun fits him. To be sure, a really good shot can take almost any gun and, with a little practice, do good work with it; but much of his success will depend upon his personal habit of aiming and aligning. At a time when the writer was good for more than half his quail, and sometimes a dozen or a dozen and a half straight, he went over into Canada; and, using a straight-stocked English gun, he could account for only eight birds out of twenty-eight shots—much to the mirth of his fellow sportsmen. The truth was that the shooter had been in the habit of shooting with a high head, with a stock not quite so straight, and perhaps in reality with an aim rather parallel to the rib than directly along it. The muzzle of the straight-stocked gun stuck directly up in front and the shooter was all at sea. To handle that gun would have necessitated an entire change of his individual style.

Perhaps Englishmen use straighter stocks than we do because much of their shooting is at driven birds, which come in overhead. It is also the case with our professional trap shots that the longer they shoot, the straighter is the stock that they prefer. Trap shooting, however, is more or less a set and mechanical style of shooting. Some of the best English authorities agree that the American style and position in the field, easy and with head rather high, is more graceful and quite as effective as the

What's a "Free Deal" Anyway?

A grocer buys five cases of breakfast food and gets one free. That's a "free deal." It's a common enough term in the grocery business.

The reason the manufacturer gives the case free is not because he loves the grocer, but because he needs the money. If he didn't give the "free deal" he wouldn't sell so many goods.

The fact that the grocer can't sell the packages fast enough to prevent their spoiling on his hands doesn't worry the manufacturer. If it did he would stop offering the "free deal" and sell his goods *on their merits*.

The "free deal" has been denounced by almost every retail grocers' association and by thousands of progressive merchants, but it is still a persistent evil. There is one brand of corn flakes that is never sold on a "Deal"—and that is KELLOGG'S, the *original* Toasted Corn Flakes. Every package is paid for and is worth paying for. No merchant is ever asked to buy more Kellogg's than he actually requires for his trade. This means constant honest profits for the dealer—fresh goods for *you*.

This signature is a guarantee of quality, freshness and fair dealing.

TRADE MARK
TIRENEW

Makes Tires Look New and Last Longer

Tirenew is a scientific preservative of automobile tires—a liquid unvulcanized rubber coating made of pure para gum—will not flake or rub off and wears like rubber.

Tires are made of layers of canvas, rubber coated to keep out the moisture and resist the direct road wear. The tire, in service, becomes a mass of cuts through which moisture enters and attacks the fabric, causing it to rot. **Tirenew** will flow into these cuts and crevices and waterproof the exposed fabric, adding greatly to the life of the tire.

Tirenew *will also make the tires look bright and new and give the entire car a well-groomed appearance.*

The cost of tires is a large item in the "upkeep" of your car, and a weekly application of Tirenew will be an excellent investment in the added service your tires will give and the improved appearance of your car.

Tirenew can be quickly applied with a brush, and dries in 15 minutes. It does not contain any injurious ingredients and has been endorsed by manufacturers of automobile tires.

Send us $1.00 and your dealer's name and we will send you a trial can of Tirenew, enough for 12 tires, prepaid or through your dealer.

Accept No Substitutes

Our valuable booklet entitled "Tire Care" will be sent free, upon application.

Mr. Dealer:

Are you ready to supply your customers with Tirenew? If you are not stocked up, go to your jobber or write to us for price list of Tirenew. Every automobile owner will eventually become a user of Tirenew.

Manufactured only by
NATIONAL RUBBER CO.
4402 Papin St. ST. LOUIS, U. S. A.

cramped and hunched English position, with the head close down on the gunstock and the shoulders pushed forward. The man who wishes good form in the field should consult rather the theory of form than examples of it as seen at the traps.

Some shotguns, more especially those bored for pigeon shooting, are mounted to shoot a foot or so higher at thirty yards than the point at which they are aimed. A high charge is a better fault than a low one, for the force of gravity is always to be overcome and birds are more often rising than dropping when fired at. The consensus of the best authorities on form in shooting, however, is that the gun should shoot but very little high, and that the lead and allowance should be made by the shooter and not by the gun. Pigeon shooting is no longer very fashionable anyhow.

Most men do not stop to think that the eyes have something to do not only with good scores but also with the fit of the gun and its requirements. Normal young men do not know that they have any eyes at all; but as a man grows older he learns that his eyes have very much to do both with rifle shooting and with wing shooting.

In any wing shot you make there are three points of aim—the breech of the barrels, the fore sight, and the bird you want to hit. Now every one of these points is in a different focus. You can't possibly see them all at once in the same focus; and if you do not align with all these three you miss. This is why you think you do not see the fore sight—you do see it, but don't know it. Your gun must help you, with its exact fit, to overcome this inherent optical difficulty, which is present in all wing shooting and always will be.

The question of lead or holding ahead is also closely related to the stocking of a gun. It can easily be figured out that a bird flying sixty to ninety miles an hour requires a lead of from sixteen to twenty-five feet, at a distance called shooting range. All shooters agree that they never hold that far ahead—and, indeed, they probably do not; but did you never have a gun of which you said that you killed all the left-hand shots with it and missed all the right-hand ones? That brings you up to the question of your gunstock and your distance ahead, both at once. You were sighting off of one side of the barrels and not down the middle, and so had more lead than you thought. Your gun was not cast off right for you.

The Importance of Your Cheek

That you get down the center of the rib with your aim is the one important thing in shooting; and, unless you do this—not part of the time, but all the time—you can never shoot regularly, and your kills can only be regular through grace of the spreading shot charge, a very fluctuating refuge. The width of your shoulder, the prominence of your cheekbone, the distance from your cheekbone to your eye, are all things to be considered just as much as the length of your arm and the slope of your shoulder in really scientific gun fitting.

That the question of castoff is a puzzling one—even to gunmakers—is evidenced by freak stocks, comb-pads, Monte Carlo stocks—all sorts of devices that you have seen used. Have you never taken a friend's gun, thrown it up, and felt after a trial or two that it fitted you better than your own? And have you not had your own stock altered to these other lines only to find that it did not come up just right for you—not every time? Have you never taken a try gun and driven yourself and your gunmaker crazy with the variety of places you found yourself aiming at when you suddenly threw up the gun to take sight? The fact is, the first pitch of the gun is the best one. Especially if you are firing, snapshot fashion, at a piece of paper to try a gun for fit, you will unconsciously adjust yourself to the shape of the stock. Pretty soon you will get all at sea and not know what you are doing or why you are doing it. A good thing then is to lay down the gun and cease trying it. Pitch it up once; then lay it down, leave it alone for quite a while and take an average of these first impressions, so that you will not be fooling yourself unconsciously.

Of course regular shooting means a regular position of hands, cheek, eye and both arms. That gunstock is best which gives you this combination with absolute regularity at all times. We rather sneer at the German cheekpiece; but it is a rattling good idea in determining castoff.

How This New Electrical Hearing Device Makes the Deaf Hear Perfectly

A standard of sound is the one unit that Science has not yet furnished. Power, heat, light, electricity, and practically all forces except sound, have had their standard.

One of the latest developments of Science as regards sound will be most interesting to those who are hard of hearing; it will doubtless revolutionize all the instruments now used for this trouble, of which The Acousticon was the original. It is

A Sound Regulator for the Deaf

The Acousticon was the first instrument devised to successfully enable the deaf to hear; so invariably efficient has it been that there are now many thousands of them in use, not only by individuals, but in churches, theatres, and public buildings.

Heretofore the Acousticon has been fitted to the weakness of the individual ear by a personal application, after the manner that glasses are fitted to suit the requirements of the individual eye.

This most recent contribution of Science, however, will bring great relief and convenience to the hard of hearing, for the problem of fitting the ear has been solved so that it will not be necessary for those desiring an instrument of this character to make long, expensive journeys to secure the most satisfactory results.

The One Difficulty

Conditions of the ears vary with weather, health, voices of speakers, and environments, so that while the fitting was perfect under the old system the strength of the Acousticon could not be altered to meet changing conditions.

If a person with a soft voice spoke to you at an ordinary distance you would hear perfectly, but a harsh, penetrating voice speaking at the same distance would be disagreeably loud and discordant, perhaps unintelligible.

The voices of public speakers, actors, and others vary, while the location in a church or theater makes it desirable to be able to adjust the Acousticon instantly to secure at all times the most satisfactory results.

After seven years of incessant endeavor and experiments we have at last succeeded in developing to the highest degree of efficiency

A Sound Regulator

which gives you the same results that you would obtain if you carried six complete instruments about with you.

By the simple movement of a tiny lever from one button to another the sound is regulated to six different strengths, from the loudest to the softest.

Think what this means!

If you are carrying on a personal conversation the mildest strength will be sufficient—if you are listening to a general conversation in a room-full, however, you can instantly regulate the strength so as to hear distinctly all that is said.

If you go to a Lecture or Theatre, you can quickly adjust the Acousticon to your exact requirements—The voices of actors are never the same; and if one sounds too loud and another too soft, you can instantly change the instrument to suit those voices.

The same way, but perhaps more so, at the Opera; singing voices vary greatly in their power and penetration, and here again you can change to suit your pleasure and comfort.

If you are deaf you know that both ears are never alike in their degree of deafness—you also know how desirable it is to be able to use both ears. With the Sound Regulating Acousticon you can change from one ear to the other at will, regulating the instrument to the requirements of the ear you wish to use.

HOW YOU MAY TEST IT BEFORE PURCHASING

Our confidence in this new Acousticon is supreme. We invite everyone who is interested to make a thorough test of it before purchasing.

We have many offices at convenient points throughout the United States and Europe—If, however, we find that you are not convenient enough to one of these to call in person and test the Acousticon, we will gladly send you particulars how you may test it at your own home before a purchase is concluded.

To Our Customers

You will thoroughly appreciate, we believe, how great an improvement this Sound Regulating Acousticon is over the old instrument.

We therefore invite you to write for the particularly liberal arrangements we have decided to make with our Patrons in the exchanging of our new instrument for the one which you now have.

Faultless Shirts

The patent NEK-GARD is the best thing that ever happened to a shirt. It protects the neck from contact with *front* collar button. Prevents pinching, bruising and avoids that spot. Will not tear. *Makes the best shirts still better.* Ask your dealer to show you Faultless Shirts with the patent NEK-GARD. If he hasn't them, we'll see that you are supplied. They are great value at $1.50 and up.

E. ROSENFELD & CO. Dept. S, BALTIMORE, MD., U. S. A.
Makers of Faultless Night Shirts and Pajamas—"The Cozydozy Kind."

THE NEK-GARD KIND

It brings the eye to the right place all the time; and it does not pound the face if made properly, for the recoil eases off the contact and does not increase it.

The try gun is no infallible guide to a gunfit, as perhaps you may see. The old-fashioned gunmaker would rather have you throw up the gun—empty, of course—and aim directly at his eye as he stood off a little distance. He could then look down the barrel and see where your eye was hitting it—along the middle or at one side. One thing is certain—if you ever in your practice or in your shooting catch your eye hitting the middle of the inside barrel or the edge of the outside one your castoff is wrong and your shooting is bad. Go, then, to a good gunmaker and let him cure your troubles.

Another thing not always considered by gunmakers, especially of cheap grades, is the form of the hand or grip of the gun. It should be rather small than large, so made that the trigger finger will catch both triggers easily, without changing the aim. Another point is that it should be oval and not round in its vertical cross-section. A round grip slips and turns in the hand. An oval grip is more apt to keep perpendicular. And of course you know that unless your barrels are absolutely horizontal, and not tilted to one side, you are going to have a lot of unaccountable misses. This is one of the worst faults in shooting and one which many shooters never discover in themselves. It is largely corrected by the gunmaker who knows how to make a gunstock.

The castoff of your gun can be at the heel or at the comb. If you have it at the heel to too great an extent you may have a gun the comb of which kicks you. The artist in gunmaking sees to it that the recoil eases cheek contact and does not increase it.

The drop of the stock is what most shooters look at, though it is not of so great importance as the castoff. It is easier to pass from a straight stock to a crooked than from a crooked to a straight one. The correct stock is one which automatically gives you your elevation, just as your castoff automatically gives you your line.

Drops and Castoffs

You are not apt ever to change your castoff, but you may change your shooting style; and that changes the drop of the stock. The surest way of shooting is with the eye low and running the full length of the barrel, but that is not the handsomest and not the most practical way in wing shooting. When you try to watch which way a bird is flying you instinctively raise your head to watch it instead of dropping your head. The prettiest field style is not that of the hunched face and shoulder, but of the erect or half-erect head; and fortunately in that style the left eye, which is the one you unconsciously use in locating the bird, with the head held fairly high is the nearest to the natural style of following a quickly moving object. The combination of this, or the equation of it, with castoff and drop, is what must determine you in your fitting. Don't go to fads or extremes; but take that form of drop which will leave you, in view of your personal habits and style, freest to take an easy, graceful and prompt shooting position. Having determined upon your stock, use it all the time and do not change it. Have two sets of barrels, close and open, but do not change your gunstock.

The length of a gunstock is another factor. Trap shooters need a longish stock to relieve the continuous pounding. The field shot usually prefers rather a shorter stock, as sometimes his clothing interferes in bringing up the gun quickly. The field gun should have a stock rather too short than too long, for the former fault can be remedied by a gunpad. Sometimes, too, a thick leather-covered pad, put on without much plan, has helped the castoff of the gun, much to the shooter's surprise and delight. Many shooters use the permanent rubber pad, shaped and bolted to the bottom of the gunstock.

Having, with prayer and humility, undertaken the subject of the stock of your gun, you should make a study of the other parts—more especially the breech and the rib. Is your favorite gun flat across the breech or hollowed? Is the rib flat throughout or does it hollow and taper and drop in the middle, thinning down and rising toward the muzzle? How much of the rib do you see when you throw up the gun to fire? Is it your habit to hold with the bird

To work or play the better way

There's a wealth of health in flying to work or sailing through the country on an **Excelsior** *Auto Cycle*. Satisfaction too, in knowing as you whiz past street cars and friends afoot, that you're making time and saving money.

And with your Excelsior, you're free from the jolts—the balks—the watching troubles—that accompany the ride of a less efficient motorcycle.

EXCELSIOR *Auto Cycle*

The One Machine That Keeps You Clean

has set a pace in the motorcycle world that no other machine has reached. It's more than a bicycle with an engine—it's a two-wheeled roadster. Gives you the ease and comfort of a high priced car—the speed too, *if you want it*, and at a fraction of the cost.

The Excelsior is the Samson of the trail. Every machine is reinforced. The handle bar stands on heavy roads. The low-hung engine gives stability. You'll buy a motorcycle sometime, begin with the most efficient. The Excelsior saves you money and regret.

Free Write *for our interesting booklet,* "The Motorcycle and the Motorcycle"—an illustrated catalogue.

well above the barrel or dead on? Do you see the false breech at all or only think you see it? Do you think you see the front sight or are you sure you do not?

The maker of your gun had a great deal to do with the answer to each of these questions when he fitted the barrels and the rib. You do the rest with your eyes—and probably you do not understand your eyes. Of course you know you must get a clear focus or a clean miss.

What you see—though you do not know it—when you aim and shoot is a very much blurred impression of the breech of your gun—a sharp definition of the fore sight if you shut one eye—no conscious definition at all if you use both—and the moving object which you want to hit and which you see with the other eye! Now you cover these three points in one swift movement.

It may be seen, therefore, that the breech and the rib of the shotgun also have much to do with your successful work. Moreover the style of your gun and your style of shooting are interrelated. If you drop your head low along a rib which is deeply sunk, and which tapers up at the muzzle, you catch sight only of the front end of the rib. In doing this you do not align the entire piece so well as you would if you were gazing down the entire length of the rib. Most makers build the rib in this way, however, because they know this has a tendency to make the shooter keep the muzzle rather high, which is a better fault than to have it too low. In theory the flat rib is best, but in actual practice it seems to lead to the rather crooked stock. If it means that the breech of the gun is flat all the way across it is still less desirable. Some good makers use this sort of rib—flat throughout its length; but the average in building is with the hollowed and sunken rib. Of course it really makes no difference what the rib is if you do not see it while you are in the act of shooting. In practice, most of us shoot with the hazy idea that we are in the middle of the false breech of a gun, and in the middle, at least, of the front end of the rib.

The Gun That Shoots by Itself

As you drop your head low in practice or shoot high-headed, or perhaps level the gun really below the line of your sight, you will see your bird just clean above the muzzle or not covered by the muzzle. And perhaps sometimes, even if you throw the gun high, you may seem to see the bird directly through the stock and the false breech of the gun—a thing impossible, of course, except for the curious construction of the human eye.

Your habit, your desired or acquired style, and your personal equation will govern you in the selection of the rib and false breech of your gun, which have as much to do with your success as the castoff and drop of your stock. Perhaps it will be safer for you to select a gun which has the barrels so fitted that there is a distinct depression between the breeches of the two barrels. Your eye drops into this naturally, as it does into a rifle sight; but, at the same time, the moving object is not in the least obscured, because that, as we shall show later, is very likely seen by the left eye while you are aligning the gun with the right—or vice versa if you be a left-hand shooter. The writer owns a gun made by a once famous American maker, long since dead; and nearly every one who tries this gun shoots it well in the field. It has this depression at the breech and a fairly clear look along the hollowed rib. With a rational drop and proper castoff, it is quite easy to shoot with such a gun; in fact, the gun will almost go out and shoot by itself. The eye naturally catches it in the middle.

Practice or habit may govern very largely in the selection of your gunstock, rib and barrel fitting. As we have pointed out, the tendency is to adjust oneself and one's style to the gun. That is why every one shoots best with his old gun—the one he has had for years and with which he had shot all kinds of game. He has grown used to it. Toward such a weapon the modern sportsman feels as the old warrior did toward his sword—he has confidence in it and knows what it will do. At the same time, if you have not yet perfected your skill in wing shooting to a point where it suits you, you will do very well to go and have a heart-to-heart talk with a good gunmaker—not a rule-of-thumb man, a smith and not a thinker, but some one who has, like yourself let us hope, studied some of the reasons why a gun should fit and why sometimes it does not.

The Sampler

Shows the Fruits of 70 Years' Growth

Whitman's started in 1842 to make chocolates and confections. In 1912 they have produced this *Sampler*, containing lots from ten of their most praised packages—enabling you to pass judgment on many kinds of sweets with utmost convenience.

Tipped in the package is a loose leaf describing each of the ten packages that is sampled.

The Sampler box is covered with a facsimile sampler in the quaint old-fashioned needlework that has become the prevailing new fashion. All women appreciate its exquisite workmanship.

You can buy the *Sampler* for one dollar at the selected stores everywhere that we supply, by express, direct from headquarters. You can tell the store—usually it's the best drug store—by the sign:

AGENCY Whitman's CHOCOLATES CONFECTIONS

Buy from your local agent. Where we have no agency we will send the *Sampler*, postpaid, on receipt of $1.25. Write for a copy of our "List of Good Things," describing and pricing seventy sorts of sweets in sealed packages.

THE RECORDING ANGEL

(Continued from Page 22)

beginning to shed the deprecating cowardice of his former despair and was developing a little weedy courage as a man. This may have been due in part to the prominence of his position as Bone's right-hand man; but strangely illuminating interpretations he found in the browbeaten, timid virtues of a certain young publican who figured in The Town Testament undoubtedly contributed to his growing self-confidence—which is often the only virtue a drunkard lacks. Meanwhile the piety of Mrs. Martin had undergone an eclipse of singular modesty. The old lady was confused. For the first time in her life she felt a diffidence in her business of holding up sinners and castigating them for faults.

The significance of these and many other changes in the manners of Ruckersville saints and anti-saints did not escape the all-observant eye of Jim Bone. He was very far from betraying Amy's secret, and he was still farther from betraying to her the deception that he perceived Elbert was practicing upon her. He was, in fact, considering the possibility of emulating that worthy's example.

It had been his intention to declare the real nature of the Bone Building gently, as soon as the interior was finished, by putting on an innocent, highly sentimental melodrama. But the more he considered the somnambulance of the town, the more salutary he thought it might prove to give the people a mirror drama of their own existence. Nothing is so startling to a man or a community as a sudden vision of himself or itself from the outside. This is sure to prove a stage in the development of muckraking, which is now being accomplished more or less lamely at a too great magazine distance from the place where obnoxious conditions exist. When some local playwright learns to dramatize diseased municipal governments and puts the play on at home, where it belongs, we shall have more immediate results, and not so many thieves will be retained in office after the next election. There were no thieves in Ruckersville because there was nothing for the town council to steal, no franchise to grant, no water tax to sequester. But there was a criminal amount of negligence to be portrayed and a strain of misleading, vindictive piety to be exploited. Bone desired, with a wit that was half humorous and half friendly, to deliver this community from the bondage of lock-step hypocrisy beneath which so many respectable communities, especially in the South, suffer and decay.

Through Daddisman he collected those issues of The Monthly Mercury that contained installments of The Town Testament. And he spent his evenings during the early part of November whistling and sniekering over them in his room at the hotel. The artless veracity with which the author had portrayed life as it appeared and disappeared, modified and accommodated to the varying natures, virtues and vices of different persons, but always the same life of the same town, always dammed and obstructed, seemed to him marvelous. It was not a story, but an unconscious indictment, which he concluded might be dramatized more or less advantageously for the victims.

He was destined never to know how incomplete and partial the record was. If, when he was thus engaged in admiring the fullness and accuracy of details it contained he could have known what was going on in some sacred maiden chambers along Elbert Avenue, he would have comprehended how little is known or can ever be known of men and women as the pitying angels see them. For these were days particularly hard upon certain ladies' complexions already past the satin smoothness of youth and increasingly inclined to shrivel and wrinkle in the frosty winds of approaching winter. Every evening Mildred Percey stood before her mirror, hair brushed up and knotted tightly upon the top of her head so that not a strand could escape. There was a row of cold-cream jars before her, and fastened to the pin cushion was a slip of paper to which she constantly referred as she went through frightful contortions, as she rubbed in the cream and stared at her glowing image in the glass. Presently she laid her head back upon her shoulders, dropped her lower jaw,

BISHOPRIC WALL BOARD

Saved $1200 From the Estimate

Applying Wall Board to Building

Wall Board in place of plaster, Sheathing in place of lumber. $1200 saved by Bishopric Asphalt Mastic construction—a far better building than have been made with old-fashioned Bishopric Wall Board makes the most fire-resisting, air-tight, water-proof, wind-proof and vermin-proof in sheets 4 x 4 feet ready to put up. Any man who can drive nails can put it up—no waiting for drying. Saves a third in building. You can build or improve buildings in any kind of weather

For Every Kind of Building

Bishopric Wall Board costs less to put up and is far better. It is used in the finest Residences—Cottages, Bungalows, Flats, Offices—Apartment Buildings—Schools, Churches—Factories. Take part of the burlap or any wall decoration, or paint it in highly artistic or natural gray tint. Liberty Refining Co. 431 Liberty Ave., Pittsburgh, Pa.

then released it with singular contortions and twistings of her neck muscles, all the time counting:

"One, two, three, four; one, two, three, four."

Next she pinched the soft fold of flesh under her chin till it flamed, and finally she wrung a cloth out of a basin of water and swung it rhythmically in the air round her head before applying it to the afflicted part. One might have inferred that she was practicing the cruel rites of a chastening penance. As a matter of fact she was engaged in the effort to rid herself of a double chin according to the directions of a company in New York that was making a fortune by selling these directions to ladies similarly burdened with this evidence of too many years.

Mildred had accepted her double chin without a murmur until the appearance of Jim Bone in Ruckersville. Now she was passionately determined to be rid of it.

At the same hour Mary Yancey stood before her mirror similarly engaged with the identical directions. Mary's trouble was exactly the opposite to that which made Mildred's days a burden to her. She was so thin that the frame of her chin needed padding. And she believed herself to be laying on sweet folds of pink fat as she massaged her face and neck. One thing to note in passing is the credulity of women, upon which a very profitable business was founded. The beauty company sold the same directions to both fat and lean customers, guaranteeing to each the desire of her heart at the very reasonable sum of five dollars.

Comedy is often pathos turned wrong side out. Nothing could have been more diverting to watch than the switchings, pinchings, pattings, cruel applications of hot and cold water with which the mature maidens of Mr. Bone's acquaintance afflicted themselves. But if you understand the reason it was heart-rending, especially as Mildred's chin remained blandly double and Mary's continued to hint at the narrow pointed shape of her skeleton. However, these secrets of the feminine heart are too sacred to be exploited upon any stage. They belong to tragedy, not to comedy.

Bone's correspondence with a certain playwright in New York ended by his tearing out all the installments of The Town Testament from The Monthly Mercury and sending them to this same address. Then followed weeks when that functionary who combined the businesses of being both the station agent and telegraph operator at Ruckersville, was often puzzled by the hurry-up messages that Bone sent to this person or persons in New York. He was astonished by the extravagant number of words that Bone's telegrams contained and especially by their enigmatical character.

Sometimes Magnis & Luster ordered goods by wire, often cotton buyers sent and received information to and from their firms; but the little agent could make nothing of an order for "stars" and "scenery." The thing that distracted him and excited his curiosity beyond bounds was Bone's repeated wires declaring that he must have "an old star of gentle and agreeable appearance."

"What the deuce is this old star brand of goods?" he murmured to himself.

The agent scratched his head and wondered if he ought to speak to somebody about it, when Bone, who had apparently satisfied himself with a star of sufficient age and respectability, sent another enigmatical message. It read:

"Must have twenty girls, good shapes and limber-legged."

A man might be rich and powerful and industrious, and still be crazy, reflected the telegraph operator as he filed this message. There was no doubt about Bone's wealth or his enterprise. Everybody felt it. He had become the village cocktail. He was the very highball of its existence. The town was beginning to boom. There was talk of a cotton factory in the near future. Strangers were frequently seen on the streets or driving out with Mr. Bone to examine the property of the famous Broad River Power Company, which had bankrupted so many of the descendants of General Joe Rucker in their efforts to harness it for gins and mills. What the poor little old operator could not understand was why a man so much engaged in strictly business affairs telegraphed for twenty good-shaped, limber-legged girls.

(TO BE CONTINUED)

Tooth Preservation Involves more than Toilet Refinement

It is a Matter of Science

Pebeco Tooth Paste reaches the chief cause of bad breath and bad teeth—it neutralizes the mouth-acids that gradually break down the enamel of your teeth, and it destroys the bacteria that makes these acids. Pebeco Tooth Paste used daily is

Protection Against "Acid-Mouth"

and to remove these mouth-acids means that you have a good chance to keep your teeth for life.

PEBECO
TOOTH PASTE

is the most delightfully refreshing cleanser, polisher, whitener and deodorizer; that it makes your mouth a safeguard against the entrance of disease, hardens your gums, purifies your breath and stimulates the salivary glands. And having done all and more than the ordinary dentifrice can do, Pebeco has "just begun to fight." For it is here that science steps in and makes it *the* dental preparation that is able to counteract the cause of 95% of all tooth-decay, by preventing the acids of the mouth from eating into the enamel of the teeth. Ask your dentist.

Pebeco is the product of the hygienic laboratories of P. Beiersdorf & Co., Hamburg, Germany, and is sold all over the world. Your druggist has it or can quickly get it. The extra large 50c tubes are economical because only a small quantity is used at each brushing.

Ten-Day Trial Tube and Acid Test Papers Mailed FREE

Send the coupon below, a letter or postal request, and we will send you a ten-day trial tube of this scientific tooth paste, with a free package of Acid Test Papers with which you can prove Pebeco's perfection at our expense. "Will your tongue turn the blue test paper pink?" Try the test yourself—it is interesting and scientific.

Amatite ROOFING

He Never Paints His Roofs!

A FEW years ago, Mr. George M. Chandler began using Amatite Roofing. Mr. Chandler is the owner of Meadow View Farm in Avondale, Pa.

In 1905, he covered one of his buildings with Amatite Roofing. In 1908, his barn burned down. The Amatite Roofing was literally covered with sparks and burning embers. No harm was done to it, however, owing to its mineral surface. The roof is now seven years old. It has never been painted or received any care and is still in excellent condition.

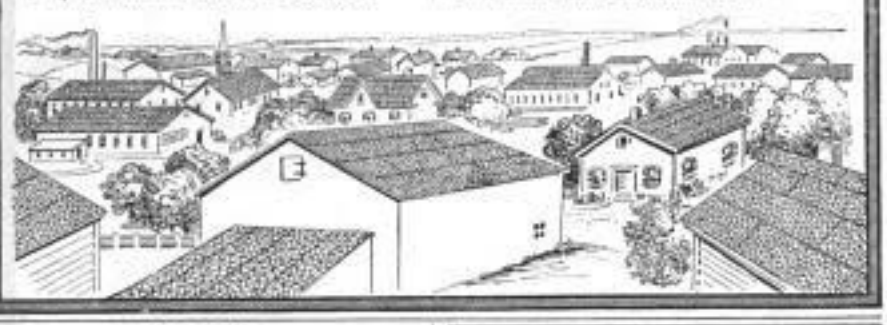
He rebuilt his barn as a mushroom house and covered it with about 5,500 feet of Amatite. He also used Amatite on his chicken houses, both as roofing and siding, the walls being nearly but not quite perpendicular. All told, he has used 15,000 feet of Amatite during the past seven years.

None of these roofs have required painting or will require it. They take care of themselves. After the roofing is laid, the owner's troubles are ended.

Here's Mr. Chandler's letter:

"I have used a great deal of your Amatite Roofing with much satisfaction, and believe that it gives longer wear for less money than any other roofing made.

"I was induced to purchase Amatite Roofing from the fact that it never needs to be painted. Once it is on the roof it is sure to stay tight without painting or care of any kind. I also think it is the best looking roofing made. When the sun is shining on it the mineral surface sparkles like cut glass, and many of my neighbors have spoken to me of its handsome appearance."



It's the old story—as soon as a practical man realizes that he can get a roofing that will give first-class durability *without painting*, he refuses to bother with the old-fashioned kind.

Send to nearest office for sample of this splendid no-paint Roofing.

THE APPLE OF DISCORD

(Continued from Page 17)

"I must say, though, he pays for 'em. Clare got a sketch, you got an apology—and I wonder what Ada got? Too bad I spoiled Clare's sketch; if I'd known he'd come ashore on a kissing expedition I'd have let it alone. But think of Ada! Ada of the serene eyes and steady pulse! I'm beginning to admire this man Lanier. Hanged if he hasn't gone and kissed three pretty women in two hours—and I've lived a kissless life for a month and am nearly starved to death!" He looked at his companion and grinned. It was not often that one got a chance to chaff Mrs. Wilmerding.

Rather to Ravenel's surprise she seemed not to have heard his banter. The little frown still rested on her forehead, but the expression about her eyes was thoughtful rather than annoyed.

"Ravel," she said presently, "we got no more than a glimpse of that tableau down there; but, all joking aside, did anything about it strike you as peculiar?"

"Yes," he answered promptly. "On the breakaway after the clinch it struck me that Ada was forcing the fighting. Didn't stop to make sure, I was that shocked at the spectacle."

Mrs. Wilmerding did not smile. She was staring pensively at the hulk alongside which Lanier's boat was just arriving.

"Those two have met before," said she slowly.

This time it was Ravenel who got the spur.

"What?" he cried sharply. "Met before? Here? You mean that he's been hangin' round Ada? By George, I believe you're right! So that was what made him so sore when the committee turned him down! That's the reason he came here in his old tub and anchored off the reading room! And—" his words came more slowly—"that's the reason that Ada spends so much of her time wandering about alone, down on the end of the point, and taking solitary walks after dinner." He stopped and looked at Mrs. Wilmerding with a scowl. "Look here, Loretta, after all it's none of our business. We stumbled on this affair by accident. Let's stick a knife through what we know and let it expire right here. After all, Ada's had a pretty rough time of it with that old rounder, Stackpole, and if she wants ——"

"Hush, Ravel," Mrs. Wilmerding interrupted; "you are talking like a vicious, modern play! This man Lanier must go! He must go at once! There are plenty of places for such unfortunate affairs, but the Chimney Corner is not one of them! Lanier must go! Of course nobody must ever know what we have witnessed."

"Well, rather not! But don't you think that perhaps you may be jumping to a conclusion?"

"No, Ravel. The whole thing is as clear as the lenses of that lighthouse yonder. It needed only this to explain a deal of what has puzzled me. In the first place, there was Ada's unexpected separation, which she tried so hard to make an absolute divorce. Then her coming here to live with her aunt and uncle all summer, and at the same time Lanier's application for membership. Why should such a person wish to join a quiet, old-fashioned colony like ours? Then his fierce resentment at being refused ——"

"But you told me that it was Ada herself who started that opposition."

"Yes, it was. That is the most suggestive fact of all. At the last moment she saw the folly of it."

"Lost her nerve?"

"Came to her senses," said Mrs. Wilmerding austerely. "Perhaps the kindly and soothing influences about her may have had something to do with it."

Ravenel smothered a grin. Fortunately Mrs. Wilmerding was not looking at him. Her face had assumed the expression of Diana sitting in judgment over the offending nymph.

"I do not wish to make any uncharitable accusations," said she, "but the situation as it now stands is quite impossible. Even in the brief glimpse that I caught of those two on the beach I could see, if only from the expression of the two figures, that it was Ada who was trying to detain Lanier. He is a clever *intrigant* and knows better than to enact a love scene under such

With our Compliments

Don't let this surprise you—there is no string to it, no comeback, just a plain, straight offer. We want you to use, with our compliments, a **Gem Damaskeene Blade** to convince you that nothing excels it.

Send us two names to-day—yours and your razor's, and we will mail you, Free, a **Gem Damaskeene Blade.** One trial and you will use no other.

Though especially adapted for a **Gem Junior** frame, these blades fit most safety razors.

The Gem Damaskeene Blade, 7 for 35 cents, are wonderful. Gem Junior Razor, $1.00, complete, with 7 Damaskeene Blades, sold everywhere.

circumstances, especially now that he feels that he has the situation in hand. The other day he got round the men and today he quite hoodwinked me. I might as well be frank—I was actually very sorry for him, otherwise I should never have permitted his familiarity."

Mrs. Wilmerding's righteous wrath was mounting rapidly. The thought of how she had compassionated Lanier's sad and lonely existence was, under the circumstances, quite maddening. Worse than that was the recollection of his salutation at parting. She bit her red underlip, and her blue eyes flashed.

"Come," said she, "let's go back. I want to stop and speak to Clare."

"You're not going to tell her what you've just seen?" inquired Ravenel.

"Of course not."

"How about Ada?"

"I shall say nothing to Ada. All of my efforts shall be centered in getting rid of Lanier. I shall send him a note tonight that will probably result in his leaving our vicinity without any further delay, if he has any sense of decency whatever."

Ravenel scratched his chin, then turned and gave his companion a rather quizzical look.

"Well?" said Mrs. Wilmerding sharply.

"Strikes me you're forcin' things a bit, Loretta. After all, your evidence is purely circumstantial. You haven't any proof that he and Ada have seen each other here. Besides, it's strictly her affair. Doesn't strike me as quite the thing to act on information that comes from overseein' something by accident. What are you going to say to him?"

"I shall say that his further presence in this neighborhood may result in compromising a woman who has suffered quite enough, and that I have decided to hold him to his statement that he would leave at my request. I shall also apologize for having intruded a second time upon his personal affairs. The main thing is to get rid of the man. We have had quite enough of him!"

"All right," said Ravenel indifferently. "You're the A 1 at Lloyd's—the seagoin' chaperon. Personally I've no reason to love the scoundrel for poachin' on my preserves."

"Don't be vulgar," snapped Mrs. Wilmerding, and turned to retrace her steps, Ravenel lounging at her side. Arrived at the O'Sullivans', Mrs. Wilmerding said:

"I want to see Clare alone. Run along, Ravel."

He grunted and continued on his way down the path. Mrs. Wilmerding went to the stable and up the stairs to the studio, where she rapped on the door.

"Who's there?" came a low-pitched, throaty voice.

"It is I, Loretta. May I come in, my dear?"

"Yes, if you like," was the not too polite reply. Mrs. Wilmerding opened the door and entered. Clare, in her paint blouse, brush and palette in hand, was standing before her easel on which was a half finished sketch. Her face was flushed and slightly puffed about the eyes, and her heavy auburn hair was tumbled about her ears. She glanced half sulkily, half defiantly at Mrs. Wilmerding. "If you've come to scold," said she, "I had better tell you that it's a bad time for it."

"I have not come to scold," said Mrs. Wilmerding gently, "but to apologize. I hope you're not angry with me, Clare, for what I couldn't help."

"Oh, no," Clare answered; "it wasn't your fault. But I've had a fight with Ravel and it's upset me. Did he tell you?"

"Yes. He acted very badly and he's sorry for what he did."

Clare laid down her brush and palette and sank into a big chair. Mrs. Wilmerding had seated herself on the divan. Clare looked at her inquiringly.

"Did you say anything about me to Calvert Lanier?" she asked abruptly.

"Yes. I told him that I was sorry for having unconsciously intruded and went on to say quite frankly that I thought that he had not acted nicely."

"What did he say?"

"He questioned my right to criticise. But that is not what I came to talk about, Clare. I came to apologize to you and to beg of you not to see this man Lanier again."

"Why not? He is a gentleman and a genius, and I like him. What happened this afternoon was entirely my fault."

"It is not on account of what happened this afternoon that I ask you to see no more

***The* Fabric that is SURE to meet with your Approval!**

"Well, how is it, Mr. Tailor?"

"How do *you* like it?"

"It looks good to me. I'm *sure* the cloth is right because you can't go wrong on the American Woolen Co.'s Puritan Serge. It's becoming and it stands up. But you are the doctor as to fit and tailoring."

"Well, sir, I'm proud to say the work in that suit is worthy of the cloth. It's a pleasure to make a suit of Puritan Serge because, no matter how long it's worn, it's a credit to the workmanship put into it."

PURITAN SERGE 1620

A thoroughbred style fabric for the man who cares

—is one of the most beautiful rich shades of blue ever woven. It is a distinctive serge, with the warmth of sunlight in it, with a draping quality and feel that mark the true style fabric. Pure wool, through and through. Thoroughly dependable. Width 58-60 inches. London shrunk.

Tell your tailor you want Puritan Serge. He has it or can get it. Puritan Serge is also used for high-grade ready-to-wear suits. The name is stamped on the back of the cloth. PURITAN SERGE

If unable to obtain Puritan Serge, send us the name of your clothier or tailor, with money order or check for quantity required at $3.00 per yard (3½ yards for man's suit), and you will be supplied through regular channels, as we do not sell at retail.

of him," said Mrs. Wilmerding, "but for quite another reason. Calvert Lanier is less the gentleman than you think, my dear. I have good reason to believe that his sense of honor is not of a sort to pass muster with people of our class. Please don't ask me to tell you how I know this, because it would not be right for me to tell you. Will you not be willing to take my word for it and agree to have nothing more to do with him?"

Clare made an impatient gesture. "You needn't be afraid," she answered. "I have no intention of trying to see him. The sanctity of the Chimney Corner is safe enough, so far as I am concerned. And there is no possibility of his trying to see me. Calvert Lanier is too busy with his own affairs to bother about ours anyway. And so far as his moral character is concerned, I'm not really interested, my dear."

Her violet eyes rested a little maliciously on those of her guest. "It's no worse than Ravenel's, I fancy, and Ravenel is a bit of a brute besides." She slipped from her chair, stepped to a corner of the studio, and picked up a panel that was covered with an excellent background of fresh paint. "That's Ravenel's work," said she. "Calvert Lanier's was a lot more attractive." She placed the panel aside and flung herself back into her chair, then stared defiantly at Mrs. Wilmerding.

"Sometimes I positively hate Ravenel," said she.

Mrs. Wilmerding rose. She saw that there was positively nothing to be accomplished with Clare while the girl was in her present mood.

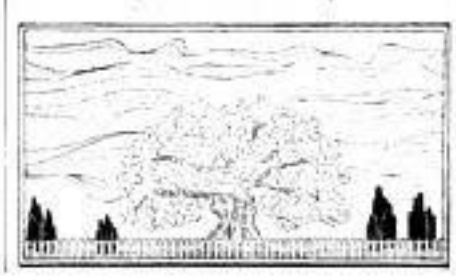
"I'm sorry, Clare," said she. "You must remember that Ravenel is only a boy, and all boys are savages more or less. But you are not angry with me, are you? Because I really love you. I'm not thinking about the Chimney Corner, Clare, but of you, dear, and I couldn't bear to think of you here alone, hurt and unhappy. That was my principal reason for coming over to see you."

Clare's hot, Celtic nature responded to this touch of sympathy as gunpowder to a match. She sprang from her chair.

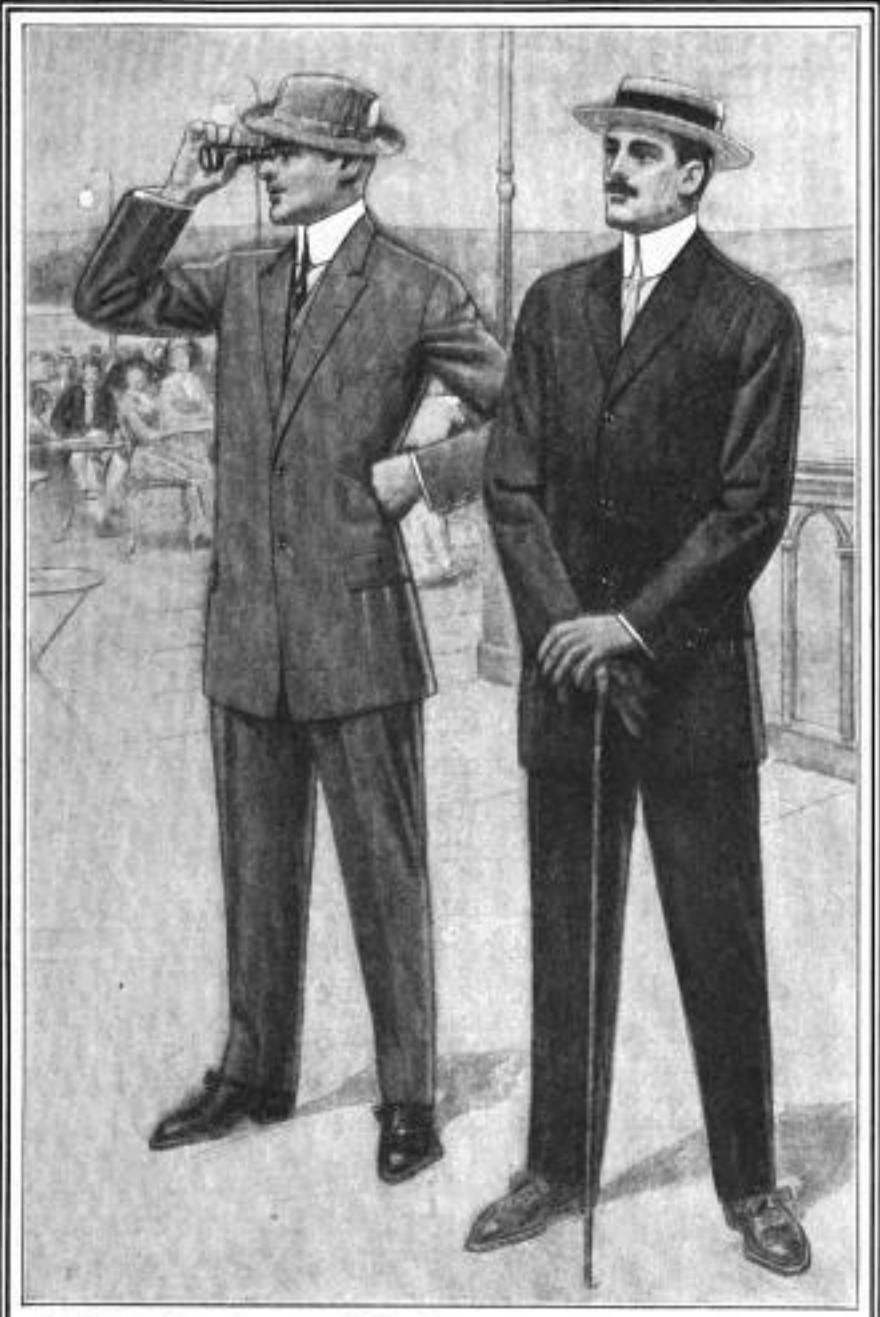
"And I love you, Loretta," she answered warmly. "I know that you are sweet and dear. And I'll never forget how you stood by Ravel when everybody was giving him the cold shoulder—and I wanted to kill them for it." The tears gushed into her eyes.

Mrs. Wilmerding kissed her and went out. She was a clever woman and warm-hearted, yet as she walked pensively back to her house and happened to glance in the direction of the summer studio of Calvert Lanier the expression that crossed her face belied these softer qualities. The emotions that inspired this expression took concrete form in a note that she dispatched within the half-hour and that read as follows:

My dear Mr. Lanier: Please be good enough to accept, for the second time in the same day, my sincere apology for the same offense—namely, that of intruding quite unintentionally on your own private affairs.



You will remember having told me that you would immediately leave this vicinity at my distinct request. I did not make the request at the time, but on more deliberate thought I have decided to hold you to your agreement, and therefore ask you to leave our vicinity at the earliest opportunity.



Yours very truly,
LORETTA WILMERDING.

This brief but succinct note she dispatched at once by her boatman, who accomplished his errand in what seemed a remarkably short time, and returned to be met at the boathouse by Mrs. Wilmerding, who wore an air of impatience.

"He says there wan't no answer, ma'am, and that you would understand," was the report of the messenger, who added laconically, "seemed sort of put out when he said it tew."

GUNN FURNITURE COMPANY, 3 Victoria St., Grand Rapids, Mich.

The Pearls of the Princess Patricia

(Continued from Page 7)

"Tell the chauffeur where to go," said the colonel briefly.

"Yes, sir—very good, sir." The man touched his hat and told the chauffeur. Their motor pulled out of the line and turned to the west.

"Mr. Walton was at Eton with the duke," explained the colonel to Mr. Boon.

"J. G. Walton?" asked Mr. Boon.

"Yes."

"I didn't know he was educated in England," said Mr. Boon in a tone that implied he knew Mr. Walton well.

"Didn't you?" said the colonel more sharply than the occasion warranted.

"But then we never discussed the subject," apologized the jeweler.

"Do you know the house?"

"Yes. I've been in it several times. I understood Mr. Walton was in Florida and had rented his residence for the winter."

"I don't know a bally thing about his private affairs," said the colonel coldly; "but I do know the duke intended to visit him, and I've been told to go there."

It occurred to the store detective that if the Englishman was rude to Mr. Boon it was altogether likely the duke treated his private secretary as a servant. It gave the detective pleasure to imagine this, for whenever the colonel had looked at Mr. Donnelly it was with the casual indifference with which men look at chairs or cobblestones. This made T. Donnelly feel that he was not alive, and he disliked the aristocratic undertaker.

The motor turned into Fifth Avenue, sped northward and halted before a house. Mr. Boon recognized Mr. Walton's residence.

The colonel alighted quickly and said "Come with me!" in the tone foreigners use to menials, and didn't even turn his head to see if he was followed, but walked up to the door and rang the bell.

A man in livery opened the door.

"I am Colonel Lowther!"

"Yes, sir. His Royal Highness said you were to wait in the drawing room unless there was somebody with you; in which case you were to be taken to him, sir."

"Come on!" said the colonel to Mr. Boon and the private policeman. The footman preceded them to a door at the back of the foyer hall, opened it, drew back heavy portières and announced solemnly:

"Colonel Lowther!"

The colonel entered. So did Mr. Boon and Donnelly. A man stood gazing out of a window. His back was toward them. For the first time Mr. Boon—so he said later—felt that something was wrong. Yet he made no effort to protect himself.

"Your Highness, here are the pearls."

The duke turned round. He had a kindly face, had white hair and mustaches.

"Let me have them!" said His Royal Highness in the husky whisper of a man suffering from acute laryngitis or partial paralysis of the vocal cords.

"I know that voice!" shouted Donnelly, and the jeweler knew he might fear the worst; but, before they could put their hands in their pockets for their revolvers, strong fingers took strangle-holds on their throats, a spray of ammonia had been squirted into their nostrils and eyes, and they were helpless. In a jiffy their wrists were handcuffed behind their backs, their feet were fastened with leg-irons, their mouths pried open with a bowie-knife blade that made them cease struggling. Pear-gags were inserted into their mouths. Donnelly squirmed and carried on like a frightened child—but at the same time kept unfrightened eyes on the duke. Not so Boon, who was as pale as ivory.

The duke turned his back on his captives and put on a black cloth mask, but the watchful Donnelly noticed that he put into his pocket what looked like false mustaches. He also donned a pair of black gloves, but not before the policeman had seen a long white scar, beginning at the knuckles and disappearing up the wrist into the cuff. Donnelly recalled having heard or read a description of a professional crook that tallied with what he had seen. It would make the work of capture easier.

The masked duke picked up the precious valise and said: "Take them to the others."

The four men who had nearly strangled the jeweler and the policeman were dressed in overalls and jumpers, had on black masks and wore gloves. They carried the helpless victims into what seemed to be the servants' dining room.

Propped up in high-backed chairs, Jesse L. Boon, of Welch, Boon & Co., saw Mr. Wilfred Gaylord, president Goffony's, Mr. Percival Pierce, of Jones & Pierce, Mr. J. Sumner Storrs, of Storrs' Sons, and five of their clerks. Beside Mr. Pierce was an empty chair. Mr. Boon was placed on it. The detectives were dumped on one near Goffony's chair.

"Tie 'em in couples," whispered the duke. Each man was tied to the man in his chair—and the chairs themselves were tied back to back.

"That," explained the colonel, "will prevent you from hurting yourselves by toppling over in regrettable efforts to reach the door. We wish no harm to befall you. What?"

The masked men in overalls left the room like perfectly trained servants.

"You are a damned fool!" whispered the duke angrily.

"Why?" amiably asked the Englishman.

"The only people that don't talk are those that can't."

"I know—but murder will out! Never knew it to fail. We have—ah!—practically borrowed a few things from these gentlemen. They may get them back possibly; but you can't ever give back the breath of life if you destroy them. What?"

"I tell you I will not leave them to your blab!" hissed the duke; and Boon could not help thinking of the anger of a cobra-snake with laryngitis. "A slight cut in the jugular and they'll bleed away painlessly. Just before the end they will begin to dream. By ——, I'll do it! Right now!"

The duke pulled out a barber's razor, opened it and approached Boon.

Something about his manner and the jeweler that this creature was about to cut their throats as much for the pleasure of it as because of the supposed safety. It was confirmed when the masked man whispered malignantly:

"It's sterilized!"

Mr. Boon was suddenly conscious of an extreme cold, as if he had been thrust naked into an ice-cave. On Pierce's face grown gray, the sweat stood in minute drops of dew. Gaylord's florid face was livid and tense; J. Sumner Storrs had closed his eyes and seemed asleep, but the breath came unpleasantly through his nostrils.

"Stop!" said the colonel so sharply that the duke turned like a flash—to look into the barrel of a blue-steel automatic.

"Drop the razor, old chap! I can't let you kill the beggars in cold blood. It's—by my soul, I can't, you know." His hand was jerking and twisting at a furious rate, but the revolver was as steady as a rock.

"It's our only chance. It won't hurt them. They won't feel it any more than a feather—it's so sharp," whispered the black-masked devil.

"Drop it, I say!" said the colonel peremptorily. They heard a gritting of teeth from behind the mask as the duke threw the razor and dropped it on the floor. Then, covering his accomplice, the colonel put his foot on the weapon.

"Thanks, old chap!" he said pleasantly. At that very moment he could have crystallized the gratitude of the ten persons at many thousands.

"Fool!" came in a husky whisper.

"Oh, now! I say!"

"What's the difference between two years in the pen and twenty seconds in the electric chair? I myself prefer the chair. But I'd rather cut their throats and be out of danger. I tell you, it's tempting Providence to leave these men——"

"Is it as much as twenty years, old fellow?" queried the colonel, slightly perturbed. The duke nodded.

"I say, gentlemen, I don't want to do twenty years indoors, you know. But—it's not a pleasant thought. What? If I give you your lives you must not take away my liberty. So I will go out now and leave you here with my friend, unless you promise not to tell the police anything that may serve as a clew and yourselves do not try to harm us. If you will act like gentlemen I'll undertake to prevent my friend here from severing your respective jugulars. Nod for 'Yes' and shake your heads for 'No.' Promise not to talk?"

Ten heads nodded vehemently.

"Come, old chap; you must take their words. Gentlemen, you will be re-

SHOEMAKER'S BOOK ON **POULTRY**

and **Almanac for 1913** has 228 pages with many colored plates of fowls true to life. It tells all about chickens, their prices, their care, diseases and remedies. All about **Incubators**, their prices and their operation. All about poultry houses and how to build them. It's an encyclopedia of chickendom. You need it. **Only 15c.**
C. C. SHOEMAKER, Box 913, Freeport, Ill.

this evening without fail. We must have time to leave New York. Avoid the reporters as you would the plague. It would not be wise to publish the facts! Think of it—the heads of the great firms! In parting from you, gentlemen, I wish to thank you in behalf of the Tainted Wealth Reducing Syndicate, to the success of whose operations you have in this instance so generously contributed. Gratitude surely is not incompatible with business methods. Gentlemen, again I say: Thank you kindly, and—why not?—*au revoir!*"

And that was the last the captives saw of the man who, on behalf of the Tainted Wealth Reducing Syndicate, had reduced the holdings of pearls and trinkets of New York's most famous jewelers by a trifle over one million dollars' worth.

It was nearly closing-time—midnight—that night when two men entered P. T. Ayres' corner drug store. One of them wore a fur overcoat and a silk hat. The other was dressed in black, had a mourning band about his hat and wore black gloves. He carried a bag on which the sleepy lady cashier saw the L and the cabin tags of a transatlantic line. The man in black said to her:

"May this gentleman telephone for me, miss? My throat is in pretty bad shape, and I don't want to use it."

It was in bad shape, indeed. She could hardly hear him.

"But, I say, dear chap ——" remonstrated the fur-coated man, whose collar was so tight that he wiggled his head violently as if in search of comfort.

"This is as good a place as any," whispered the man in black impatiently. "Call 'em up! I say, miss, have you got any slippery elm or some kind of trochees good for laryngitis?"

She remembered afterward that when she said she would call the proprietor he kept her from it by engaging her in conversation, which likewise prevented her from trying to hear what his companion was saying.

The fur-coated man had called up Spring 3100, which is police headquarters.

"Are you there? I say, are you there? Yes, I know this is not London. You know Mr. Pierce and Mr. Storrs and Mr. Boon and Mr. Gaylord? Well, tell your men they are in a residence on Fifth Avenue, in the servants' dining room. It's Colonel Walton's house. Right-O! That's not your business. Go to the devil!"

He came out of the booth with an angry face.

"Confound their impudence! Where is my friend?"

"He's gone," said the cashier. "Here—come back and pay for that call; five cents!"

The telephone clerk at police headquarters promptly told the news of the whereabouts of the missing jewelers—for whom the star men had been searching six hours diligently and secretly—and then tried, through the telephone Central, to get in touch with the pay station from which the "tip" had come, but couldn't, as they would not answer. The reason Ayres' drug store wouldn't answer was that the Englishman in his ignorance had disarranged the connection without betraying that fact, showing a technical knowledge of telephones and their construction.

The news was kept from the newspapers, in the first place, because the jewelers requested it of the Police Department; and, secondly, because it was deemed wise by the sleuths to fight mystery with mystery. As a matter of fact, the detectives were confident of apprehending the miscreants shortly—for had they not left a trail as broad as Fifth Avenue?

The jewelers went back on their words to the colonel, who saved their lives. From their descriptions and the information given by Ayres and the fair cashier, they knew the husky-voiced man with the scar on the back of his hand must be Whispering Willie, a clever all-round crook. The Englishman, they thought, was an amateur. The police communicated with the Ruritania by wireless, and asked the purser if among the passengers were a man of middle height, smooth-shaven, about forty years of age, with paralyzed vocal cords that made him talk as if he had acute laryngitis, and a tall, well-built, blue-eyed, blond Englishman with a nervous affliction of the neck like a mild form of St. Vitus' Dance. Within twenty-four hours the purser had sent the reply: "St. Vitus here, under name of Lewis J. Wright. No trace of Laryngitis."

"Ah, the Girard! That's different."

"JUST *why* is it different? And *how?*" Because it is made in the only sensible and *natural* way. And it combines full flavor with mildness, *in the same cigar.*

You know how hard it is to find a rich and satisfying cigar that does not get "on your nerves"; or a mild cigar that has any real taste and flavor. Every smoker is up against that conundrum. And this is the answer, the

GIRARD Cigar

Here is a real Havana smoke, with all the full-bodied richness you find only in *Cuban-grown* tobacco; yet free from the slightest trace of rankness; and as harmless as it is delightful.

The ***Girard*** cigar is entirely hand-made. The filler is choice Havana leaf imported by us—and nothing else. We season this pure unflavored leaf slowly and completely, without artificial "sweating;" so that we retain all the original tropic quality and fragrance. And we blend this perfectly matured tobacco by a method solely our own; which insures a cigar uniformly mellow and satisfying.

It is sold by dealers at 10 cents straight. Made in all the regular colors and three standard shapes:

"Brokers" 5¼-inch Perfecto.
"Mariners" 5⅝-inch Panatella.
"Founders" 5-inch Blunt.

Buy them of your dealer. *We do not carry on a mail-order business.* You can probably buy the ***Girard*** cigar where you usually trade. But if you have any trouble in getting the shape and color you want, write us your dealer's name; enclose a dollar; and we will send you a box of ten ***Girard*** cigars *on trial*, or you can send $5 for a box of fifty cigars. If you are not entirely satisfied, we return your money.

We send you this sample-box only for your convenience. And we want your dealer's name, so that we can arrange to have him or *some* dealer supply you regularly in future.

If it means anything to you to discover a cigar that you will enjoy thoroughly *every time*, then write us *today*.

Why is the soda cracker to-day such a universal food?

People ate soda crackers in the old days, it is true—but they bought them from a barrel or box and took them home in a paper bag, their crispness and flavor all gone.

Uneeda Biscuit—soda crackers better than any ever made before—made in the greatest bakeries in the world—baked to perfection—packed to perfection—kept to perfection until you take them, oven-fresh and crisp, from their protecting package. Five cents.

NATIONAL BISCUIT COMPANY

So headquarters cabled to Scotland Yard to hold the tall blond afflicted with St. Vitus' Dance, who was thought to have sailed under the name of Lewis J. Wright, until the detective sergeant and one of the jeweler's clerks could arrive with extradition papers. And that's how Mr. L. J. Wright was arrested in Liverpool, less on account of New York's request than by reason of the absurd yarn he told. There was no such Dr. Cephas W. Atterbury as Wright declared he was going to see. The letter of introduction to the doctor, moreover, was a blank sheet of paper. The New York police learned about W. W. Lovell in this way and knew they were on the right trail.

Ten days later there was arrested in Paris, at the office of the American Express Company, a man answering the description of Whispering Willie, who had presented some checks signed by W. W. Lowry. The Paris police reported that W. W. Lowry was probably one of a band, because the scar on his hand vanished when washed with alcohol. And his voice grew normal when questioned by the prefect of police. He told an absurd story of having been hired at the rate of one thousand dollars a week to ask in a whisper for eleven letters at the American Express Company's office on February eleventh, at eleven-eleven A. M., and declared that when his employer bade him goodby on the steamer he painted a scar on the back of his hand and told him always to wear black gloves. The employer answered the description of Whispering Willie and also of W. W. Lovell. The police found that the whisperer's trail led a second time to the Herald office. The clerk, Carroll, remembered the mysterious advertiser very well indeed. Messrs. Reese & Silliman, real-estate agents, told the police they had rented Colonel Walton's house for the winter to a Mr. J. C. Atkinson, an Englishman who had given as references a firm of international bankers on whom his letter of credit for five thousand pounds was drawn. The bankers knew nothing about him personally or socially. Mr. Atkinson had drawn the entire five thousand pounds. He had occupied the house two months, paid his rent promptly and had given a satisfactory deposit against possible damage happening to any of the furniture.

The police had lost four weeks of valuable time in following clews that merely led back to the St. Iago Building and to the man with the paralyzed vocal cords and the scar on the back of his hand, calling himself W. W. Lovell, who was probably William W. Long, alias William W. Longworth, alias W. W. Latshay, alias Whispering Willie. The Englishman was not known to any member of the New York police force, but fortunately he had a nervous affliction which would betray him without recourse to the third degree.

Exactly one month after the departure of the real Duke of Connaught from New York, Messrs. Jesse L. Boon, Percival Pierce, J. Sumner Storrs and Wilfred Gaylord each received a copy of the following letter, typewritten on note paper of the Ritz-Carlton:

Having disposed of the pearls of the Princess Patricia at a price only eight per cent below what you offered them for to H. R. H. the Duke of Connaught, we beg to suggest that it is a waste of money for you to encourage the detectives and downright dishonesty for the detectives to encourage you. You have caused to be arrested unfortunate men suffering from chorea in Liverpool, Bremen, Genoa, Buenos Ayres and Panama, as well as Mr. W. W. Lowry in Paris and W. W. Longman in the City of Mexico. For the last eleven months Whispering Willie has been in the Missouri State Penitentiary, where he is Number 317. Our Colonel Louther has not St. Vitus' Dance, is not an Englishman and has not left New York! The Duke of Connaught, otherwise W. W. Lovell, of the Acme Vibrator Company, has no scar on the back of his right hand, is too young to have gray hair, and his nose is not what it was when he was known as Mr. Lovell. We needed time to move unwatched in New York, hence the elaborate false clews. We always plan our deals carefully and we are uniformly successful. We may inform you, in self-defense, that we operate only on the rich enemies of society. Pearls and diamonds have ruined as many women as drink has ruined men or Wall Street has destroyed souls! You may be interested to know that we propose to induce one of our most famous high financiers to contribute a couple of millions to our surplus this month. At the proper time we shall supply the name and the particulars, in order that you may compare notes with the other patrons of

Yours truly,

BLUE BLOOD AND PIRATES

(Continued from Page 11)

…t down behind the taffrail and blazed …way with rifle and Gatling gun. We …mmered away at the decks of both junks …they came crawling up on us at the ends …that hawser. How the yellow dogs did …wl when the first blast of the Gats came …er their rail! They ducked below, wait…ig to get even when the junks should be …d alongside the Star of Chile. The Gats …dn't stop 'em from coming on—not for a …inute, for all that we dropped the men …ke dead flies round the windlasses. There …as always more to take their places. It …asn't a pleasant sight to see them two …nks coming on, steady and easy, with the …irates blazing away at us with their old …orse-pistols and blunderbusses; and we …new that if they ever got alongside, the …tar of Chile was headed for the port of …issing ships, and Three-Fingered Jack—I …ad four fingers in them days—wouldn't be …ere tonight selling liquor and telling you …bout it.

Pretty soon I missed the old man on …eck, but in a minute or two he came up, …rrying a case of dynamite in his arms. …im and the carpenter had bored a hole …rough the top of the case, stuck in a …lminating cap and led a fuse to it through …e hole in the box. Also, they'd jammed four-foot section of half-inch brass cylinder …wn through the hole, and the fuse led up …rough this brass cylinder and burned free …the water, when the old man walked to …e stern railing and threw the box out as …r as he could. There was a hundred sticks …dynamite in the case and it floated …ndily. The strong flood tide swept it …way from us and it bore down on the port …nk, which was less than forty fathoms …way. We watched it bobbing along until …disappeared under the arch of her stern, …hen it exploded.

The force of that explosion lifted us all …ff our feet and I've been a trifle deef ever …nce. The Star of Chile shook like a wet …g and the air was just filled with pieces …f junk and Chinamen. There was a water…pout a hundred feet tall, and half a minute …fter the explosion the tail end of that …aterspout came down on our decks and …early drowned us at the guns. We saw …hat junk rise in the air for a split second …nd when the water settled she wasn't there …ny more!

"Well," says Tod Beasley, spitting the …alt water out of his mouth, "we've freed …ne end of that hawser anyhow. Number …wo junk can't haul herself in on it any …nore; so take the wheel, one of you men, …nd let's move along out of this piratical …oulash."

The minute we were under way the old …nan went down on the main deck forward …with a length of marline, tied Captain …oster hand and foot and left him lying in …he scuppers. Then we wore ship and …ame about until we had the long six pointed …t the disabled junk. We put thirty-two …ound shot through her before she sank; …nd then we sailed away for the West Coast …eaving the pirates to Joss and the sharks. We were glad to get away, for there had …been a fair collection of stinkpots aboard …the junk that was blown up and the fumes …that hung over the ocean in the immediate …neighborhood had made us deathly sick. …Savvy stinkpot—eh? We feared 'em worse …than we did the horse-pistols and blunder…busses, because if a pirate could chuck a …stinkpot aboard a vessel and it broke on …her decks the fumes would suffocate the …crew in that part of the vessel.

The entire row hadn't occupied more …than an hour; and no sooner had number …two junk gone down and the brig was …bowling along on her course again than the …old man went down on the main deck to …see his passenger, who had just come to. …Tod Beasley untied his hands and Captain …Foster wiped the blood out of his eyes and …glared at us all. Without a word Tod …Beasley reached down, grabbed Foster by …the nape of the neck and, big man though …he was, slammed him up against the front …of the house.

"Pipe all hands to muster," he ordered, …"and let them have a look at this man!"

The bo's'n piped all hands to muster ex…cept the helmsman and four men who had …been shot in the fight, and they all stood …round looking at our old man and his …passenger.

"Men," said Tod Beasley, "this man …says his name is Captain Foster and he is …my guest on this ship. He came aboard …at dusk last night and went to his state…room, saying he had a bad headache; and …to my knowledge he hasn't been on deck. …Yet he must have been on deck last night, …for the long gun and the howitzers were …spiked; and, judging by the pretty manner …in which you all behaved during the late …festivities, I will not insult any man of my …crew by suspecting him of this dirty trick. …Moreover, the first mate and I both saw …him signal those junks so they wouldn't …mistake him for one of the crew and take …a shot at him. It isn't so confounded hot …that a man must wipe his head with a red …handkerchief three times to port and three …times to starboard. He was telling them …that the guns were safe and to haul away. …Now then, a month's extra wages to the …man that tells me who this fellow is."

The crew crowded up and took a look …at the prisoner. Suddenly one of them, a …half-breed Maori boy, let out a yell and …made for Captain Foster with his cutlass. …Tod Beasley hit the Maori boy a back…handed slap across the mouth that sent …him spinning six feet.

"I'm in command here," says Tod very …pleasantly, "and I didn't ask you to execute …him. If you know who this scoundrel is say …so, but leave the killing of a white man to …white men."

"Him very bad man," sobbed the Maori …boy, coming back and struggling with the …old man to get at the prisoner. "Him kill …my father! That man name Captain Tom …Devine—and him kill my father."

"And who the devil, may I ask," said …Tod Beasley, "was your father?"

"Jock Wilson," says the Maori boy, …making a jab with his cutlass at our …passenger.

Tod Beasley motioned me to take the …cutlass away from the Maori, and I did it. …The old man was a trifle pale and I thought …his hand shook a little as he walked up to …the prisoner, lifted the black hair from …behind the man's right ear and felt with …his finger.

"Yes," says he very quietly, "it's Tom …Devine." He reached down with his knife …and slashed the rope at Devine's ankles. …"Stand up, Tom, you hound, and look a …man in the eyes!"

Tom Devine dropped his lower lip in a …snarl, but he couldn't meet Tod Beasley's …eyes. He shifted his glance to the half-breed …boy instead and lunged out to hit him. Tod …Beasley struck him a pleasant smack on the …nose with his big fist and the pirate settled …back against the house again.

"Well, Tom," says Tod Beasley, "have …you anything to say?"

"I have not," says Devine, flushing red …in spite of his hard nature; "and if I did …it's too late to say it, Tod. I know the …breed."

"You've changed a lot, Tom," says our …old man. "I hadn't the least suspicion it …was you."

"Parallel case here," says Tom Devine. …"If I'd known I never would have dickered …with Wong Chu for the swag below. He …put me up to it—the cunning beggar! …Those were his junks and their crews drew …pay from Wong Chu."

"They'll draw no more," says Tod Beasley …grimly; "and as for our friend Wong Chu, …I'm coming back to Amoy and I'll settle …with him; but first I must settle with you. …Perhaps it might interest you, Tom, to …know that in five minutes you'll hang from …the stuns'l boom."

Tom Devine threw back his head and …tried to laugh, but he made a horrible …failure of it.

"Hang, and be damned to you, Tod!" …says he.

"Ain't you the cheerful soul!" says Tod …Beasley, very sarcastic, though his voice …was trembling like a girl's. "I like to hear …a man talk like that when he's in your fix. …Nevertheless, I'll bet you're still a coward …at heart. You always were. You'll wilt at …the finish and howl like a whipped dog. …We've all heard of you, Tom, but none of …them know you like I do. You've been …quite a case, you have, Tom. I suppose it …would be cleaner and easier to drop you …over the side, but you were never that kind …to your victims. The law says that a pirate …must hang—and hang you shall! In the …old days a pirate made his prisoners walk a …plank, but you butchered them like you …were a Malay instead of a white man; so …it's hanging for you. Lay aloft, one of you …men, and fasten a double block to the end

The Lightest, Practical Rim Made

It Is Not Enough to Specify Demountable Rims For Your New Car—Insist Upon

"Firestone"

Quick Detachable

Demountable Rims

Built from the Tiremaker's Standpoint and Experience

Look into the past records of demountable rims; see how long any one of them has withstood the test of time; find out from users which one is most practical and dependable in ***actual service.***

We have no doubt as to your decision. Other rims have come and gone, while the Firestone has steadily gained in leadership. You will choose the Firestone—

Because the Firestone rim has a ***continuous*** bearing-support all around the wheel. The Firestone rim has no wedges placed here and there to force it out of round.

Because the Firestone rim has a "no-split" or unbroken base that makes it water-tight—keeps moisture from working through and decaying the tire.

Because the design of the Firestone rim does away with all complications and delicate adjustments, absolutely preventing rusting together of parts, ensuring reliability and ease of operation, and requiring no special tool to operate.

Because the Firestone quick detachable feature enables you to change inner tubes when rim is ***on*** the wheel as well as ***off*** of it. Think what that means when overtaken by repeated punctures.

Because several years of success have refined Firestone rims to the lightest weight consistent with safety and practicability.

Costs More—Worth It

BECAUSE Occident is made exclusively from the most expensive hard wheat grown. Less than one tenth of the wheat raised in the United States could pass Occident inspection.

Because more costly and thorough purifying and testing processes are used in the Occident Mills than in any other mills in the world.

Because Occident makes more and better bread,—light, tender, deliciously flavored loaves.

Because it makes white, flaky biscuits, cakes and pastry,—the kind you like best.

Because it lends sureness to your baking. No "bad luck" baking days with Occident.

This is why Occident is worth the slight extra cost.

OCCIDENT

The Guaranteed FLOUR

Ask your grocer to explain the Money-back Guarantee on which every bag, barrel and sack of Occident Flour is sold.

We do more than *promise* purity and excellence.

We *guarantee* that you will notice the difference and prove the *superior* baking quality of Occident Flour with the first bag.

Or your money is returned.

We want you to try Occident Flour —entirely at our risk.

Write for our little booklet "Better Baking"—for North—East—West—South—Mailed on request.

Russell-Miller Milling Company
Minneapolis U. S. A.

HIGHEST speed, heaviest "smash," nearest-to-straight-line path—you can aim and hit surely, and deal a blow that counts, with

US AMMUNITION

Other Cartridges contain fulminate of mercury and ground glass. When these escape into the barrel their destructive effect on the delicate boring is like that of corroding acid. U. S. Cartridges contain neither mercury nor glass. At the touch of the firing pin upon the primer, a hot, quick, "fat" flame explodes the evenly distributed powder and drives out the bullet, with the speed and force of Jove's thunderbolt.

For these reasons, U. S. Cartridges have taken first place in U. S. Army Tests more often than any other brand and demonstrated to the Government the necessity of abandoning old-fashioned ground glass and mercury primer. They are manufactured with such absolute accuracy in power supply and projectile weight that they command the perfect confidence of users under the most trying conditions. Ask a U. S. Ordnance Officer or any other expert.

US CARTRIDGE CO. Dept. S, Lowell, Mass.

Makers of THE BLACK SHELLS

of that stuns'l boom—and lead an inch rope through it."

The order was obeyed; and in five minutes Tom Devine stood under the rope's end; and Jock Wilson's half-breed Maori son made the hangman's knot and drew it taut under the pirate's right ear.

Tod Beasley walked up and stood in front of Tom Devine, looking at him for all the world as if the pirate was an animal in captivity. For quite a while he looked him over; and then, as he started away, Tom Devine fell on his knees, groveling at Tod Beasley's feet.

"I wish you wouldn't beg and plead, Tom," said the old man; "it only makes it harder all round. You've got to swing. There ain't no getting round that point; so remember the blood you sprang from and die game. You're white. Don't whimper like a coolie, you coward! And don't ask mercy of me. Did you have any mercy on the master of the Hebe and were you gentle to that missionary's girl that was aboard the Stormy Petrel? No, you wasn't; so let go my knees and swing off like a gentleman, even if you ain't one."

He shoved the pirate away from him, turned and walked away.

"I'm going below," says he very quietly, "and I won't come on deck again until I shoot the sun at noon. That leaves you half an hour to clean up decks. You will attend to this matter for me and favor me to the extent of not referring to it again."

He went below and we hanged Tom Devine as neat as you please. Twenty minutes later the half-breed Maori cut him down and two of the crew carried him to the rail. With a splash the body dropped into the China Sea and the Star of Chile went rolling home as gay as a girl to a wedding.

I had the decks washed up and everything put shipshape, and when that was over it was long past the noon hour and the old man had clean forgot to shoot the sun. I knew he would; so I shot it myself, worked out our position, told the steward to serve a glass of grog to all hands and went below to report to the old man. As I entered his cabin he was crying—big sobs that would have wrung the heart of a graven image.

"Oh, Tom! Tom, my boy!" he was saying as I came to the door. "Why couldn't that job have been left to somebody else!"

I stood there in the doorway, so surprised that I didn't have manners enough to back away and leave him to his own troubles. He cried a lot and called on God to witness that he had to do it; and then he said something about his mother and that the blood was clean again, and that he would have done the same by any other pirate. I got the whole story squared round in my thick head an hour later, when I knocked at his cabin door and found him looking at an old daguerreotype of two pudgy little boys, with black hair and eyes and wide, old-fashioned, white sailor collars, and tassels on their little boots.

Well, sir, the knowledge took me fair under the fifth rib. I handed him a slip of paper with the ship's position worked out on it and backed out of that man's cabin with a bigger lump in my throat than ever I was born with. Well! That big, long, sad, hard Puritan face—and the suffering of the man! I was for quitting him the minute we dropped anchor in Callao, but he wouldn't listen to it. And, as I said before, he was that fine a man I didn't have the heart to oppose him.

. . . . . .

"But what had he done to make him feel so badly?" I asked.

"Just hanged his twin brother!" said Three-Fingered Jack. "Tom Beasley was that pirate's real name. When the skipper felt back of his ear that time he was feeling for an old scar that he'd given Tom in one of their boyish fights. They hadn't met in twenty-five years or more; but when they did Tod Beasley did his duty as he saw it—and it takes a man to do that. He was a little proud of the Beasley blood and he could never hold up his head after Tom turned bad. It hurt him a lot.

"Yes, sir; this is a mighty small world after all and some queer things do happen in it once in a while. I guess it's my treat, boys. Same thing? . . . No, no, lad; you can't get a cocktail in this house. . . . No mixed drinks after six o'clock. . . . All set? Then I'll propose a little toast:

"Here's to Tod Beasley that's dead and gone! He washed his own dirty linen."

"THE PRINCE"

With these new, comfortable **Dr. A. Reed Cushion Low Shoes** you have unfretted feet in the summer. And feet without a fret mean body and brain comfort. The cushion is a part of the sole—it isn't added to it, doesn't make bulk. Light as a feather and as downy—the cushion forms a natural bed for your foot. A non-conductor of heat—your feet are at an even temperature there.

Dr. A. Reed Cushion Shoe

TRADE MARK

Wear a pair of these Oxfords and save yourself summer discomfort and weariness. They have style, shape and grace—and the added blessing you cannot get in any other shoes, perfect comfort at all times, with no "breaking in."

If your dealer does not handle Dr. A. Reed Cushion Shoes, write us for our Free Style Book. It will also tell you where to get the shoes you want.

The genuine are identified by the name of the makers woven in the pull strap.

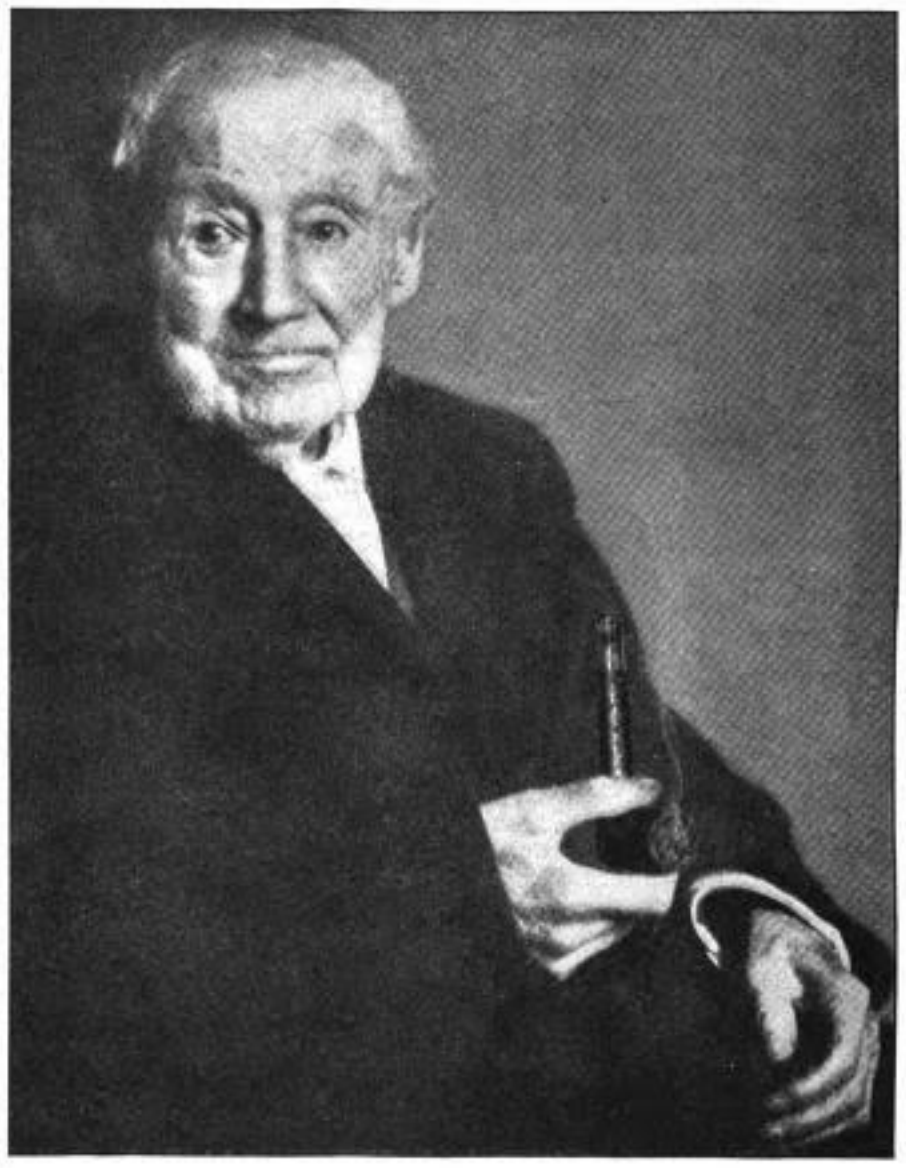
TRUST FALLACIES DISPELLED

(Continued from Page 4)

"More than that, combination has not materially developed the capacity of production in the industrial world any more than it has the extension of transportation facilities in the transportation world, since the era of great combination began. Though, of course, there has been some extension of transportation facilities, yet combination has exerted itself more in the absorption of the agencies already existing than in extending new lines of transportation. The same is true in the industrial world. Since the era of great combination, this so-called dynamic force has spent its energies more in the consolidation and absorption of existing agencies than in the establishment of new. Though there has been some growth, the great fact remains that the instrumentalities of America's vast and almost inconceivable transportation and industrial activities were in the main the products of smaller units.

"The real dynamic force thus sought to be interfered with by the Sherman Anti-Trust Law is that force which finds its outlet in seeking high-finance exploitation and the stifling of competition.

"We are constantly reminded, with a precision of assertion, that we must recognize the great combinations or return to what is termed 'ruinous' or 'disastrous' competition. Every suggestion of competition is coupled with the assertion that competition always was and necessarily must be ruinous; in fact, nearly every time the word 'competition' is used it is prefaced with the word 'ruinous,' making a compound word with a special emphasis on the 'ruinous.' Of course there may be methods or practices employed which are ruinous to those against whom they are employed. Such methods and practices are calculated to suppress—not develop or keep alive—competition. On the other hand, the desire for profit will, as a rule, protect competition from becoming ruinous, as far as mere margin or loss of profit is concerned.



"Again, it is a matter of common knowledge that, in the case of some of the larger combinations, such great aggregations of capital were largely inspired by men who were outside the particular industry until the combination was consummated."

The Results of Competition

"It is manifest that in dealing with this subject it would hardly be proper for me to use any particular combinations as illustrations, especially as some are now the subject of Governmental challenge; but, pursuing the line of my observations in regard to the effect of the elimination of competition as a factor in lessening the dynamic force, we have this state of facts:

"Small units, under the inspiration of competition, developed the separate agencies of production. Now, calling attention to the great combinations which were formed to absorb the agencies already existing, and which had been created by the smaller units of capital, it will occur to the unbiased mind that, in the case of such combinations which have most attracted public attention, great fortunes were already the result of such independent agencies before the present combinations resulted—fortunes that were hardly compatible with the idea of ruinous competition among the smaller units. Of course a certain percentage of failures attach to all forms of activity; but, taken as a whole, the success of those men who had established and were administering the affairs of the smaller units absorbed by the trusts absolutely negatives the suggestion that there was then existing a general and continuous ruinous competition. Even the failures which came to the smaller units were the result of those periods of depression which harass the industrial world at intervals.

"It is within the knowledge of every one who has seen the growth of combinations that, prior to their formation, independent units had established the agencies of production; and that the men administering such units were, in the main, enjoying a fair degree of prosperity. This being true, it is proper to assume that, so far as competition can be maintained, instead of being ruinous *per se* and disastrous in

Anthony Redelberger has smoked a pipe for 86 years

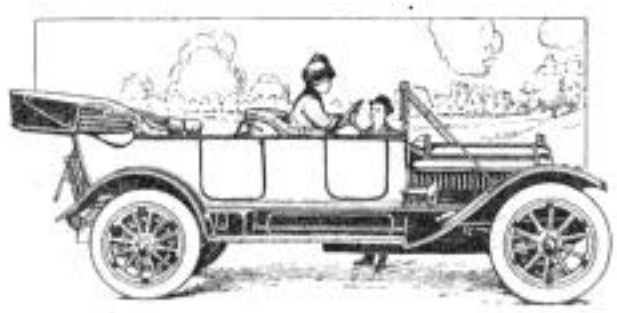
Anthony Redelberger will be 100 years old April 12th next. The photograph published above was taken a few days ago at his Pottsville, Pa., home. Mr. Redelberger enjoys good health, and—he smokes his pipe first thing in the morning and last thing at night.

Mr. Redelberger began smoking a pipe when he was 14 years old—in 1826—and he has smoked a pipe ever since—86 years. For a long time he has smoked Prince Albert because it gives him more enjoyment and solace than any other tobacco he has ever used.

PRINCE ALBERT

"the national joy smoke"

is just *the* tobacco for thousands and thousands of men; *it has the right* flavor; the *right* aroma; the *right* long-burning *qualities and it won't bite the tongue*, because *that bite* has been *removed by a* patented process.



Ask Mr. Redelberger what he found so different in "P. A."; ask men you meet every day why they are so fond of "P. A." *Know yourself* the wonderful qualities of this *real* pipe smoke! Give it every test you know—fair and unfair. *It just can't go wrong!*

Buy "P. A." anywhere in the tidy red 10c tins; 5c cloth bags, and in half-pound and pound humidor packages.

WHITE *Self-Starting* SIX

PRODUCED to meet the heretofore unfilled demand for a powerful Six that is both economical in operation and simple in construction and control.

The White Self-Starting Six presents a striking contrast to the conventional types of six-cylinder cars.

Absolutely the latest in every detail of body design, with lines unbroken by hinges and handles, the White Six incorporates the new and extremely convenient combination of the left-hand drive with a thoroughly practical and efficient electric starting and lighting system, making it possible, for the first time in motor car construction, to reach the driving seat, start, and light the car without the necessity of stepping into the street.

every case, it would follow the line of former activities. And there seems to be no ground for the oft-reiterated assertion that we are face to face with the alternative either of a continuation of the trust system or of a return to so-called 'ruinous,' 'destructive' competition; in fact, the terms 'trust system' and 'ruinous competition' are not antithetic terms, but rather in a broad sense synonymous; for the trust, so far as it has resulted in an elimination of competition, outside the direct absorption of competitors accomplished that elimination by ruinous or destructive competition.

"The trouble is that a discussion of the whole subject is obscured by a too general belief in the fallacies which I have discussed, and our first endeavor should be to clear them away. How far new legislation may be necessary to cope with the situation and how far competition can be restored are questions which, in view of the Interstate Commerce Committee's inquiry, I could not be expected to debate at this time. But that great combinations are essential to efficiency, or that they are demanded as a medium for the outlet of the dynamic force of the country, or that the only alternative is the trust system or 'ruinous competition'—these are the three major fallacies that ought to be challenged.

"If the trust hearings have the effect of dispelling these fallacies the time expended will be of incalculable value to the public; for no legislation could be economically and socially sound that rests upon a fallacy as the necessity for action by Congress."

. . . . . .

When the session's harvest of laws has been stored away in the statute-books, provided there is no call from Macedonia, Ohio, to come over and help in the speaking, Senator Clapp hies himself to his farm in Pine County, Minnesota, which is across the Snake River and borders on Lake Pokegama. The Senator calls it Wabeek, which is Indian for The Best Place; but his constituents call it The Black Eagle's Roost.

Opinions differ regarding the Senator's genius for farming. Some aver that he couldn't do worse if he had served on the Agricultural Committee. Others say that he occasionally digs up the potatoes to see how fast they are growing; others, that he keeps continually busy from very early morning—but that he appears to be "just puttering round, digging here and there." Senator Clapp smiles whenever he is confronted with these criticisms on his method, and makes reply:

"I devote a good deal of valuable time to uprooting fallacies. Some statesmen who are farmers for political effect believe in cover crops. I don't—never have—never shall! Farming is like lawmaking. If the fundamentals in the congressional field are all right then all you have to do is to plow and harrow, sow good, clean seed, and work early and late to keep out the tares. And if you do all that your crop is pretty certain to be Number One Northern Hard—but you must root up the fallacies!"

A true farmer is one who belongs to the land; an absentee agriculturist, one who imagines that the land and the fullness thereof belong to him. Senator Clapp belongs to the land!

Cornell's Comeback

IN 1897 President Benjamin Ide Wheeler, now of the University of California, was faculty representative of the Cornell navy. Cornell and Yale had had no rowing relations for twenty years, and through the efforts of Professor Wheeler a race was arranged.

When the crews of Harvard, Yale and Cornell met at Poughkeepsie in July of that year there was much rowing excitement, and a great crowd was present.

Wheeler was aboard the Cornell launch at the starting-line. Harvard and Cornell were ready, but Yale had not appeared. The Yale launch shot out and a man in it shouted: "Yale cannot be here for twenty minutes. Will you wait, Cornell?"

"We have waited twenty years to beat Yale," Wheeler replied, "and I guess we can wait twenty minutes longer," which in those days and at every Cornell banquet since has unanimously been considered a glittering example of the ready comeback, the quick-as-a-flash stuff, to say nothing of repartee. It is always produced just after the close-harmony boys at Table G have yanked the excelsior out of the Stein Song.

Smoke Talk No.

Don't smoke at all—

if smoking means rich, strong, oily cigars all the time. They'll sap your health—"drive" your heart, "jump" your nerves and affect your throat. But if you must smoke, remember: The only sensible smoke for any man is a light, domestic blend—

THE BUSINESS SIDE OF OPERA

(Continued from Page 21)

Tomorrow's opera demands consideration, and so does that for the evening after and the matinée following—to say nothing of the bill for the week to come. Further attention—and close attention too—is required in the preparation of a novelty which keeps every Metropolitan department moving, with senses alert; but that is not all. Usually there are four or five new operas to be produced every season; and while one is in rehearsal the next in order is being tuned up and prepared for public hearing.

Into this maëlstrom of musical endeavor now come the directors, the boxholders in the parterre and grand tiers, the other subscribers, and that part of the public which buys tickets for such performances as appeal to its whims. General Manager Gatti-Casazza has many people to please and considerably more than two varieties of tastes to think about.

If Madam Jewels dotes on Tosca, Miss High-and-Mighty cannot endure any Puccini music. And a soprano who causes one set of opera patrons to rave ecstatically is quite apt to be the innocent cause that sets the sensibilities of another faction aquiver. The manager's daily mail is laden with complaints and an occasional suggestion sometimes as long as a lawyer's brief. All these communications require a courteously worded reply.

Perhaps there has been some difficulty in obtaining desired seats at the box office, or a clash with one of the gentlemanly and patient ushers. And there is the bothersome individual who has a young friend worthy of a place among the principals. Again, some one writes frantically that a set of tickets has been lost or stolen, and begs that if they are presented at the door they shall be "taken up." The written—yes, and the telephoned—"kicks" are innumerable; but once in a while a bit of balm is provided in praise for some work genuinely merited.

Toscanini's Remarkable Memory

Twice a week the executive committee of the directorate—Otto H. Kahn, chairman; Clarence H. Mackay and Henry Rogers Winthrop—is supposed to meet with Mr. Gatti to go over necessary matters. The general manager has a free hand; yet he makes frequent reports despite the authority given him by the millionaires who have just engaged him and Conductor Toscanini for another three years following the season now nearing its end.

Mr. Gatti is a mild-mannered, suave gentleman who believes in harmonizing his subordinates. There is no friction permitted in any Metropolitan department. The chief executive moves deliberately, with light step and a quiet smile. He seldom scolds and rarely praises. His hobby is thoroughness, long working hours and results.

He has an efficient "side partner" in Maestro Toscanini, whose coöperation has done much to bring him the success that carried him up from the ranks to the post of boss of La Scala, in Milan, which place he exchanged for the bigger position in New York. Before turning to opera Manager Gatti was a naval engineer—and a good one.

Together, these men—Mr. Gatti and Mr. Toscanini—form a practically unbeatable combination. Mr. Gatti will accept no impresarioship without a contract engaging Mr. Toscanini as principal conductor; and as the latter is looked upon as the greatest all-round musical director of opera living it can be seen that there is method in such insistence. Each of these Italians receives a salary of $30,000 a year.

Arturo Toscanini is the conductor with the marvelous memory. This musician never leads with the aid of a score. He doesn't have to; for every note, rest and word in the music of the many operas he directs is firmly fixed in his mind. The extent of his memory may be better comprehended when it is understood that the pages of Tristan und Isolde, Die Meistersinger, The Girl of the Golden West, Falstaff, Otello, Tosca and Le Donne Curiose are some of the numerous operas he has learned. It is as surprising to contemplate

10 Shots Quick

AIMS EASY AS POINTING YOUR FINGER

Shuster
When in Peril
Had his Savage

DURING the latter part of his stay in Persia, when peril became actual, Mr. Shuster and other Americans of his party chose to equip themselves with 10-shot Savage Automatics. Mr. W. Morgan Shuster, staunch in his integrity as Treasurer-General of Persia, braved the wrath of Russia to the last hour of Persia's independence. For weeks an army of 4000 Cossack raiders and a horde of hired Bakhtian assassins menaced Mr. Shuster's life.

The Savage Automatic with its ten powerful shots is the greatest weapon ever invented for protection, either home or abroad. It aims easy as pointing your finger. Gets into action quick. Shoots only one shot each time you pull the trigger, yet all ten can be fired in three seconds. Reloads and recocks itself automatically.

Every property owner knows in the bottom of his heart that the unseen peril of the burglar may become a reality any night. He knows as well as Mr. Shuster knows, that if he has a Savage Automatic he is a match for any emergency, that even in his absence his wife and family are protected. That he has placed in his household the greatest weapon ever invented for protection—The Ten Shot Savage Automatic.

Send 6c in stamps for books telling just what to do if you wake up and find a burglar in your room—advice given by best authorities, taken from magazines, etc.

A 20-SHOT .22 REPEATER

Here is a .22 repeater that is different. It weighs less. It costs less. It uses cheaper, lighter ammunition. It needs less time for care and cleaning. But—it holds more cartridges—20 shots. It shoots better, for the .22 Short is deadly accurate in this barrel, which is specially rifled and chambered for it. It is stronger and more durable, because it has a simple, reliable military bolt action, built to stand wear and weather. Each rifle is tested, inspected, targeted and guaranteed. You know what SAVAGE quality means. Price only $6.50. Weight 4 pounds. 20-inch barrel. Ask for full information about the new Savage 1911 Repeater. Savage Arms Company, 73 Savage Avenue, Utica, New York.

MEAD CYCLE CO. **Dept. R-55** **CHICAGO, ILL.**

the ease with which he has memorized these scores as it is to see him actually on the firing line in the orchestra pit.

What Messrs. Gatti and Toscanini don't know about opera isn't worth knowing. They form an operatic team that has not been surpassed and one unlikely to be in this generation. These gentlemen are responsible for bringing to this country for the first time the celebrated dramatic soprano, Emmy Destinn, and that great artist among barytones, Pasquale Amato. They also engaged for next season Frieda Hempel, a distinguished *coloratura* soprano, now singing in the Berlin Royal Opera, and caused to be produced for the first time on any stage Puccini's The Girl of the Golden West.

The American premières of Humperdinck's Koenigskinder, Le Donne Curiose, Lobetanz and Versiegelt must be credited to Mr. Gatti, who also made such important revivals as Falstaff, Otello, Armide, and Orfeo ed Euridice. This enterprising and progressive manager likewise has caused to be designed and built new and improved scenery, wholly or in part, for Aida, Siegfried and other operas in the Metropolitan's répertoire.

The recent competition of American composers and librettists for the Metropolitan Opera Company's ten-thousand-dollar prize for the best opera produced by native talent—won by Dr. Horatio W. Parker and Mr. Brian Hooker with their Mona—was advocated by Mr. Gatti. He has had his failures and temporary setbacks too.

Germania, and some other novelties he was responsible for, did not meet critical or public approbation. One or two singers whom he has engaged have shown nothing beyond mediocre abilities, and now and again he gives a performance that does not hit the high-mark standard established by the Metropolitan.

However, one must make mistakes to succeed; and, as Mr. Gatti is only human, he takes on errors to which flesh is heir; but if he makes mistakes he also scores triumphs.

In the light of the account already given it is not remarkable that business should rule opera. "We are not in business to make money," said Mr. Otto H. Kahn just before his recent departure for Europe. "Our aim is an artistic one!"—which appears to be the truth, the whole truth and nothing but the truth.

How to Start a Coöperative Store

(Continued from Page 9)

exactly how much you have bought. You do not need to, however; for in giving you the slip the storekeeper writes down in his book "161—forty-seven cents," and makes the total himself. Your pink slip is merely a check—a means of verification.

All this seems easy, but it must not be forgotten meantime that there is plenty of hard work. Coöperation is a job—like other jobs. You may dream of the vast coöperative movement to which your store may give birth. You may picture a network of "coöps" in all the cities and towns and villages of the country. You may visualize these stores developing, expanding, experimenting in one line after another. You may dream of allied coöperative butcher shops, bakeries, millinery shops, clothing stores, coal depots. You may picture great wholesale coöperative stores, linking all these retail coöperatives into one vast, wonderful, ramified coöperative structure sprouting from your single store; but meanwhile you must tie up one-pound packages of coffee and must sweep the floor every morning. You may dream all you wish—and be better for it, but you may not dream during business hours.

Let us assume that your first three months are over and that your policy is to pay quarterly dividends. The first thing to do is to take an account of stock, marking off a reasonable amount for depreciation. Then the executive committee should appoint two of the coöperators to act as auditors, who will go over the books, examine the vouchers and, if necessary, compare the sales with the members' checks.

The net profits should then be calculated and distributed as follows: A certain proportion should be placed in the reserve

Barbour's Linen Thread has stood the test for 128 years and is recognized as the standard the world over. Be sure it's Barbour's and avoid cotton substitutes sold as "Linen Finish." Insist upon the genuine Barbour's Linen Thread.

BARBOUR'S F. D. A. CROCHET THREAD

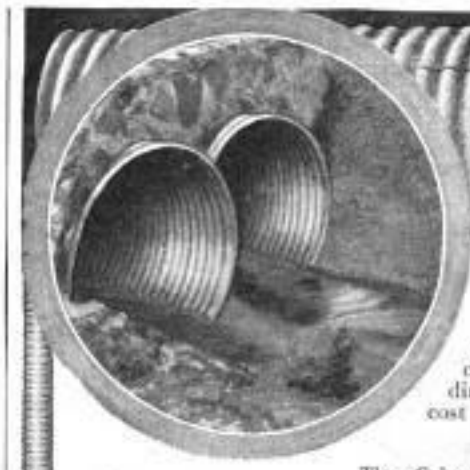
fund to provide for future contingencies. In good times the coöperative should prepare for bad. A certain sum should be laid aside to pay off the expenses of floating the society. Then the interest should be paid upon the capital. If two thousand dollars represents the capital and the rate of interest is six per cent a year then the interest charge for the quarter would be one and one-half per cent of two thousand dollars, or thirty dollars. A small sum should be laid aside for propaganda and educational purposes. To do this diminishes, of course, the dividend to members; but it pays in the long run. It increases your own membership and it increases the number of stores.

A coöperative store is more likely to succeed if other coöperatives are formed elsewhere, since the success of a large number of such stores hastens the time when they can unite their forces, give mutual aid and advice and buy jointly in wholesale coöperatives. For somewhat similar reasons, and because the coöperative movement has always had democratic and humanitarian impulses, a certain proportion of the earnings of the British stores has gone, in the shape of bonuses or dividends, to store employees.



Suppose after all these charges have been paid there remains a profit of three hundred and twenty dollars. The sales during the quarter are added and are found to amount to four thousand dollars. On the principle of dividends according to purchases the rate of dividend is calculated by dividing the total dividend by the total sales, as follows: $\$320 \div \$4000 = \frac{320}{4000} = 8$ per cent. At the quarterly meeting this dividend of eight per cent is announced and each member is credited with eight per cent on his purchases. Smith, who has bought ten dollars' worth, is credited with eighty cents; Brown, who has bought twenty dollars' worth, with one dollar and sixty cents; and Robinson, who has bought one hundred dollars' worth, with eight dollars. The member is permitted either to draw out this money or to add it to his capital account, upon which he draws a regular interest of six per cent.

Mistakes Some Stores Have Made

It is not to be assumed that the store will invariably earn eight per cent upon its business, though that is less than the average of all the British stores during a very long period. It is likely that costly errors will be made, especially in the beginning. It is always possible that the storekeeper may turn out to be inefficient or even dishonest, or he may be given too much leeway or be hampered too continually. Other mistakes may be made. Expenses may be too high for the business done; the purchases by the store may be excessive or unwise; the store policy may be too fluctuating; the members may be quarrelsome or unreasonable or may purchase at rival stores; there may be bad bookkeeping or stocktaking or waste behind the counter through careless weighing. Or there may be inattention or inefficiency on the part of the executive committee or of the members, with resulting losses and deficits.

To avoid such errors the utmost vigilance is necessary. The individual coöperator must be interested in his store. He must thoughtfully decide upon candidates for the executive committee. The store manager and all other employees should be carefully chosen for their honesty and capacity, with a clear understanding on all sides of their duties and rights. Members should work together amicably and the utmost impartiality should be observed toward all members in all the business of the store. There should be careful regulation of stock, and purchases should be made judiciously and for cash. Expenses should be kept down rigorously; surplus capital should be wisely invested, and a full and frank explanation of all important matters should be made by officials and employees at the regular members' meetings. All of these rules are self-evident, but it is the neglect of these very self-evident truths that is responsible for so many coöperative failures in the past.

Today the coöperative store is not an American institution. Tomorrow it may have become one. It can only become one by the union of a tempered enthusiasm and a knowledge of the causes of failure and success. It must be built—if it is to be built at all—upon the ground of mutual confidence, neighborliness, thrift, intelligence and other humble virtues.

Make Spring Floods Harmless

Heavy Spring floods are harmless if American Ingot Iron Corrugated Culverts are used. They will not wash out, crack or break in freshet time as other culverts do. Once installed, last a lifetime. Due to their corrugations, they are 29 times as strong as ordinary metal pipe of the same thickness. First cost low—maintenance nothing.

Durable Culverts

These Culverts are *not* made of steel, but *American Ingot Iron*—guaranteed *99.84% pure*. Steel, on account of its *impurities*, rusts and corrodes quickly. American Ingot Iron, due to its *purity*, resists rust for many years. This is why American Ingot Iron Culverts will outlast steel culverts many times over.

American Ingot Iron Culverts

(99.84% Pure Iron)

Leading railroads are displacing concrete, brick, tile and stone culverts with this staunch, durable and economical culvert. Frost will not harm this culvert. **Tell us your road troubles and plans—we will gladly send you expert advice.** Look for the triangle trademark on every section—it denotes the genuine American Ingot Iron Culvert.

Road builders, county officials and taxpayers will save time, money and labor by addressing the nearest manufacturer for full particulars. Write—right NOW.

A Pierce heating equipment is as safe an investment as a gilt-edge bond.

PIERCE MARK

It pays dividends—real money, money saved on fuel; money saved on repairs.

This saving is real. There is no saving in skimping on coal and shivering. A Pierce heating outfit will give you all the heat you need—steam or hot water—and still save fuel. It saves because a Pierce Boiler is so built that every heat unit in every chunk of coal is utilized, and because, with over 200 styles of boilers, it is possible to exactly meet the heat requirements of any house without waste.

We do not make installation—see your plumber or steamfitter for this—but we stand back of every Pierce outfit and guarantee satisfactory service. There are over 200,000 Pierce Boilers in successful operation today.

If you are undecided as to what kind of heat you should put in your house, write for our heat primer "What Heat for Your House?" If you want to know why you should insist on Pierce Boilers and Radiators, write for our booklet "Commonsense Heating." Either or both will be sent free on request to anyone who is interested.

Pierce Boilers and Radiators

"'TATERS"

(Continued from Page 15)

was no less than a call to arms in de- of freedom of speech in the land of ee and the home of the brave. The tent became a storm center of exple- and question marks; the air grew thick lying bits of potato, aimed at the top tent mostly, just to show how high m of speech could soar when she and every nice soft piece that stuck canvas brought forth howls of:

'taters—'taters—'taters—who says s?" Plop! "I do—there's my say!"

"Per-taters!" Plop! "Po-taters!"

"Po-ta-toes. Spell it, Roddy!" Plop!

n't say it"—Plop!—"because actions louder than words!" Plop!

th this the hilarity reached the point rmentation where fermenting spirits t to turn sour. All the boys were on feet but Roddy, who had sunk down his gun was snatched away; and he ally didn't get up again to join the cation at his expense. He sat off to ide on a bedroll and gloomed.

ddenly the words hurtled across the "It looks to me like they wuz only erson in this here outfit dassen't say s when Roddy's round!" All eyes ntly turned on Roddy, glooming —he was the one person who hadn't taters!

was a joke to appeal to that audience, eers of derision burst forth:

Why, Roddy! Dassen't you say s?" "Say it, Rod—'taters!" "Das- y', er can't y'?" "Go to it, Roddy— yer medicine like a little man! Say s!"

ddy went on glooming and the fer- ation soured fast.

Where does it hurt you, dearie?" d Hank Homans, taking off Miss Gil- screamingly. "Now, dear, po-tatoes. t."

athless silence. Roddy didn't budge. put his hand behind his ear and d toward Roddy.

little louder, darling," Hank en- ed. "Try again, sweetheart. Listen! o-po—t-t-t-ta—toes! Yer little toot- ootsies—toes, not ters. Don't be d; it's an easy word—po-ta-toes. toes—say it, precious love; just this to please mamma."

ddy never lifted his eyes—but can't just see him sitting there, glooming uming!

Baby can't say it—he's lost his little ue!" announced Hank solemnly.

Open yer mouth, Rod, an' lemme see if v any!" demanded Kinky.

ddy's scowl was greeted with yells of: Open yer mouth!" "Lemme see yer ue—if y' got any!" "Go to it, Roddy; yer tongue like a good boy when ma tells y' to!"

ddy disdained even the reply of a look; all at once the fermentation turned to ar. A man who gives forth a fiat like to a crowd—and they'd taken it per- ly, every one of them—and then re- to take his medicine, needs a doctor; he's bound to find one at a round-up. y told him: "Rod, I guess you need a r now fer what ails you." And his s were hardly out when "Make him!" rified friends and foes alike.

Make him swally a hunk!" hissed the ual victim of the fiat; and he was ed with the snarly "Yes!" of those e exasperation was ready for quick n.

ddy sprang to his feet.

You dare!" he cried furiously. "You ter make me swally a 'tater! You t' put yer hands on me!"

Roddy had had his gun at that mo- , Kinky told me, "there'd have been us fellas livin' with the daisies!" And k it was very likely so, for Roddy was e himself—he'd have aimed for kill- but the boys were pretty thoroughly d too. It wasn't only the outrage he ut upon free speech in a free land—it more than anything, the way he'd d up" afterward. If there's anything boy hates it's a fellow who "acts up" king medicine when he has offended st the prevailing civilization.

Why, he jest natchelly had to be doc- !" explained Kinky to me simply; h meant that the crowd was going to Roddy a target for potatoes—plaster up and force him to swallow a platter- This would be resisted by Roddy and iends, and the affair was bound to end in bloodshed. And they were in the very act of starting the doctoring when the camp cook bounced into the grub-tent with a shout:

"Here, you young rapscallions—quit it! Them's new pertaters, an' pertaters costs money! You throw one more chunk"—he threatened Kinky with his long spoon, just out of the gravy in the stew-kettle—"you jest throw one little scrap anywheres but down yer throat an' I cook no more fer this here ungrateful outfit! I quit cookin' alto- gether fer y' right now—an' y' can git yer own supper!"

Awful threat! In two blinks order was restored. Kinky gracefully swallowed the piece he was aiming at Roddy's head and the example was ostentatiously imitated by friends and foes; for it is a dreadful re- sponsibility—one that no sane man will assume—to deprive an outfit of its cook. But that cook! The man that did it might as well say "Lynch me, please!" and snuff out gallantly.

The victory in saying potatoes was obvi- ously with the cook, which everybody im- mediately granted as the most graceful way out of the affair; and yet it somehow left Roddy in possession of the field, though he hadn't won the day; they hadn't made him "eat his words," and the very amiability of his silence flaunted it at them that they couldn't do it anyway. Perhaps not.

The episode hung in the atmosphere like a charged cloud; and when the cattle came back from the round-up to the home ranches, and the cowboys with them, the slumber- ing belligerency of the whole community awoke—which shows how dangerous it is to play with loaded jokes that are liable to go off any time. 'Taters, a joke, had been a mere challenge to tell where you stood in the scale of cherishings: 'taters as the For- bidden Word became a moral dare to all your courage and defiance.

The funny thing was how everybody exhibited the symptoms the same way: first, the round-up yarn would be recounted in detail; and then: "So you can't say 'taters any more in this state—you can't say it! You can't say it!"—as if you couldn't even mouth it to the naked breezes!

And instantly a very devil possessed everybody to say it! You just had to say it to show you could, any time and any place you darn pleased—so there! The minute anybody said 'taters to you another devil-spirit moved you to retort: "You can't say that word to me!" I did it once myself to a sheepherder—I detested the man anyway—when he yelled: "Well, you betcha I can say 'taters—say it all I wanta; an' they ain't nobody to stop me!" I barked back at him, "You can't say that word to me!" and stared him out of countenance; so he got up and left the room.

* * * * * * *

About a week after the round-up civil war seemed imminent. Old McQueed was re- ported as "wearing his gun to bed," and Roddy as carrying two; and the moment this got about everybody over three hun- dred square miles of sagebrush began dar- ing everybody else to "say 'taters to a McQueed"—that representing the acme of danger in the state at the time, not count- ing the tame Yellowstone Park bears. And if you didn't take up the dare—Pooh-pooh! Just as lief as not!—why, there you were, a 'fraid cat, in glorious, bold Wyoming! Nobody likes to be called a 'fraid cat, even for not walking up to instant death at the movable parts of a grizzly or a gun.

All this while little Geraldine went on with her work as quietly as though she were not the arbiter of our destiny; and Jim went bravely to his desk each morning and watched with anguished eyes until the clock said five minutes of closing-time and Miss Geraldine said: "Po-tatoes. Spell it, Jim!" He gulped the potato that came into his throat at ten minutes of and an- swered, "'T-a-t-e-r-s!" and sat down. Then he gulped two more potatoes unexpectedly in his throat before he could tell her why he spelled it with a t; and afterward he heard her "Oh, very well!" through a mashed-potato fog.

Little Gilbert's voice grew softer and sweeter and her smile softer and sweeter as the days passed; and she meant them to when she spoke to Jim, for she grew sorrier and sorrier for him all the time. She read his young heart to its innermost workings easier than she read her dictionary, and she knew how he hated her and how he—loved

Wash the street dust out of your pores

Many ills are spread by the dust.

A healthy skin will protect you against chance infection from street dust, car straps, money—many such risks you run every day.

The slight carbolated solution makes Lifebuoy antiseptic. The cocoanut and natural red palm oils, combined with this solution, clear and beautify the skin, *and make it healthy.*

You can feel the refreshing effect of Lifebuoy Soap on your skin—and the skin soon shows it.

Wonderfully soothing for chafed or tender skins. Lifebuoy is for babies, children and grown people.

After using, only a fresh, clean odor remains.

LIFEBUOY
HEALTH SOAP
For toilet, bath and shampoo.

5c Ask your druggist or grocer for it. If he hasn't it, send 5 cents in stamps or coin for full size cake, to LEVER BROS. CO., Dept. 8, Cambridge, MASS.

HOMESEEKERS
You can raise corn, cane, cotton, upland rice, fodder crops, fruits and vegetables, cattle, sheep and hogs in the Suwanee River Valley, Florida, at the lowest possible cost and with the greatest pos- sible profit. LA FRANCE SHOE FOR WOMEN

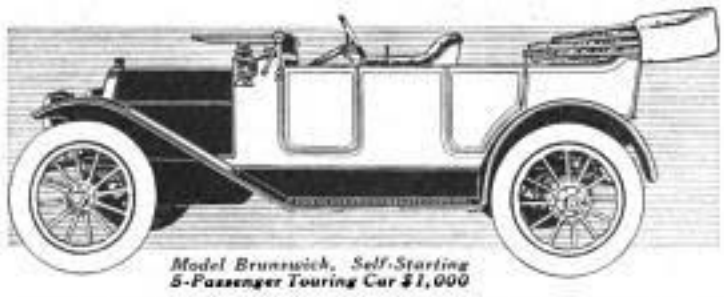
6284
Gun Metal
Russia Calf
Patent Colt

A BECOMING Spring hat is all the more fetching if the footwear, too, is unmistakably elegant. A harmony in these conspicuous points of attire goes far towards giving one the comfortable assurance of being well dressed. La France Shoes especially confer that note of distinction so much coveted by particular people.



In this season's La France Shoes we offer models which bear the stamp of approval of society leaders at Lakewood, Aiken, Pinehurst and other fashionable resorts. The Shoe here shown, suitable for afternoon "at home," matinees, etc., comes in *white* Nu-Buck, dull gun metal, tan Russia calf, patent colt or the exquisite silk and satin fabrics.

We offer in addition a wide variety of oxfords and boots, for shopping and exacting every-day wear, in all leathers and lasts.

All are shown in our beautiful Spring catalogue, sent free upon request.

WILLIAMS, CLARK & COMPANY
377 Washington Street Lynn, Massachusetts

The PAIGE Car
Sells For What It Is Worth

Model Brunswick, Self-Starting
5-Passenger Touring Car $1,000

Paige cars sell for just what they are worth—not a single dollar more and frankly—not any less. We don't claim them to be $2,000 or $2,500 cars. If they were we could not sell them for $975 and $1,000 and remain long in business.

Nor could any other manufacturer!

The Paige is not a $2,000 car. It is the best automobile you can buy anywhere for its price. A well designed, well constructed car—comfortable, efficient and enduring. Built by an organization of the most experienced and reputable executives, behind whom is a directorate comprised of some of America's biggest business men who are responsible to every Paige owner for their product.

See the Paige Car—examine it in *every detail* of construction. Compare it with other cars selling at Paige prices—or more. Ride in it—test its power, speed and easy riding qualities. Note the efficiency of the **Self-Starter**—the sure, smooth engagement of the **Multiple Disc Cork Insert Clutch**—the positiveness and simplicity of the **Delco Ignition**, and many other features not found on any other car in the Paige price field.

Six snappy, stylish body types—all built on the one Paige Chassis and with the one Paige unit power plant. Prices, $975 and $1,000. The beautiful La Marquise Coupé $1,600.

Write today for name of Paige dealer nearest you and our new 1912 Art Catalogue. The catalogue shows various models in beautiful colors and gives full details of Paige construction.

PAIGE-DETROIT MOTOR CAR CO.
265 Twenty-first Street Detroit, Michigan

her! He did. He adored her for the agony she caused—it was his proof that he could stand up to things like a man. It gave him a soul-satisfying, Daniel-in-the-lion's-den feeling to be there every day, waiting for the bite of her words—"Po-tatoes!" and "Oh—very well!"—and know he could meet them without a quivering of the flesh. He'd show her she couldn't hurt him anyway! And she—just a teacher—had turned up her nose at his father—just a dear, sweet little Jenny-Wren teacher! And she'd turned up her little Jenny-Wren nose at his father! Didn't he hate her, though, for that? What sort of a man would he be if he didn't? However, if she would call him dear just once more! And if she did call him dear just once more wouldn't he show her? Yes—he'd show her, all right, what she dassen't say to—a man. Nobody cared how he was suffering! Perhaps he'd better go live with the Indians or join the Mormons—his father hated Mormons; or maybe it would be easiest jest to go up in them rocks behind the schoolhouse an' give that ole growly wildcat one acrost the jaw in earnest. Then she'd feel sorry when they found him there with his insides all tore out an' scattered on the rocks—an' his heart et up, most likely—wildcats alwuz eat that part the fust-off. She'd faint—and she'd know then she'd done it herself, because she'd driven him to it with her everlasting "Po-tatoes!" and "Oh—very well!" She'd be a murderer all right, all right!

And so, while all the rest of us were daring all the rest of us to say the Forbidden Word to a McQueed, little Gilbert was soberly doing it every day of her life—and then going home and washing out her sin in secret tears for her dear victim.

What else could she do? Discipline must be maintained in any school; and how much more vital is it in a school where your front yard ends forty miles away and a hundred longhorns may decide any minute to go to school instead of going to blizzards, or a growly wildcat may hop on to your roof from your back-yard racks and spit at you down the stovepipe! Discipline there meant more than a chance to teach in peace—it meant life and death to eighteen little trusting pupils confided by Providence to a teacher's conscience. At least, Miss Geraldine looked at it that way.

With this state of affairs—with civil war loose in the land, only wanting a leader for the other side—Toddy saw he must get rid of Miss Gilbert or die in the attempt. The whole state was now too small for both of them; and being a woman she had to go—not Toddy, of course; men aren't expected to move out in a case like this. He owned his homestead, besides, and homesteaders don't go for teachers.

Still he couldn't just carry her off and dump her out of sight on the plains, or in the big reservoir by McGill's—she was much too popular. A little act of bravery like that—and he'd be glad to do it too—might spell a quick lynch for him. However, where there's a will there's a way; and by the same token, where's there no schoolhouse there's no teacher. So Toddy carried off the schoolhouse for her and dumped it on the plains.

Geraldine brought the news to the ranch herself Saturday morning early. I was at work at my desk in the front room when the clatter of hoofs and her loud "Hello" stopped at the door. I ran out to answer.

"Oh, have you got a camera? Haven't you got a camera? You have—I know you have; and I must have it right away!" she panted, swinging off her horse and seizing both my hands.

It was much like telling a mother you've got to have the baby; but she gave me time to get my wind back by rattling on as fast as her tongue could gallop: how she'd gone over to put her Monday's work on the blackboard—she was coming down to us for over Sunday—and how she saw Toddy, with a four-horse wagon-gear; and how the roof was already off and loaded; and the rest was going as fast as Toddy could get it on the gear.

"And I must have a camera—I must!" she cried. "This is simply too grandly good to lose!"

I agreed with her it was—no more or less than the opportunity of a lifetime; and she rode away with my camera on her saddle-horn.

. . . . . .

We developed the films that night and I made quick prints with my electric torch. Oh, they were immense! Log by log—almost—they showed the hall of learning

tegrating, moving off on Toddy's strong lders and piling up inchoately behind droopy horses hooked to a wagon-gear. the foundations he carefully obliter- ; and then—the school was gone! It —and was not. The magician's deed, vise the magician in his glum self- faction, unconscious of the glass eye the two bright ones peeking at him under the high sagebrush a quarter of ile away, came out of the developer dy perfect beneath our rapt and amused

Gee! Gee!" cried little Gilbert. It her near-swear, made of her own ini- ; and, with that, she up and gave a kiss. She was a kissful little thing. ways suspected it was part of her ılarity with the children that she ıght kisses were made to give away and ındered them even on dirty little faces. Oh, gee-e-e-e!" Then she irrelevantly ed: "Oh, poor Jim!" Though what Jim had to do with it I didn't see l she told me how he loved her—and she doted on him and admired and ected him too; and that he'd miss the ol and her more than all the goody- dies put together. I knew she was t. Boys are funny things!

he rode off with poor Jim very much in heart and our prints and films very h in her pocket; and in this frame mind—sadly glad—she galloped into ldy's ranch.

'oddy was cleaning a gun in the bunk- se. She swung off her horse and they hanged a "Good morning!"—not as a l social amenity, but with the affable ing of the cat that has eaten the canary. urred little Geraldine, feeling the ary warming her insides:

I was out taking photographs on urday. I thought you might like to them."

aid he, still easy on the canary:

I suppose y' wuz fortygriffin' some ers?"

he disposed of this with a pussy smile, narking, as she drew the pictures from pocket:

I thought maybe you might like to buy original films." A snort from Toddy. ere are the sample prints."

Another snort from Toddy; but he took prints to show her he bore no further ill lings—since he'd eaten her canary.

She says he turned the color of sudden rder first; then the color of death on the h sens—whatever those hues are—and n the color of a wax tombstone. He ked at the prints from one to fifteen, and m fifteen to one; from eight to fifteen, d then backward again to one. She looked t over the plains, golden calm, with a little ene white splotched here and there from recent snow-flurry; she saw three ante- pes running with a bunch of cattle and ought she couldn't—she just simply uldn't—give up her school now—and Jim!

Toddy spoke first.

"When'll y' deliver the goods?"

It came to her in a flash:

"As soon as the schoolhouse is back ere it was." Then her little heart pped and missed a beat.

"It'll be back thar—lemme see—tomorrer ght. Will that do y'?"

Her heart started up again like a hammer. as Toddy giving in? Was he trying to ake terms with her?—satisfy her?

Now the truth is, Toddy had given up! e was scared half out of his wits at what e'd done and what she was likely to do xt. He knew by this time precisely how e community felt about changing P's to 's on steers' sides, and what happened hen you got caught with the steer on u, so to speak—you got the pen in yoming. He could only give writhing esses, however, at how the county would el about the carrying off of the public hool; there was a dangerous lack of prec- lent in dealing with school-rustling—the ime is so very rare and the rule is: "When doubt shoot!" Toddy had helped to tablish the rule.

Said little Geraldine doubtfully:

"Y-es, I suppose that will do—if you n't get it there tonight." And she added veetly, seeing him shake his head: "It ill have to do if you positively can't."

"I'm 'fraid it'll hafta do. I—er—auled them there logs off about ten mile," e admitted; "an' mebbe I can't git her uite done in time fer school Wednesday."

He looked at her appealingly and she id it would be all right. Her amena- ility gave him courage to ask the price of he films; but when she said twenty-five dollars—I'd told her to stick out for that, no matter what—she says he died the deaths all over again.

"Twenty-five dollars—fer a fillum—that didn't cost more'n fifty cents!" he gurgled. "Twenty-five dollars—as much as fer a horse!"

"Twenty-five dollars," she repeated dryly, holding out her hand for the prints; "but, of course, Mr. McQueed, you're under no obligation to buy them. I was merely offering them to you—first."

She packed the word so full of subtle suggestions that Toddy couldn't help thinking: "I wonder what she means—an' who she's goin' to next!" She didn't tell him what she meant; instead, she took a step toward him with her hand out and said:

"Oh—very well! Only you can't say afterward I didn't offer you the—evidence. No harm's done, though, if you don't feel like paying what such pictures are worth, and your time's too valuable to spend arguing about a thing you don't want; so ——" she broke off and tried to take the prints away from him.

"Who says I don't want 'em?" he grumbled. "The price is a little mite steep when you compare 'em with cattle on the hoof; but then ——" He put the prints in his pocket.

"I'll take the money now," said the undaunted one.

He caught his own "Now!" just as it was jumping through his lips—at least, she shouldn't think he hadn't any money; and he fished out some bills of doubtful chastity, demanding suspiciously, before he gave them to her:

"How do I know y'll bring me them fillums? What guarantee air y' givin' me?"

The hauteur with which she drew herself up made her feel as tall as he was, though she barely reached his shoulder; and she answered proudly:

"Because I spell potatoes with a p!"

He put the bills in her hand without a word. I have always thought that prompt, silent act was Toddy's acknowledgment that there was, after all, something to people who held by the customs of an effete East.

"And one thing more, Mr. McQueed," she rippled at her sweetest: "after this, I wish Jim to spell potatoes right—and he will if you tell him to." She accompanied the "you" with an ingratiating smile; adding, with enthusiasm: "He's a splendid boy—about the brightest boy I ever taught!"

Her appreciation of his son finished Toddy's undoing.

"I'll l'arn Jim tonight to spell 'taters like the book!" he said grimly, "an' I'll l'arn him at the same time that what his teacher says goes in this here district!"

His mouth looked poor-hurt-child at her, but his eyes looked great-big-man; and, seeing that face just as she was taking her horse, she ran back, holding out her hand, to where he loomed in the bunkhouse door, stooping his great height under it.

"Oh, Mr. McQueed," she flashed tremulously, "I do just want to be friends with you and have you friends with me! Will you? And I'll prove it ——" She whipped out the bills he'd given her and the films, too, and thrust them into his hand. "There! I know you'll put the schoolhouse back—and I don't want your money anyway. I just want you to be friends with me—if you can."

Toddy crumpled the films into his pocket, but pushed the money back into her hand.

"No—I won't take it!" he told her. "Little girl, you air a dead-game sport, an' I'm proud to be yer friend; but the money's yourn—y' won it off me fair an' square, an' y' couldn't make me take it back!" Then he, too, drew himself up proudly and said: "Old Toddy McQueed can pay what he owes!"

She says he "looked simply too perfectly fine!" when he uttered those words, and she was afraid not to take it—she was nearly ready to cry over him; but, like a woman, all she could think of to say in this starlit moment was:

"And you'll teach Jim—won't you?"

"You leave all that to me," Toddy waved loftily. "I'll l'arn Jim ter spell 'taters right ef it uses up muh hull blacksnake t' do it! Only fust lemme see ef I got her right myself." And he painstakingly spelled out: "P-a—t-a—t-e-r-s—paytaters. Is that right?"

The minx smiled approval in his face and said:

"Yes—that's right!" And never batted an eye.

The Home Maker

Get Your Canadian Home *from the* Canadian Pacific

WHY FARM on high-priced, worn-out lands when the richest virgin soil is waiting for you in *Manitoba, Saskatchewan* and *Alberta*, the great Prairie Provinces of Western Canada? In many parts of the United States you have to spend as much money to fertilize an acre of your farm, as a fresh, rich, virgin acre will cost you in Western Canada. The first prize of $1000 for the best wheat in the world was awarded to a Western Canada farmer at the New York Land Show—farmers on our low-priced lands won first, second and third prizes for wheat in competition with the world.

Go where you too can prosper, where you will find perfect health, where you can earn a farm and a home in a few years' time at most—many farmers have paid for their farms with one crop—where it does not take a lifetime of drudgery to make a competence and where energetic efforts bring riches quickly.

Land from $10 to $30 an Acre
Ten Years in Which to Pay

The Canadian Pacific Railway Company offers you the finest irrigated and non-irrigated land along its lines at low figures, and on long terms of payment—lands adapted to grain growing, to poultry raising, dairying, mixed farming, and to cattle, hog, sheep and horse raising—in the Prairie Provinces of Manitoba, Saskatchewan and Alberta. Select your own land. Decide what kind of farming you want to follow, and let the Canadian Pacific Railway put you on the road to fortune. Magnificent soil, good climate, good markets, excellent schools, good government, all are awaiting you in Western Canada; and a great Railway Company whose interest it is to help you to succeed, is offering you the pick of the best. *The best land is being taken first.* Don't wait. Ask for our handsome illustrated books and maps, with full information, free. Write and investigate this great proposition today. Address

Why Reliable Auto Dealers Suggest the Warner FIRST

There is a logical reason for the Dealer urging you to pay the few dollars extra for a QUALITY Warner. It is important to you—and almost as important to him—that your speed indicator be Accurate, Reliable and Good.

When the dealer from whom you purchase your car insistently urges you to take a Warner in preference to any other speed indicator, please believe him sincere in his desire to serve you—

He is.

Take the trouble to investigate and you will find he can make a bigger margin of profit on several other speed indicators. The dealer's discount on the Warner is small by comparison.

But when he sells you a Warner he knows you will be pleased and satisfied, that you will not have a minute's trouble or bother with the instrument as long as you drive the car to which it is attached.

And because you are satisfied with the car and everything with it, you will naturally continue to be a *regular customer* of that dealer. For it is human nature to cling to those whose judgment is proved to be sound and whose recommendations are found to be sincere.

If you decide against the Warner you cannot justly blame the dealer if you are dissatisfied.

There are always those who confidingly look for real values on the bargain counter—who persist in believing that it is possible to secure more than they pay for—or deludedly imagine that a cheaply made and hurriedly-thrown-together speed indicator will prove "good enough."

These will naturally not care to pay for Warner QUALITY. But the dealer soon finds that such buyers *expect* Warner Accuracy, Reliability and Durability, notwithstanding. And if they don't get it he (the dealer) is blamed, especially if he has been unwise enough to make no protest when the inferior indicator was bought.

Every buyer of a Warner secures a perfected speed indicator.

We point with pride to the fact that the Warner (except in the way of refinements) is made exactly the same today as when first put on the market in 1904. It was not an experiment then—nor is it now.

The fact that other speed indicators are redesigned, remodeled, and even changed in principle from year to year—and that each year it is announced that "troubles experienced *last* year will not be found in *this year's* remodeled indicator," give the true idea of how reliable such speed indicators really are.

When you buy a speed indicator ask yourself this question:

"Shall I pay a few dollars more and secure a trouble-proof, perfected Warner which will give an accurate indication of speed and distance for ten or fifteen years at least—

—"Or shall I save a few dollars and become part of the experimental force of a speed indicator maker who is changing design every year in his search for something reliable and worth while?"

Then, remember this— The Warner guarantee means more than it says.

Such Warner Auto-Meters are repaired as needed (and the percentage is very, very small) and adjusted absolutely free of charge for a year from date of purchase—accidents and self-evident abuse excepted. It is not necessary to argue, quibble or threaten to get this service. IT IS YOUR RIGHT. Warner branches are located in all the larger cities for the convenience of motorists. This means that a Warner need never be out of commission for more than a day or two at most—no matter how severe the accident.

Users of the Warner Auto-Meters need not therefore suffer the inconvenience and delay which often occur when it is necessary to do business at a distance with the factory.

No car costing $1,000 or more is complete without a Warner Auto-Meter on it.

The choicest, highest-quality cars manufactured either have the Warner attached as regular equipment—or their makers recommend it through their dealers and agents as the speed indicator of even quality with their royally good cars.

But, when deciding on your new car, don't be satisfied with the salesman's assertion that his car is equipped with "A Speed Indicator." That means that it is NOT Warner-equipped. The maker who uses a Warner has nothing to excuse or apologize for. It is BEST and he knows it, so he takes pride in pointing to the Warner as a proof of the QUALITY POLICY which maintains throughout the entire car.

Even if you have to pay for it—don't be without a Quality Warner on your 1912 car.

WARNER AUTO-METER

"The Aristocrat of Speed Indicators"

The Warner can be secured through reputable Automobile dealers in any city or town in the United States. Warner branches are maintained in all the principal cities for the convenience of these dealers and their customers. Inquiry to Beloit or at our branches is invited for Warner literature.

Warner Instrument Co. Main Offices and Factory 1261 Wheeler Avenue Beloit, Wis.

NOTE TO DEALERS—When suggesting a speed indicator always recommend the Quality Warner *first*. Then if you finally have to sell something inferior because of price, your customer can't blame you for his dissatisfaction—he refused the Warner against your judgment. (175)

The illustration herewith represents the new style in clothes for young men—shorter coat, soft-roll lapels, narrower shoulders and sleeves; trousers also narrower.

The more advanced dressers everywhere will seek this fashion this year.

If you want to be abreast of the times and wear correct clothes, ask your clothier to show you the following Society Brand suit styles: The "Ritz-Carlton," the "Master," the "Student," the "Poole."

Every suit contains twenty-five practical features.

Society Brand Clothes are the clothes for the young man whose good taste rebels against frills and fancies on the one hand, and the too conservative effects on the other. He likes the style of Society Brand Clothes because it is smart and dressy—because it is "different, yet dignified."

The making of clothes is to us more than just a business. It is our life's work.

We take just as much pride in designing clothes as an artist takes in painting a masterpiece.

And it is because of this that Society Brand Clothes look a little better, fit a little better and *are* a little better than ordinary clothes.

Sold by the best clothiers.

The Car with a Conscience

The Hit of the Shows

IF you saw the Oakland line at the Shows—New York, Chicago, Philadelphia, Boston, Detroit, Pittsburg or elsewhere—you'll approve our claim. Oakland superiority in finish and construction caught the crowds, held them—and sold cars.

"You've got the car my people are looking for", our dealers said. These men, on the firing line, have their fingers constantly on the public pulse. They know what the people want.

We have built a luxurious, beautiful, strong car—rich in appearance and staunch in service—as comfortable as a morris chair and with power and speed for any emergency. To see the car is to want to get in it; to get in it is to want to ride in it, and to ride in it is to want to own it.

The name "Oakland" on an automobile has always been respected, for it has always stood for good motor cars, for serviceable cars—cars that can be depended upon at all times, designed with care, along safe and sane lines, and built by experienced men.

Price is no longer accepted in the automobile business as an absolute index of quality. In construction, workmanship, design and finish, the Oakland, with its enormous output, is the superior of other cars selling at a far greater price, chiefly because they are produced in smaller quantity.

Take the Oakland unit power plant, for instance; the motor, clutch and transmission are all in one housing, bolted rigidly to the frame, thereby preventing distortion, securing perfect alignment and delivering the maximum of power to the rear wheels.

The enclosed valves, guaranteeing cleanliness; the gradual but positive clutch engagement, the ideal spring suspension, are other features of mechanical construction, in which the Oakland is second to no car in the world.

A Luxurious, Beautiful, Strong Car—See It! Sit in It! Ride in It!

OUR 1912 LINE OF 30, 40, 45 H. P. MODELS—$1200 TO $3000

Model "45" Specifications

4-cylinder, 4½ x 5½-inch motor, unit power plant; 120-inch wheel base; Schebler carburetor; Bosch magneto; full floating rear axle; tires 36 x 4½-inch.

Model "40" Specifications

4-cylinder, 4½ x 4¾-inch motor, unit power plant; 112-inch wheel base; Schebler carburetor; Remy magneto, dual system; tires 34 x 4-inch.

Model "30" Specifications

4-cylinder, 4 x 4-inch motor; 106-inch wheel base; Schebler carburetor; Remy magneto; fin tube radiator; tires 34 x 3½-inch.

Oakland "Oriole" Runabout $1200. The smartest light car on the market; 30 H. P.; 4 x 4 motor; multiple disc clutch; 30 gallon gasoline tank.

Body Designs Model "45"

Limousine, model "45," 7-passenger	$3000
Touring Car, model "45," 7-passenger	$2100
Close Coupled Tourabout, model "45," 4-passenger	$2250

Body Designs Model "40"

Styleplus Clothes $17

The Same Price the World Over

WE have accomplished the production of Styleplus Clothes $17, by dealing straight from the shoulder with concrete facts and with nothing else.

In presenting Styleplus Clothes to the men of America we shall employ the same simple principle.

And so we have devoted none of this space to meaningless style pictures.

Styleplus Clothes $17 are the result of an intensely concentrated effort by the most highly specialized and the largest individual clothing factory in the world to produce a suit of clothes to retail at $20 that would surpass the best clothes being offered anywhere at that price—or perhaps at $25.

When we computed our costs, estimated probable sales, taking into account our tremendous buying power and manufacturing capacity, *we found that this suit of clothes could be retailed for $17.*

In analyzing our new product we found it to contain far better than the average fabrics found in $20 and even some $25 clothes—*plus* all the way through. Our designers, than whom there are none higher in their craft, had produced styles that, line on line, reflected the best thought of the season—*plus* all the way through. Our highly trained and efficient workmen had produced finish and fit that ranked with the $25 grades—*plus* all the way through again. Our experience, workmanship and fabrics guarantee better than the usual wear—service-*plus* all the way through.

And so this line came to be called Styleplus Clothes. It means

Style + Values
Style + Workmanship
Style + Fit
Style + Quality
Style + Materials
Style + Service

The production of Styleplus Clothes $17 is a new milestone in the progress of good clothes development in America. It is nothing short of a great victory. It is recognized as a wonderful accomplishment by all men who know anything about the making of clothes. It means more to the everyday man than anything that has ever before happened in the clothing world.

This accomplishment would not have been possible but for our 63 years of conscientious study and work. It would not have been possible but for the 50,000,000 suits and overcoats that we have made and sold. From every one of these 50,000,000 garments, we have learned something and this something is embodied in every suit of Styleplus Clothes.

This accomplishment would not have been possible but for our tremendous buying power, which gives us the first choice of the fabric market and often the whole output of a mill.

It would not have been possible but for our immense manufacturing facilities that insure superior tailoring, highly specialized skill and exact uniformity, the concentrated efforts of thousands of skilled workers and the entire organization of the largest individual clothing factory in the world.

It would not have been possible but for the fact that we employ and pay inviting salaries to the most proficient designers in the trade.

We guarantee Styleplus fabrics to be all wool or wool and silk, thoroughly shrunk, every Styleplus coat to be strictly hand-tailored, and guarantee the perfect wear of every Styleplus garment and a new suit where satisfactory wear is not realized.

Styleplus Clothes are so well made, of such superior materials that we can afford to make the following additional and unusual guarantee.

Style + Service *Whenever a purchaser of Styleplus Clothes finds a button gone, or loose, or a tear or in need of repairing, he can walk into the nearest Styleplus Store and this repairing (other than pressing) will be done for him free of charge.*

You should find a Styleplus agent near you. If you have any difficulty, write to Henry Sonneborn & Co., and we will send you a style folder, factory booklet and samples and see that your needs are supplied by the nearest Styleplus distributor. **Look for the label in the coat. Look for the guarantee in the pocket.**

HENRY SONNEBORN & CO., Baltimore, Md.

5130

Yes! $15 will really buy a blue serge suit that will fit and wear and hold its shape and color. Read about the new idea in clothes-making.

THIS will tell you about the best $15 blue serge suit we have ever made.

Don't measure its quality by the price. We can show you how and why this suit should rightly be compared only with clothes at much higher prices.

Read the reason. It's a new idea in clothes-making.

Last fall we proved that centering *definite* advertising upon one particular suit will largely increase the demand for it. It is well known that manufacturing in increased quantities lowers making-costs without cutting quality. The new idea is simply to work the two facts together, *estimating the savings in advance*, and putting them into *better cloth than we could otherwise afford to use.*

It might be called cashing-in the power of advertising before the advertising is done.

But it's more than a new idea. It's a *success.* We tried it out last fall—and our faith was rewarded by three times the business we had ever had on any suit at the price.

Having proved the idea, we've prepared for this season with even greater confidence. We've produced a $15 ready-to-wear blue serge suit that any man can feel well-dressed in, and be absolutely sure of service and satisfaction.

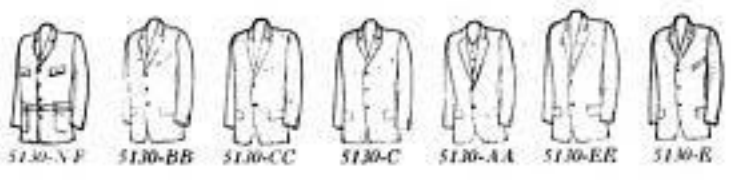
CLOTHCRAFT
Blue Serge Special
No. 5130 GUARANTEED ALL-WOOL AND FAST COLOR $15

When you examine the cloth you'll be favorably impressed by its soft, even twill and the deep, rich indigo dye that's guaranteed to be lasting.

Then you'll note the style in every line of the coat. Try it on, and you'll observe that no matter what size is handed you, the collar fits close at the back, and the coat-front hangs smooth.

No. 5130 is made in the seven styles shown below, for thrifty men and young men. Whichever style you choose, you can be sure of fashion absolutely correct for the coming spring and summer.

Now this Blue Serge Special is only one item in the Clothcraft line. Clothcraft Clothes are the one guaranteed all-wool line at medium prices—$10 to $25.



They're produced in clean, light shops, by Clothcraft Scientific Tailoring—the efficiency-methods by which we improve quality without increasing cost.

You can be sure of quality before you spend a cent. Clothcraft Clothes are *definitely* guaranteed in the following particulars—absolutely pure wool cloth; first-class trimmings and workmanship; permanent shape; satisfactory wear and service, with *you* as the final judge.

Go to The Clothcraft Store. See No. 5130 and other good Clothcraft Clothes. Examine them critically.

If your dealer doesn't sell Clothcraft, let us direct you to one who does. Write us today for the address of the nearest Clothcraft Store. With it we'll send you the Spring Style-Book and a sample of the 5130 serge.

Model 27—Five-Passenger Light Torpedo, $1,250. With Top and Windshield, $1,350.

The Elmore Valveless Motor Gives You More Continuous Power Than Other Engines

YOU'VE read a good deal about continuous power impulses in an automobile engine—what is known technically as continuous torque.

Of course it's easy to understand that the more the power impulses of the engine overlap, the smoother and more economically the car will run. And the less the power impulses overlap, the more jerky the car-movement will be, and the more fuel it will use.

Now, in the ordinary 4-cylinder engine, only every fourth stroke of the piston has power behind it. Out of sixteen piston-strokes making up one complete operation of the four cylinders, there are four power-strokes. That is far from continuous power-impulse and far from smooth-running.

Makers of six-cylinder cars have dwelt strongly on this fact, showing the greater overlap of power in a six-cylinder engine and the consequent greater smoothness of operation. And their argument is sound.

But in the six-cylinder engine it is still true that only every fourth impulse is a power-impulse—six in all to each complete operation of the engine.

In the Elmore valveless motor, every other impulse is a power impulse—eight power-impulses out of every complete operation of the engine.

In other words, a four-cylinder Elmore Valveless Motor will develop more continuous power than any six-cylinder poppet-valve engine, with consequent greater ease and efficiency.

What Valveless Construction Means To You

Valve troubles cause ninety per cent of motor-car inefficiency. There are from 20 to 40 small parts on each valve of the ordinary engine—or from 80 to 160 parts on 4 cylinders. Unless all these parts work in almost perfect co-ordination—within a small fraction of a second—the cylinder begins to miss fire and ultimately stops altogether. Valve adjustments and repairs make up a large portion of upkeep expense—every motorist knows it. But the Elmore owner never has such items to pay, nor such annoyances to meet.

The One Proven Successful Valveless Motor

The Elmore motor has been in successful operation over American roads for over a dozen years. There are thousands of Elmore owners, everywhere. And any one of them will tell you that for economy, efficiency and ease of operation the Elmore is in a class of its own. But it is well to remember that the Elmore alone can show such a long record and service; and the features which make the Elmore valveless construction valuable are patented and exclusive.

A Model for Every Motoring Need

Whatever your desire in the way of a car, there is an Elmore which will meet your utmost requirements. We use the best materials, the highest grade of workmanship obtainable. In fact, Elmore construction is a synonym for quality in the industry.

And the price range—$1050 to $1650—is most conservative.

Write for interesting free booklet and we'll tell you where to see the car.

The smooth, clean-cutting, slanting stroke of the old-fashioned, straight razor, plus the guarded blade features of all safety razors—that is what we offer you in the

Young Any-Angle Razor

Don't mistake this announcement, you men who have tried them all and found them all safe enough, but—

The Young isn't "just another safety." It's safe, it's simple, it's compact; its shape is the shape you are used to; its blades hold their fine, cutting edges beyond what you have been led to expect. But the dominating appeal of the Young is its *any angle* feature—the feature that gives you—any man, the old timer or the beginner—that slanting stroke which is absolutely essential for a perfect shave.

There is nothing to learn. The barber's skill is in the Young. A touch turns the blade at any desired angle and you shave as with any safety razor. The Young is finality in razors. You'll come to it sooner or later. Do not defer your shaving comfort and satisfaction!

Free 30 Day Trial

All dealers are authorized by us to take back the Young Any-Angle Razor and refund the purchase price, if after using it for thirty days you wish to return it. If your dealer cannot supply you, order from us, with same return privilege. The price of the Young Any-Angle Razor, including 12 keen blades, with genuine leather case is **$3.00**

We Make Them for All Kinds of Business. Prices $20 to $765

All sorts of stores, factories, garages, dining cars, county and city offices, commissaries, public service offices, hotels, theatres and newspaper offices are included in the list. They are used in the largest stores and on the smallest corner stands

They are used in the store farthest North and the store farthest South.

Certain kinds are made especially for department stores, railroads and banks. They give quick service and protection and do things no other machine sold can do.

Our office registers certify and classify accounts and records. They give the most positive checks for bookkeepers, auditors and managers. No other machines sold give so much information and protection with as little work and in so short a time.

We have spent 30 years in studying the needs of all businesses where money is handled and records kept. We make cash registers to fit every need and that is why we make over 300 styles and sizes.

Our registers safeguard all transactions occurring between employes and customers. They save time, work and worry and insure to proprietors all their profits.

They cost so little and do so much.

Write or call and have the kind of register suitable for your business explained to you. Investigation will cost you nothing.

We have a representative in your vicinity.

DRAW YOUR OWN CONCLUSIONS

It's just a short time ago that we were impressing on the motor-car buyer the merits of the R-C-H. Today, so tremendous has been the country-wide appreciation of the wonderful R-C-H value, that we are forced to come to you with another message: "Speak quickly if you want one."

No other car in the history of the industry has ever approached the record made by the R-C-H. A few short months ago the R-C-H embodied a personality, a factory and a car-name. Today we have cash deposits on thousands more cars than were ever sold by any other organization during its first year. And every day dealers are writing, wiring, telephoning—imploring us to increase their allotments.

Frankly, we underestimated the wide-awakeness of the average buyer. Of course we realized that a car with R-C-H construction and equipment would be a big seller at the R-C-H price. But where we figured in thousands, we find a demand for tens of thousands.

Many of our friends—more's the pity—will be disappointed. And so we want to impress upon you again the necessity for prompt action. Get in touch with your nearest R-C-H branch or dealer at once. For if you can't get an R-C-H, and want a car as good, you'll pay a thousand dollars more.

A Car That is Cheap Only in Price

That's the one fact we want to impress upon you. And we ask nothing more than your own judgment after you've seen the R-C-H for yourself—after you've made your own comparisons with other cars at double the price.

It's hardly necessary now for us to go into construction and equipment details—the R-C-H has been the sensation of half a dozen shows and the country is ringing with its merit.

But there are a few facts that will bear emphasis, even now.

The First Real Long-Stroke Motor

Some American designers have tried to achieve the much-desired long-stroke effect of the best European engines by lengthening the stroke and widening the bore in proportion. That is about the same in principle as trying to make a thin man by doubling the height and width of a short, stout one.

The R-C-H has the first adaption in this country of the long-stroke idea so successful abroad. A study of the best European models and thorough engineering tests determined its dimensions (3¼ x 5). Of course, with the public demand for this type of motor, the selling arguments of some manufacturers will eventually resolve themselves into: "My motor is longer-stroke than any other." But it is well to remember that it is readily possible to overshoot the mark; and that the bore-stroke ratio of the R-C-H motor has been proven to produce the maximum of power efficiency per fuel unit.

Left-Side Drive With Center Control

Any other than a left-side drive is not natural under American road rules. It is a wonder that American motorists tolerated a right-side drive for so many years; a greater wonder that American manufacturers retained it.

The drive on the R-C-H is left side; the control is center lever—out of the way, yet convenient to the operator's right hand.

The body is the graceful, roomy English type, recently made a feature of a few of the highest-priced American cars.

Greater accessibility; greater interchangeability due to the extensive use of drop forgings; ideal spring arrangement; perfect braking system—there are dozens of R-C-H features that must be seen to be appreciated.

Let us show them to you.

General R-C-H Specifications

Motor—4 cylinders, cast en bloc—3¼-inch bore, 5-inch stroke. Two-bearing crank shaft. Timing gears and valves enclosed. Three-point suspension. **Drive**—Left side. Irreversible worm gear, 16-inch wheel. **Control**—Center lever operated through H plate, integral with universal joint housing just below. **Springs**—Front, semi-elliptic; rear, full-elliptic and mounted on swivel seats. **Frame**—Pressed steel channel. **Axles**—Front, I-Beam, drop-forged; rear, semi-floating type. **Body**—English type, extra wide front seats. **Wheelbase**—110 inches. Full equipment quoted above.
